1. I can hear others, but they can't hear me

Newsgroup: rec.radio.amateur.equipment
Date: 2003-01-01 00:06:13 UTC
From: Eric Patterson <ericp@teleport.com>
Message-ID: <VhqQ9.6060$134.628048@newsread1.prod.itd.earthlink.net>
Source record: 35034

Hi all, I have a Kenwood TS850s/AT with a G5 RV. I can hear people ok.
However, when I try to transmit to someone else, they can't seem to hear me.
I have tried both on 20 and 17 meters. I am suspecting that there is a
problem because I would try to answer a CQ message and they would just keep
calling CQ like my signal is not getting out. The automatic tuner seems to
be working ok. The question is:
there something that I can check for on my radio or my antenna that might
indicate a problem? I have been making all my contacts from Medford,
Oregon. Could it be a problem with the antenna or the radio or is it just
the band conditions? Thanks in advance for any recommendations.

Eric Patterson, Kb7vfr.

Is the microphone modulating? Does the Tx power output meter move when you talk? Also, you need to dig up an SWR meter and check your transmitter output power along with antenna SWR. Additionally, I'd telephone a local ham, (there's lots in Medford), and ask him to listen to the signal while you are talking.

Sorry Mr. Hambrecht. I said what I did tongue-in-cheek.
Although I believe a plausible case for my statement can be
made, I nonetheless don't think anyone can rule out the
possibility of a historical Jesus.

Hope you are enjoying the holidays!

> around.

Even Dr Scott admits that the Bible is so watered down that it makes
pablum look like a Mexican feast. The Santa claus story is a perfect
example of how the story of a real person, Bishop Nicolas of Myra in
Turkey, (d)evolved into St Nicolas and eventually Santa Claus, and
eventually got mixed up w/25 Dec. rather than 6 Dec. commemorating his
death, since Father Xmas evolved out of Saturn for Saturnalia, and he got
confused w/Santa Claus.

I wonder how many of the "I must test it first" customers actually buy
the radio they tried. I suspect most insist on a "new" radio rather than
the one they tested. Which reinforces the comment that all you can
really tell is the look and feel, you can still end up with a lemon.

Obviously the antenna and feedline are working or you wouldn't hear
anything.
If the tuner is working it would appear to indicate that the tx is
providing output. Are you on the right mode? Are you sure you are not
operating split frequency?

Did it work before for you? Are you a new owner of a used rig? Does you
power supply have sufficient output? How about the possibility that the
tx has been disabled in the menu?

The 850 has lots of tx metering - does it indicate any power output on
TX? What is the SWR showing? Those two alone should give you lots of
clues.

The automatic tuner in the TS850S cannot tune a G5RV fed with ladder line.
Is he using an outboard tuner? If not, his SWR is on the order of 20/1 and
he won't be getting any power out.

Typically, a g5rv has about 30 feet of ladder line, a choke balun, and coax to
the station. Should be tunable, within the swr range of the auto tuner.

I just posted a scan of an old picture I found in my
late father's stuff of what looks like a pre war ham
station. Not my father's as he didn't get a ham license
until 1972. But my father did mention about being in
a civil defense communications corps in New York
City during WW2. But I see QSL cards on the
wall behind the rack. Is most of this equipment
homebrew? Maybe the box on the table is
a commercially made receiver?

17 vintage Panel Meters all in like new condition, some are new-all were tested and have been stored in double wrapped cellophane or boxed. Model numbers and type are marked on all the meters. Scales are all numbered and easy to read. All are bakelite cases and glass fronts. Most were obtained from Western Electric stock used for AT&T/Western Electric transmission and communication projects in the WWII era to the 50s. All are 3 1/2" circular diameter panel meters with a couple of exceptions. Here is the list: GE RF Amperes Meter 0 to 20 amps .5 amps/div non linear scale, Tipptronic Inc. Meter Relay 0 to 20 DC micro amps .5 microamps/division, Western Electric Volts DC Meter 0 to 500 volts DC 10vdc/division, Weston Milliammeter DC 0 to 100 ma 5ma/div, Weston Milliamperes DC 2 Scales 0 to 100ma and 0 to 10 ma with 1ma/div and .2ma/div respectively, Weston Milliamperes DC 0 to 300ma 5ma/div, Weston Volts DC 0to 500 VDC 10vdc/div, Modutech DC Microamperes 0 to 200 microamps 5microamps/div case is rectangular 3"X21/8", Marion Electrical Instrument Co. Needle center scale upper scale plus or minus 115 VDC and lower scale S<BIAS>M Plus or Minus 100 milliamps meter glass face is convex, Westinghouse DC Milliamperes 0 to 800 ma 20ma/div Front Bakelite case engraved "NBC 217 LAB", Marion DC Microamperes 0 to 50 microamperes 1 microamp/div, Weston Milliamperes DC 0 to 25 ma 1ma/div, Western Electric Microamperes DC 0 to 50 microamperes 1 microamp/div, Modutech Intelectron DC Milliamp 0 to 25 ma 1ma/div circular meter mounted in rectangular 3" X 2 1/8" 1 3/8" diam. meter, DeJUR PACO Microamperes meter 0 to 500 microamps DC 20 microamps/div 1 3/8" diam meter mounted in 1 3/4" square frame, Weston milliamperes DC 0 to 50 ma 1 ma/div, Simpson Meter Relay M85 Relay 200 to 500 ma DC 25ma/div new in its original box. Please email me if you have any interest in these meters or any particular one. All reasonable offers will be considered. Thanks and 73s, Don WA1TVH dpelrine@c4.net

Hello!

I am looking for a DRU2 Recording Unit for my TS850.

I do not have any experience with the DRU2, so I did like to hear your opinion.

Are there any experiences out there? Is the thing worth the money or should I look for an external solution instead?

Thanks and 73

I assumed it was something like that. The original use was probably for a large laser printer and I believe there can be some rather high surface voltages present. Why is there a vibrating sensor in the probe?

I cannot think of any reasonable use for it (and I have so much "stuff" tucked away at home that I hesitate to add any more). I'll probably return it to the trash bin.

Thanks,

Bill

Ext. battery pack for Yaesu vx5r

I want to build a battery pack for my vx5r, but need to clarify something
before go ahead.

Q1. will ext battery damage the vx5r if I connect the battery pack for
several hours and with 50% time of signal transmission ?
Q2. what is best voltage supply(e.g. 6/12v from lead-acid type or
7.2/9.6v from series of 1.2v cell) to vx5r ?
Q3. which type is the better, lead-acid or NiCd/NiMh cell ?

Tks

Unfortunately, Yaesu hasn't made the protocol publicly available to my knowledge. My guess is that it's a raw memory dump from one radio to the other and would require a fair amount of reverse engineering, plus level conversion between the rig and PC, which is trivial.

In my earlier post, I mentioned that neither Yaesu itself, or RT
Software, which writes many similar programs for multiple brands of
radio, has anything available. If neither of those sources has it, it
is probably not sold anywhere.

There's always DIY, but not a trivial issue.

Happy trails,

I want to trade for wide band recievers and a radio capable of working 6998 KHZ ....

The wide band reciever is for my brother (national guard soildier that was actived ...) I want a Broadcast band AM/FM and Shortwave radio that he can listen to for music and news (good moral booster) pocket size and rugged.

I also want a radio so that I can get into mars (I am KB9YMX) the radio needs to work on 6998(khz ?) so that my app will be approved.

I have tons of computer equipment, a ocilliscope a few mobile ANT. scanners and coax. The computers amount to several (6) cases with motherboards from 486 thru pentium III. I also have boxes of add-ons for computers ... sound cards to network cards to even a TV tuner card.... please contact me with what you got and what you would like to see if we can work something out.

I just posted a scan of an old picture I found in my
late father's stuff of what looks like a pre war ham
station. Not my father's as he didn't get a ham license
until 1972. But my father did mention about being in
a civil defense communications corps in New York
City during WW2. But I see QSL cards on the
wall behind the rack. Is most of this equipment
homebrew? Maybe the box on the table is
a commercially made receiver?

I'm running an IC-2KL on 120 volts. Its driven by an IC-756pro and I also have the AT500 tuner. I find that I get 500 watts peak on 80 meters. I don't operate 160 but on the other bands (15 thru 40) I can only get about 300 watts peak on SSB. I also notice that on those bands the 756pro is only showing about 15 to 20 watts peak on the power meter. If I put the amp in standby the transceiver goes right up to 100 watts peak.

I've checked the ALC and it seems to be set properly. I've also observed that my SWR appears to be ok on my meter. (between the amp and the tuner).

Does the amp have a problem? I'm open to suggestions as to what to do next as I'd like to get a bit more power on all bands.

One more thing. I had the station apart and prior to that I was also getting about 500 watts on 15. Since I reassembled it I am only getting 300.

Any help greatly appreciated!

Steve

Source record: 34995

It sounds like it could be a mismatch between your hf rig and your amp. Your antenna swr must be ok, if your hf rig will provide full power output without the amp. Once you turn on the amp, it appears that a mismatch occurs, and your hf rig automatically cuts back on its power output. This is the likely reason why the amp isn't putting out full power, as it isn't being driven with enough input.

First thing I would check is the jumper between the amp and the hf rig. Are you using the same jumper as before? Sometimes a different length jumper will cure a problem like this.

I hope these ideas help.

Sounds like a mismatch between the pro and the Ic2KL, but thats pretty hard to create!! hi.....The pro will tend to fold back and drop power under the LEAST critcal circumstances...doesn take much to make it "disagree" with the amp and drop power....Id say that is whats happening. Why? dunno. but try this......Get a dummy load or resonant antenna, turn the AT 500 off, put the exciter in fm and start bring up the power til it gets to 500 or 600 watts...then check the other bands, if they drop off , turn on your tuner in the pro and see if that brings it up...IF it does, you may have a problem in the input of the amp....thats my suggestion of where to start.....that and change the length of the coax between the PRO and the IC2KL...good luck, they work great, I love mine!!! 73 Murray K5MDM

68. Programming sofware (RT Systems) for Icom IC-T2H

Newsgroup: rec.radio.amateur.equipment
Date: 2003-01-03 19:22:20 UTC
From: fluffy96@earthlink.net
Message-ID: <5652fcfa.0301031122.76158200@posting.google.com>
Source record: 34800

Does anyone have a copy of the RT Systems v. 2.01 Cloning software for the IC-T2H?
I have contacted RT Systems a number of times due to a "Print" problem with the software, but the newer versions they sent created more problems than they solved. I am now not able to access any of the *.icf files I created for different parts of the country. Plus, their instructions had me overwrite my existing v. 2.01, so I don't have it any more. Every time I call RT Systems, which I have been doing about once a week since November, they are very nice, but end up sending me the v 2.02 software, which doesn't help. If anyone has any ideas, please e-mail me: fluffy96@earthlink.net

Stephen, turn ON the automatic antenna tuner in the 756 and see what happens.

If you have a SWR >1.7 :1 between the 756 and the amplifier the 756 may be automatically powering down.

Sorry to get off the subject a bit, but I see reference to the length of the coax from the exciter to the amp.... I admit my ignorance, and must ask, what length should it be, or should it not be?

Maybe I am doing something wrong here... would like to know what to do so that I do it right.

Thanks

If there is a mismatch at the amplifier, then keeping the
interconnecting cable short, example less than 0.1 wavelength, then the
impact of any impedance transformation in the transmission line is not
so severe. It is best to adjust the tuning on the input circuits of the
amplifier to achieve a VSWR of 1:1 !!

At my station the coax is less than 3 feet between exciter and my
amplifier, AL80B.

Stahr wrote:

>>help would be greatly appreciated. de AL7AW.

The pot you're looking for is R100, on the "main" board. That's the one under the top cover. If you look down on the board with the front panel toward you, R100 is about in the middle of the right half of the board. Slightly farther toward the rear and at the right edge of the board is R89, which is labeled as "70% deviation adjustment". My copy of the service manual doesn't really mention adjusting this control, but I think it's sort of a "mic gain", while R100 sets the maximum deviation.

If you need more information email me (noting the anti-spam address).

82. Question about the AL-80A

Newsgroup: rec.radio.amateur.equipment
Date: 2003-01-04 09:52:35 UTC
From: dj <dalej2@mac.remove.this.com>
Message-ID: <dalej2-AEB182.03524204012003@apollo-ge0.rdc-kc.rr.com>
Source record: 34813

Does anyone know if there are any differences between early model
AL-80A (SN below 500) and later model AL-80A,
I had understood they did not include inrush protection on the earlier
models below SN 500, not sure if that's true or not.

Note: I'm not talking at all about the AL-80 or AL-80B, just the AL-80A

Thanks for any help

Dale j.

P.S. I tried the AMPs reflector but no one down there seems to know
which is kind of suprising as some of those guys seem to know everything
else.

If your PC is also doing other things, it may have delays which hang
the data transfer.

Have you tried shutting down everything else?

Also, if your disk is near full, files may be fragmented. You may also
want to do a defrag on your system.

Happy trails,

84. Yaesu Ft-100 Transmit Inhibit on 80 & 160

Newsgroup: rec.radio.amateur.equipment
Date: 2003-01-04 14:52:20 UTC
From: Lee Murrah <lee@murrah.com>
Message-ID: <l8-cnReQa-RCaYujXTWcpw@giganews.com>
Source record: 34816

I finally installed an antenna suitable for 80 (and maybe 160 with a coupler). My FT-100D, which operates fine on all other bands, outputs nothing on those bands and shows the transmit inhibit icon. According to the icon page, that means that the selected frequency is invalid. Can anyone advise me how to fix this problem?

Lee

I read that on the FT100 FAQ page the other day. There is a menu setting where you select the type of antenna. You probably have it set for the ATAST100 which doesn't do 80 and 160M therefore the FT100 disables those bands with that setting.

From: Mike Hagerty <mhagerty@mako.com>
Message-ID: <Z8FR9.722$j22.645294@newsfeed.slurp.net>
Source record: 34825

Greetings to all. I have a Marantz 2500 that just quit working yesterday. There is no power to the speakers. The relays click 5 seconds after power on, all lamps, indicators, cooling fans and CRT "O-scope" are working. The CRT displays a source signal or tuner signal input and all CRT tuning modes work. There are 10 fuses and 2 relays I can see and all are showing good. There is no detectable sound from the speaker output, no scratching, clicking, hissing, popping or humming, nothing from either channel. I am guessing that a relay is stuck open or has bad contacts. I just seems that all of the banks of drivers would not all go out at the same time. Does anybody out there have any thoughts or schematics or ideas?
Thanks in advance for your time and consideration.
Mike H.

Good Day all,

What happens to old cell phones? They seem to be throw away devices, even tho they still work after the contract runs out. These days 2 years of use makes the phone ancient and worthless, regardless of whether it still works or not.

But these things are full of good rf parts sensitive 800 mhz receivers that can be put on 900 mhz ham bands and 3 watt transmitters that can run cw or fm---since the receiver and the transmitter have to run in close proximity to each other (and in full duplex), their LO's and transmitter spectral output has to be squeaky clean. Of course, there is a duplexer and the thing is loaded with top quality UHF rf components. Some of them have 'test modes' which allows the user to tune and transmit and manually control the frequencies from the keypad.

Anyway, I never see service manuals or other technical information for these things and a one year old cellphone goes for 20 bucks or less on ebay these days! 2 year old cell phones go for 3 for 20 bucks or so..

Has anyone hacked into these and published any information on using them for alternative purposes???? Or gaining control of these things in service mode? Does anyone deal in Service Manuals for these things??

Email me or post reply here.

Have a great day.

96. Old SWR Meter - Hughs Aircraft

Newsgroup: rec.radio.amateur.equipment
Date: 2003-01-04 18:23:14 UTC
From: Whoever Wherever <jgajmears@email.msn.com>
Message-ID: <#uHPX6BtCHA.1644@cpimsnntpa03>
Source record: 34828

I have just come into possession of a Model 415B Standing Wave Indicator made by Hewlett-Packard Co. in Palo Alto, Ca. It has a low serial number and was used by the US Army Signal Corps. It has a combination old ID tag on it with the Signal Corp. and Hugh Aircraft Co. There is also an old tag glued on that has USA 05. It looks to be in good shape from the outside. The finish is the old grayish brown that is metalized. The fuse is missing out of the back so can not plug it in and see if the tubes light up. The meter on the front is about 3x4 inches with Hewlett hp Packard on it and also square law detector. The ranges are for SWR, Expanded SWR, DB, and expanded DB. It has a 1/4" female plug for BOLO. Current. There is a three position switch. One for BOLO/200ohm, one for CRYSTAL/200ohm and one for CRYSTAL200Kohm. It has a wire flipdown bail in the front for tilting and has a leather handle on the top for carrying.

Does anyone have any history on this type of equipment? What and where it would have been used for? I'm guessing it was used on aircraft from the old Hughs ID sticker. I'm guessing it's from sometime in the 50's, maybe earlier. Would it still be good for anything today or use to anyone?

Looks like the original owner of this unit never used the PL259 connections
for antenna's.

I have just connected a random length of wire to one of the balanced
terminals and my RF earth to the other and tuned it and worked a SV2 on 10
watts.

So it must be the way that the PL259 connections have been connected.

Thanks to everyone for their help.

Neil.

> John Mears

Hughes Aircraft Company, contrary to it's name, had little to nothing to
do with aircraft. The closest thing to an aircraft HAC made was various
missiles, i.e. TOW, Maverick, etc.

They were, and what's left of the company still is, primarily a manufacturer
of electronic equipment and systems. Raytheon purchased the majority of
HAC about 10 years ago.

The HP 415 series was around for a long time, the latest I believe is the
415E, but I don't think they date back as far as the 50's.

This was probably a piece of general purpose test equipment used in the
manufacture and test of some system for the Army, hence the Army sticker.

Our church collects them for an outfit that programs them so that
they only call 911 or *55, and then donates them to battered womens'
shelters for distribution. This is A Good Thing.

HP test and measurement Company is now Aligent Technologies -- but HP built thousands of these units -- used by design labs, calibration labs and production testing as well as other areas. They were high end laboratory test equipment for industry. So lots of them out there and not a collectable or of any great value. Unless you have serial 00001.

Example: There is a 415E model at E-Bay -- currently $25 with no takers -- so not particularly of value. New the 415E sold for $1050.00

The 415 series are SWR meters (standing wave ratio) designed for use with square-law detectors to determine SWR and attenuation. Also used with bolometers (and if missing makes it worth much less)
To see how they are used -- see URL for a typical test setup
http://www.valcom-ottawa.com/Guelph/products/pdfdownloads/as3226%20manual.pdf

The 415E models are in the HP 1981 catalog. So the B models probably go back to the 60's

Hughes is a large aerospace company and this was probably used in their labs or production areas -- not aircraft.

You can E-Bay it but you need to know if it is working or just list as is.

Manual available at URL:
http://orbita.starmedia.com/~manuais/H.htm

news:#1lIJ2BtCHA.2148@cpimsnntpa03...
I have just come into possession of a Model 415B Standing Wave Indicator made by Hewlett-Packard Co. in Palo Alto, Ca. It has a low serial number and was used by the US Army Signal Corps. It has a combination old ID tag on it with the Signal Corp. and Hugh Aircraft Co. There is also an old tag glued on that has USA 05. It looks to be in good shape from the outside. The finish is the old grayish brown that is metalized. The fuse is missing out of the back so can not plug it in and see if the tubes light up. The meter on the front is about 3x4 inches with Hewlett hp Packard on it and also square law detector. The ranges are for SWR, Expanded SWR, DB, and expanded DB. It has a 1/4" female plug for BOLO. Current. There is a three position switch. One for BOLO/200ohm, one for CRYSTAL/200ohm and one for CRYSTAL200Kohm. It has a wire flipdown bail in the front for tilting and has a leather handle on the top for carrying.

Does anyone have any history on this type of equipment? What and where it would have been used for? I'm guessing it was used on aircraft from the old Hughs ID sticker. I'm guessing it's from sometime in the 50's, maybe earlier. Would it still be good for anything today or

use to anyone?

Floating about on the Internet is a document called Motorola.txt, a
120K FAQ that has a lot of info on the older Motorola flip phones and
similar from the late 90's A google search should soon find it.

Close. In the early 80's GM sold all of Hughes Aircraft except the
satellite businesses to Raytheon. Last year, GM sold the satellite
manufacturing business to Boeing. GM Hughes Electronics is now
composed primarily of DirecTV, Hughes Network Services, and PanAmSat.

There has always been a close relationship between Hughes and HP.
Puckett (Hughes) and Packard were friends.

Not quite.

GM bought HAC in the late 80's; I was there for that and you could see
the handwritting on the wall.

Raytheon bought HAC in the early 90's just after I left though I did go
back as a consult to work on "The Great Divide" as they called it.

Maybe in your opinion but my QCP-2700 is about 5 years old and still
works. I see NO reason to pitch it until it quits. Personally I
don't like any of the current models. They are all too small and
would be hard to use. Not sure what I would get if this one quits.

It may be there's not much market for the manuals, as the repairs will
likely cost near or more than what the phone's worth.

This is likely caused my the membrane that is between the mike and the mike opening (to insure that the radio is waterproof) I believe there is a way to increase the modulation, but othere have opened up the radio and removed the membrane (I just hope they tell anyone why buys the radio that it is no longer waterproof)

Answered my own question.. and figured out what that weird icon was as
the same time..

It's the internet connection feature....

I must have failed to hit the F(unction) key once while trying to change
the power level...

Got to love these new radios where every key has 12 uses.

- jim

Not very exciting, but you can salvage a pager motor out of
most of them. They also have a very accurate temperature-compensated
oscillator.

Best regards,

Is a tube's specified plate dissipation figure a
strict maximum limit that should never be exceeded, or a
limit on average dissipation over some set period of
time. Example: If a tube has a 100W plate dissipation
specification, could one theoretically transmit CW at a 50%
duty cycle, where the power being dissipated by the tube is
200W during key down and zero during keyup w/o exceeding
the tube's rating?

(If the latter, what sort of maximum period could one
use for averaging?)

But they are also a source of other interesting radio parts. IF filters, usually at exotically high frequencies (and crystals that convert those IFs to 455KHz, complete FM IF strips for that matter, frequency prescalers, diode double balanced mixers, synthesizer ICs of various kinds, sometimes interesting RF transistors, and sundry other parts. For that matter, I have more than enough NE570 companders because I've stripped cellphones. Except that they are often oddly shaped, cellphones supply nice metal cases.

Of course, I'm referring to older and bulkier phones, when the components were nice and big, and just as important standard and not too integrated. I've bought them for fifty cents to five dollars (I think that's my limit) at garage and rummage sales, and if it's old and bulky and you want RF parts they are worth the money.

I can't say the same thing for more recent ones. Certainly hand held cellphones yield increasingly fewer parts. I got a recent one for fifty cents, and there was virtually nothing that I could recognize inside. Another one at least had a recognizable first IF filter.

It is, for CW, AM, & FM.
On SSB the max plate diss. can be safely exceeded by a factor of 1.5, but
only if the power supply can handle it.

129. Help with microphone for an HT

Newsgroup: rec.radio.amateur.equipment
Date: 2003-01-05 04:12:07 UTC
From: "Bruce W.1" <bw1@NOSPAMcore.com>
Message-ID: <3E17B093.DE24A7EF@NOSPAMcore.com>
Source record: 34911

I'm trying to make a Radio Shack 19-310 speaker/microphone work with a Uniden GMR-100 GMRS HT. The mike keys transmit okay but the audio is not right. The sound level is too low and it crackles.

Why would I torture myself with this effort you ask? Because the original microphones (GMR107) for this HT are no longer available, nor are their schematics. Also I have a couple Radio Shack 19-310 speaker/microphones hanging around.

Here's a circuit diagram I made for the Radio Shack 19-310 speaker/microphone:
http://users.adelphia.net/~ae-explorer/RS19-310.jpg

Can anyone recommend a modification to the speaker/microphone?

Thanks for your help.

Group,

I just got a pair of Uniden GMRS 2 watt radios.
I am getting extremely poor reception on relatively flat ground - like 1/4 mile.
Can this be so poor?

Anybody with GMRS radios that gets maybe a couple of miles for normal suburban usage?

TIA...Scott

I am GMRS Licensed (as you are supposed to be to operate there),
I generally get at 2 watts a maximum of 1 mile that is intelligible. It
does
seem possible that at times, like any propogation cirmcumstances on any
band that maybe I can get up to a mile and a half with 2 watts. We have
two GMRS repeaters in our area, one on the .675 pairing and one on the
.600 pairing and most of the folks who use those machines are smarter than
I am and are now using motorolla commercial equipment and digitally toning
them out.

137. Fluke 85RF probe -- what is it?

Newsgroup: rec.radio.amateur.equipment
Date: 2003-01-05 15:04:39 UTC
From: cprstn54zz@att.net
Message-ID: <3e1845c8.151664375@news-server.optonline.net>
Source record: 34919

I am looking for an RF probe to use in the HF range with my Radio
Shack frequency counter (BNC connector) and also with my OHR DD-1.
See: http://www.ohr.com/dd1.htm

I was able to get OK readings with a 10X oscilloscope probe on the RS
item.

I picked up a $99 Fluke 85RF on eBay cheap. It has a more impressive
coax cable than the oscilloscope probes and is said by Fluke to be a
"high frequency" probe rated for 500 MHz. Compare this to
oscilloscope probes many of which which are usually rated 50Mhz.

However, when I hook up the 85RF, I get false readings. 7.000 MHz
shows up as 5.1 MHz on the RS.

Fluke gives no specs for the 85RF on its web site, instead saying to
contact them if you want more info. Then they ignore your emails!

Does anyone know what is inside the 85RF and what I need to do -- if
anything -- to make it work as an HF probe?

Source record: 34920

My observation are as follows:

In General, most Ham Radio stores I visit have personalities for example;

R&L Electronics Hamilton OH
- Caters to blue collar people, Hamilton is an old industrial town
- Competeive prices on new equipment,
- Over priced used in some cases, however this works to yoou advantage if trading in.
- Cramped store and usually crowded
- Staff friendly and those that are not usually do not stay long.

Universial, Reynoldsbur OH
- Caters to white collar, Columbus especially Pickerington area were it is located is upscale.
- Competative with big city stores like HRO and AES.
- Over priced used.
- Clean bright store with lots of room, thus higher over head. Not as crowded.
- Staff generally in different and not quick to wait on people they do not know well.
This especially true if one is percieved to be an out of town blue collar type.

Electronic Equipment Bank (EEO) out of business, Vienna VA
- Caters to white collar, it was located is upscale Washington DC suburb.
- Competative with big city stores like Universial, HRO and AES.
- Over priced used.
- Clean store with lots of room, and higher over head. Crowded on weekends.
- Staff generally rude and not quick to wait on people they do not know well.
They did not want to deal with blue collar walkins, in fact one salemans told me
if I was not there to spend money that Money Talks and BS walks.

Ham Radio Outlet (Northern Va)
- Caters to white collar, it is located in Washington DC suburb.
- Competative with big city stores like Universial, HRO and AES.
- Over priced used.
- Clean store with limited room, and higher over head. Hard to find location.
- Staff reaction to customers varies, and depends upon who is working, one guy who has waited on me several times has completed my sales in a timely fashion while the other one take forever to wait on you.

Basically I have found staff reaction to customers is like that of a Radio Shack store. The sales people have lower salaries and at times will "cop an atttitude". This can manifest itself as indifference or impatientance depending the mood of the person at the moment of encounter.

The owners are trying to make a buck in a market that is driven by unwillingness of the customer to allow for profits. After all Ham Radio is a hobby and most people want to pay next to nothing for a $1000 or more radio. The store owner's have to sell expensive radios with a handle on overhead.

On the customer end we have to shop around for best price or the XYL or OM will have us skinned.

There has to be a balance, personally before I plop down $4000 for a radio I would want to lay my hands on it even for 1 minute. It must be possible because car dealers let people test drive $14,000 plus autos which in my opinion has far more risk involved in it that looking at a radio in a show room enviroment. People buy these $14,000 plus autos that have been taken out of the "package" and driven.

Well my 2 cents worth.

139. Re: Question on vacuum tube plate dissipation definition

Source record: 34921

The averaging time depends on the thermal time constant of the plate. and on Morse words per minute.

Rules of thumb: Don't make one dash longer than 1 second when with an 807 in the final. For 10-watt transistors don't make dashes longer than 0.5 seconds.

When starting fron cold you can tune up by holding the key down for much longer periods.

Step 1: Using phiillips screwdriver ~ open cabinet (Yes, ham ops can and are encouraged to open their equipment)

Step 2: Turn knobs, observe action of capacitors, inductors, switched lump values, etc

Step 3: Take a picture if you wish

Step 4: Open handbook or other theory book and read up on impedance of capacitors, inductors, and resistors and how they are frequency dependant. Have fun with simple math and calculate the max/min resistive, inductive and reactive impedance your tuner can "dial up" at various ham frequencies. Read up on load matching, power transfer at resonance, etc etc.

Step 5: Put cabinet back on and enjoy a piece of gear you understand

Steve

144. Re: GMRS reality range

Newsgroup: rec.radio.amateur.equipment
Date: 2003-01-05 15:34:47 UTC

Source record: 34925

I ditto Pactrick's observations. I use normally use a Motorola GP300 for GMRS through a repeater but I bought a pair of those FRS/GMRS combo walkies and found them to not me much better at 2 watts than at 1/2 watt which leads me to believe two things. First, the antennas are piss poor.

Second, the figures claimed by the mfgs are misleading. To increase the range from 2 miles to 5 miles takes more than quadrupling the power in the same radio. Ohm's law is never wrong!

The best range possible is over open water (other propagation anomolies notwithstanding). This is probably the criteria the mfgs use to make their 2 mile and 5 mile claims.

I am in the middle of making range tests for several types of these radios including a UHF business walkie, MURS, etc. I got pretty close to 2 miles on FRS talking across open water using a Motorola FR-50 which is one of the better FRS radios I've used. In regular suburban terrain, I got 1 mile max from the burger joint drive up window to my house. On the trip back home, my wife said I was a little weak until I was a half mile away. She heard me better than I heard her which leads me to believe there are variations in the quality of any two radios.

That became even more apparent using 4 identical Cobra 2 channel FRS radios, one of them was totally deaf while the other three seemed ok.

Perhaps you might try comparing both of them to another radio, preferably a base station or mobile with a decent antenna. That way you would know right away if one of your radios is not up to par.

Package deal of 2 of the famous Kenwood TR-7400s
The first one is clean, and works well. 25 watts, 144-148Mhz.
The second one needs a new volume / squelch pot. Other than that, it is a
fully functional radio!
Ship both for $95!

If you look through the Usenet archives (http://groups.google.com),
Yo will fine a brief post or two on my efforts, to that date, of kind
of reverse engineering and re-using a bag/transmobile type phone.

The key really, is to use only the RF/IF strip, and essethinally
dump/replace the CPU/Control boards with something you can
control (I was programming the PLLs with a PC)

Deal includes 2 of these....
The first one works and looks well! 25+ watts 144-148Mhz.
The second one needs alignment or so. It is off frequency, so probably a crystal needs alignment.
Package deal $125 shipped for both!

Ken,

The Fluke 85 is a detector probe to measure RF voltage .... use a o'scope probe or a "sniffer" to measure frequency on a counter. The ARRL Handbook shows how to build a sniffer probe ... easy and cheap!
gene

A $4000 radio would be the equivalent of a $300,000 Ferrari. Try and get a demo drive in one of those babies, unless you smell like money :-)

Thanks, Gene.

So much for "try it and see."

Can I salvage anything here? If I plug it into the voltage jacks of
my DVM (an Elenco LCM-1950), will it show the RF voltage? Or does it
require that I use a special Fluke meter?

Yep. It will work with any DVM. It is basically a high grade rectifier for converting RF (high frequency AC) into a DC signal. You will find it very useful for tuning mixers, peaking amplifier stages, etc etc. Set your DVM to read DC voltage.

On a temporary basis, brass aligator clips are OK up to 30 MHz provided the
connecting wire is not longer than a few inches.

Been doing it for years.

The 85RF probe is calibrated to present the DC equivalent of the rms value of a sine wave input. In other words, if the meter reads 1 volt DC then the RF input is 1 volt rms. It will work accurately with any dc voltmeter that has an input resistance of 10 megohms +/- 10%.

Probably one or more of the pass transistors in the regulator section.

166. IC-910H or FT-847 for VHF/UHF/Sat ?

Newsgroup: rec.radio.amateur.equipment
Date: 2003-01-06 00:07:20 UTC
From: Saku Elovaara <sakke@kolumbus.fi>
Message-ID: <avahbo$d9b$1@phys-news1.kolumbus.fi>
Source record: 34848

Hi all readers

I have plan to buy new VHF/UHF/sat rig in next month.
In the past two month I have read (via google) handreds
of hampages to find the answer to the question, which
one is the best for me. I have also read both rigs user
manuals.

My plans of usage is;
1. satellite working (ao-40 etc)
2. vhf/uhf grid peditions
3. local repeater/simplex working

Pluses and minuses for each radio are listed below. Both radios
have sat mode, internal keyer, separate antenna connectors etc

IC-910H
=======
+ more power (100/75 V/U)
+ much more memories
+ 23cm bandmodule in option
- dsp in option
- only one tx signal for remote keying (preamp/pa)
- early models has serious problems with freq stability

FT-847
======
+ sub tune knop for doppler correction
+ more satellite memories (19 vs 10)
+ 50MHz builtin (ok, next sunspot are nearly ~2010)
+ remote tx keying signal for each band
+ buildin dsp
+ sensitivity is better than ic-910 ?
- only 50W power output, so external pa may needed (or douple size antennas)

I'm searching VHF/UHF radio, not HF radio.

I some day I think that ft-847 is best for me and some day not.
I some day 23cm is better than 6m and some day not.

If you have any ideas or real user opinions to tell, please
write them to this newsgroup or private email.

Thanks!

Yours,

Saku OH2YA

167. Omega-T Noise Bridge Component Info Request

Newsgroup: rec.radio.amateur.equipment
Date: 2003-01-06 00:20:57 UTC
From: Carl Franck <kip@newt.ccmr.cornell.edu>
Message-ID: <avai59$ni0$1@news01.cit.cornell.edu>
Source record: 34849

Hello NewsReaders:
I am hoping that someone with an Omega-T Model TE7-02 noise bridge or the schematic could tell the value of one fo its resistors. I just fried a resistor in mine by sending it 100W RF. I was hoping that someone with one could do me a big favor and tell me the value of the resistor that goes from one of the potentiometer terminals to the ground for the rcvr BNC connector. You can readily see it by removing the battery seat. Of course, if anyone has a schematic, I would appreciate them reading the resitor's value from it.
Thanks for reading this. 73, Carl KB2KDV cpf1@cornell.edu

173. Kenwood DMask problem

Newsgroup: rec.radio.amateur.equipment
Date: 2003-01-06 01:54:56 UTC
From: dacosta@hawaii.edu
Message-ID: <b2197134.0301051754.6224bdd1@posting.google.com>
Source record: 34855

I can no longer eject discs from my KDC515S without hitting reset because the power turns off before the faceplate drops to the correct position. It's one of the DMask faceplates where you can either remove it or flip it up. In order to eject (and insert) discs, you must, by pressing a button, rotate the faceplate to the correct position. Anyone else with this problem? Or do I really have to be without it for a month to send it off to Kenwood? I can repair almost any electronic device, but I can't figure out how the unit detects in what position the faceplate is.

174. FS: Hallicrafters Receiver

Newsgroup: rec.radio.amateur.equipment
Date: 2003-01-06 01:56:20 UTC
From: Al Robinson <arobins2@twcny.rr.com>
Message-ID: <8n5S9.209318$Vz2.50969412@twister.nyroc.rr.com>
Source record: 34856

Have for sale a Hallicrafters SX-122A tube type receiver, dual conversion, 4-bands.
Has coverage from 1.75Mhz to 34.0Mhz in AM, LSB/USB, and CW modes. Also covers broadcast band 540Khz-1600Khz. Performs well on all bands. Cabinet is original
paint with no chips. All other cosmetics are great. On a scale of 10, this rig is an 8.5 - 9.0.
Original manual included. For photos and questions, email: arobins2@twcny.rr.com.

Price is $235 firm plus actual shipping. Payment by cashier check or money order only.

Al , W2JUV

176. Looking for manual/schematic

Newsgroup: rec.radio.amateur.equipment
Date: 2003-01-06 02:18:15 UTC
From: n3jja@bigf00t.c0m
Message-ID: <VHIw7usWfT5d-pn2-OkdzYlnzj2yr@localhost>
Source record: 34858
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

I have a VHF Engineering repeater in pieces that I want to restore as a personal project.

I think it's a RPT-144, but there is nothing stamped on the front of it, so I'm not entirely sure what band it's for.

Anybody know where I might find manuals and/or schematics for this?

TIA

177. Re: IC-910H or FT-847 for VHF/UHF/Sat ?

Newsgroup: rec.radio.amateur.equipment
Date: 2003-01-06 02:29:53 UTC
From: Rick Wagoner <strgzr@sbcglobal.net>

179. Need advice on first rig

Newsgroup: rec.radio.amateur.equipment
Date: 2003-01-06 06:25:53 UTC
From: John LeMay <jlemay@njmc.com>
Message-ID: <pan.2003.01.06.06.25.52.611413@njmc.com>
Source record: 34861

So after 20 years of being in the radio hobby as a scanning enthusiast and SWL, I've finally decided to get
my ticket (Tech only - I'm still brain dead to learn the code). While after all this time I know HF receivers and VHF/UHF scanners like I know my own name, I'm a bit lost when it comes to what I want for my first rig.

Basically, I want a mobile rig first. I know I want at least 2M and 70cm (pretty simple, right?). I've looked at the IC-207H and the Yaesu FT-90R and both look to the more of less untrained eye like they would do the trick. So, a couple of questions come to mind:

* Are these missing any key features that I'm likely to kick myself for not having?

* Should I be looking at any other manufacturers? Kenwood seemed a bit high in price.

* Any technical glitches in any specific rigs or known to any particular manufacturer that I should know about?

* Any recommendations or advice on an antenna for my car? Cushcraft and Diamond are a couple of names I know from other areas of the hobby and with dual band antennas. How do they perform compared to others?

Please feel free to point me to some sites with equipment reviews. I don't mind reading, just didn't find anything in my searches.

thanks!

I agree really, and can't really blame them for the amount of money
they make on the radios. It's just like cars. Once you drive one, IE:
"open the box" it's lost a good bit of value. Sure, most car dealers
let you drive "demo's" but they have big pockets in general and can
afford to take a hit on a demo car once sold. Most of these radio
dealers are not in the same position to lose money. Many of the
smaller stores are lucky to stay in business at all. If you display a
new $4000 radio, you won't be able to get near that amount once you do
sell it. And it will most likely be scratched, etc. People don't give
a hoot if they don't own it. I know I would never buy a demo unless it
had a deep price cut. As far as being able to try one, I ask for
opinions on the air from users, and scan the net for info. I bought a
ic-706mk2g on the net, and I'd never tried one at all, but I already
knew what I was buying from previous research. Sure, it would be nice
to be able to try a high $$$$ rig, but I don't expect the dealer to
take a bath just to allow me to do this. It would cost them several
hundred dollars to demo a high end rig. No one wants to buy a new
radio in anything other than a sealed unopened box. MK

i think if i where doing this i would go with the 910 only cause its smaller cheaper than the 847 and if you plan on hauling this on expiditions you want to keep things small and light and there is nothing small about the 847 nor light when you have to carry 2 additional amps and even though the manual says the 847 hears better i'll bet if you listened on the same freq and antenna with the two radios i'll bet the 910 will hear better cause its tough to get a radio to perform well on HF/6/2/440 all equally so they tend to lean toward HF i know my 706 doesnt hear as well on 2 as it does on HF just the nature of the beast so i would get the 910 now and then the 756proII later when you want to do HF you would be a lot happier cause you would want to monitor VHF often and having seperate rigs is very nice
good luck

And how would you determine that any radio on display meets specs? You have
a portable lab?

Larson is another good brand name for mobile antennas. Larson, Diamond and Comet are probably the big three. Cushcraft makes mostly fixed-station antennas, as far as I know.

Subscribe to QST, and you will be able to access product reviews at the ARRL web site, which includes reviews for virtually every transceiver going back to the early 80s.

There are also user-type reviews at Eham.net, but they are not as scientific as the ARRL reviews. They are free, tho'.

Message-ID: <avcpaf$g56$5@knossos.btinternet.com>
Source record: 34881

NOW AVAILABLE :

New Program "BANDPAS1.exe"

The great majority of inductance and capacitance filters consist of 1 or more cascaded basic T or Pi sections. This easy to use program calculates L and C component values of simple T and Pi bandpass filters used in applications where ripple in the pass-band response, frequencies of infinite attenuation in the stop band, exact impedance matching, etc., are not of great importance.

Insertion loss versus frequency is computed between source and terminating resistances through the stop and pass bands.

One small 32 kByte file only. Download BANDPAS1 in a few seconds from website below. Run immediately.

No, the dealer does it for you!

Many dealers who sell radios that 'really' need to work will test all
radios prior to shipping - some even charge extra to unpack and certify
it.
Check some of the marine radio dealers for examples.

Dave

I've done a real turnaround. I think my two "first choice" rigs now are
the Kenwood 707 or one of the Alinco dual banders. So much for Icom and
Yeasu!

> Get a small power supply, and you will be able to use your mobile rig at your

> the ARRL reviews. They are free, tho'.

I've been reading through the eham.net stuff. You are correct - not
scientific. Good enough to narrow down the list a lot though.

thanks Bob and everyone else!

If you get a dual bander with a decent amount of power, say 30 to 50 watts or more, it doesn't take much to hit local repeaters. I use a mag mount mobile whip on a metal serving platter, sitting on the floor, indoors.

Give it a shot. The main thing is don't let yourself fall into the trap of believing the people who tell you they "learned it in a week". While they may have done so, they are the exception not the rule. According to the book "Morse Code, The Essential Language," it takes the normal person about 30 hours of study and practice to get to 5wpm. The main problems that I have observed in people trying to learn code is unrealistic expectations (i.e. learning in a week) and not have regular practice sessions. A person should work 15 to 30 minutes per day most days of the week so they don't forget between sessions. I.e. Try to practice 4 to 7 days a week. Don't make the sessions too long or the mind tends to blank out.

That's more or less what I'm thinking - but from a car perspective first. With a 30-50 watt rig I don't really need a 5/8 sticking off the car. I do however want to make sure I don't cheat myself. I'd hate to be stuck someplace with (for example) a dead cell phone and can't reach anyone on 2M or 70cm either because I scrimped on the antenna, rig, or both.

I'm sure my wife will come around and someday I'll get my D-130J outside instead of in the attic and maybe even get a decent vertical up. No beams though - I'm sure I'd never get away with that!

My biggest problem has usually been memorizing my test material before I learn the code, or just plain having the time to dedicate. I really turned my nose up at the no code for the first few years, but I think I'm starting to come around. I still actually feel bad for all the folks that have worked to get their Advanced and Extra licenses to now see that the code req has dropped to nothing more than you need for the old Novice license. Hope those folks aren't too irritated with guys like me!

Don't worry about them, they'll survive. The old timers
in radio have been griping about lax standards in ham
radio since day one. You'll pass the test and meet the
present standards just like they did, it's just your's are
different than theirs were. When I got my Technician
license you had to take the Novice and Tech tests
(total of 65 questions) now all you have to do is
take the 35 question element 2 and your in. The fact
that the new Technicians don't have to answer 65
questions to get a license doesn't bother me at all.

On the memorizing of your test material try downloading
the code practice files off of the ARRL web site at
http://www.arrl.org/w1aw/morse.html these are changed
regularly so you will always have new ones to listen to.
Good luck with the code, if I can do it I know you can!

Running Win2k, with normal background operations, but disk is not
fragged, and plenty of disk space >30%. It always hangs at 60% on
upload, suggesting a timeout/error with a particular instruction.

Do you still have the original *.tpl file you downloaded from the
FT50?

As I recall, you always have to start with that file to modify it and
load back to the radio, you cannot just start with the software. You
might ask a friend with an FT 50, for the same region and with the
same mods, for their starter file, in case yours is corrupted somehow.

You may also want to try a full reset as in the FT 50 manual.

Other than that, I don't know. Mine never did that.

Happy trails,

A dual-band quarter-wave whip will be plenty for mobile operation. With the
longer antennas, you get slightly lower angles of radiation, but there's not
really that much difference between the 1/4 and 5/8 wave designs when it comes
to hitting local repeaters.

Sure - they supply people to march in parades <wink>.

Seriously, I dunno why many people are so hung up on "new in the (unopened) box". There is a statistical chance that any equipment in a sealed box is defective - the DVD player I got for Xmas for one example. I sincerely doubt that having a reputable dealer open the box and turn the unit on, or demo it for a customer, increases the odds I'll get a bad one. Just the opposite: I certainly wouldn't repackage a defective radio to sell as new if I wanted to stay in business. Moreover, there's not much one can do to a modern xcvr to damage it in a demo: it'll save itself even if you hold the key down with no antenna. Of course YMMV.

For the longest time, I wouldn't buy anything unless it was a floor demo
unit. That way I KNEW I was getting something that worked, and
probably worked well. Maybe even a ringer. Especially in HiFi.

I almost bought a PE turntable that turned out to be junk when I had
the guy demo it. Bought a Sony receiver instead. Then picked up a
BSR 710QX turntable later new in the box. Worked good. Mostly.
But it had a barely audible 'click' on each revolution. Most people
couldn't hear it. But once I knew it was there, bugged the hell out of
me. Ended up selling the thing to someone who just wanted it for a
'bar blaster' setup and bought a demo of a single play direct drive
turntable. Moved my B&O cartridge over there and was quite pleased.
Kept the Shure M95 with new stylus as a 'junk record' interface.

Yeah, I was anal about my sound back then.

Anyway, on purchasing demos...

If it was a turntable (see how old I am?) or a cassette deck, I would
make a condition of sale a new stylus or even new heads (in the bag,
NOT installed) for a cassette deck. In addition, if I didn't get a
discounted
price, I'd ask for an extended warrantee.

I wasn't worried about the electronics, as like you said, that's statistical
in nature, and being a 'floor' unit, I'd probably make out better in that
regard.

Minor scratches in wood trim? That's what 'Old English Scratch Guard'
was for! Besides, it's not going to stay 'perfect' once I had it home
anyway.

Mike

Source record: 34757

My FAITHFUL old ASTRON 20M power supply has recently began displaying
the wrong output current.

My ASTRON is old and it uses a single meter to show both output voltage
and cuurrent.

While powering a 440 Linear amp + dummy load, roughly
3 AMPS, the meter shows 10AMP for a while then can vary from 10 to 4
back to 10. RF Power out and SWR reemain constant while current varies.
Same problem with a 2M linear amp outputing 25W.

Any hints what to look for?
PS oscillating due to old dried filter caps?
Other problems?

My ASTRON schematic does not show the meter circuit.
I do not see a meter shunt in high current path.

It would be so helpful if someone can describe the
metering ckt for an old one meter RS20M or similar ASTRON PS. I see
various parts inside black shrink tubing attached to the meter switch,
maybe resistors, not sure. Meter current ckt scheme is not obvious.

Thanks for any help.
73, W6MIK, Dave

Hi David

I don't have an Astron schematic in front of me, but as I recall they
do not use a calibrated meter shunt in the output circuit. Basically
the meter measures the voltage drop across the base-emitter junction of
the output pass transistors and the meter scale reads in amps. The emitter
ballast resistors may also be part of the measurement loop. I would look
for excessive voltage drop across the base-emitter junction of the pass
transistors. Anything higher than .8 volts at full load is suspect. Also
suggest
checking the emitter ballast resistors. They are usually .05 or .1 ohm.
Astron power supplies are known for failures in output transistors.

Good luck and 73,

Al, W2JUV

Hi there.
I'm doing this project for school that involves a complete mathematical analysis of this receiver that I built. The detector (it's a regenerative design) uses a grid-leak method on a 6GH8A pentode.
Let me hasten to say that I'm not asking you for all that! I've got it almost done (I hope) except I need a model for the control grid current. It's a function of Vg and Vp, I beleive. And no, I'm not using SPICE- I find the tailoring of all those fitting parameters more confusing than applying Kirchoff ad finitum to the circuit.
Thank you very much for your time.

Sincerely,
Ross

My Astron 35M uses only one of the emitter ballast resistors (0.05
ohm) as the current sense resistor. I would guess that the 20A
supplies would be similar. The emitter-base junction *is not*, nor
should it be, in the circuit. A 1K pot in series with the meter is
used for calibration.

I believe that the 20A supplies use a 0.1 ohm ballast resistor.

I have a lot of working AN-3349/GRG-106 2 of these but the meters were scavenged. The units do work to specs you need the meters. 2 4cx350a tubes in them.
2 RT834s/GRC106s with out the meter again but working properly.

1 complete and in great condition AN3349 with proper meters Ready to do 400 watts with your exciter.

Make me a offer for any or all of the above plus shipping
Or will trade some for a HF rigs, HF amps.

Can meet to save shipping stuff is heavy! But can ship ups at your cost. I live in the N. Nevada area will so if your within oh 2 hour drive we can do bizz. for a meeting.

It's been a long long time <1957> since my vacuum tube days but let me meander a bit. Grid Leak established the dc operating point for a Class A amplifier. The grid leak resistor has a distributed capacitor, leakage and circuit stray capacitance, to chassis and to the plate circuit. In the tube there are a series of interelectrode capacitors. The Suppressor grid is generally grounded to chassis to minimize electron backscatter and to break up the Cp to Cg. The screen grid is heavily bypassed. Regeneration is achieved by introducing feedback, variable capacitor or adjusting tube gain, from the plate to the grid with a phase angle between 145 and 225 degrees and a feedback factor very close to but less than unity at the operating frequency.

So, I would begin my model by using a dependent voltage source, % of tube output, with a variable gain, setting loop gain, [forward gain of the amplifier times the feedback factor] [ratio of capacitors, plate to grid leakage], to slightly less than 1, and have a phase shift of 180 degrees nominally with a variance of +/- 45 degrees.

Test the model until the circuit just breaks in oscillation then back off on the feedback a percent or two.

Let me know how it works out.

Deacon Dave, W1MCE

I think you may need to include the "uramp" in a general voltage
controlled current source. The electron only come out the control grid
and never go in. I think the grid current actually follows something like
an exp() curve near the zero bias point.

Treat the pentode control grid as the plate of a diode detector without any loss of precision.

Essentially, the average DC grid current is equal to the peak value of the RF signal voltage divided by the high-value grid leak resistor. The grid current, of course, flows only on the peaks of the grid sinewave form. Grid current has an operating angle given by -

Theta = 2*InverseCosine(Ea / E)

where E is the peak value of the RF input signal and Ea is the DC voltage across the grid resistor. The difference between Ea and E is very small. But for your purposes Theta can be ignored.

The internal diode resistance, when conducting, can be assumed to be a linear resistance of a few hundred ohms. For normal detector operation it is necessary only that the grid leak resistor be very much greater than the internal diode resistance.

The grid (the diode plate) voltage is then amplified by the pentode in the normal manner, with the mean DC component varying according to the audio modulation. The pentode anode must be decoupled for RF otherwise the RF component is fed into the following audio stages. (A junction transistor works in exactly the same way except that the base must be forward biased by a few tenths of a volt.)

****

A complete analysis (but it's not very complicated) can be found in "Communication Engineering", W.L.Everitt, E.E. Ph.D, 1937, McGraw-Hill Book Company Inc.

This is an old book but should be available in many university technical libraries. It is still the best book on mathematical treatment of vacuum tube circuits in radio receivers and transmitters. Go to the chapter on Vacuum Tube Detectors. I thoroughly recommend it.

None of the following programs deal with detectors but you may find some of then useful with your studies.

Hello fellow hams,

I am appealing to you who are broadcast engineers. Does anyone have an FM broadcast transmitter they do not need or want?

A friend of mine is in desperate need of a 5 KW or greater unit. He has no money...so I am asking for a donation. I will pick up and transport it.

Thanks and please email with any info.

Dan

Not correct. The 765 Pro user manual has basic info on the transverter jack (which the 756 Pro *does have*) on page 19:

"When 2 to 13.8 vdc is applied to pin 6 of ACC(2), the [XVERT] jack is activated for transverter operation and the antenna connectors do not receive or transmit any signals (p.13)".

"While receiving, the [XVERT] jack can be activated as an input terminal from an external transverter".

"While transmitting, the [XVERT] jack outputs signals of the displayed frequency at -20 dBm (22 mV) as signals for the external transverter"

(There is also more detail on the actual connector pin-outs and functions in another area of the manual)

OK,OK, so the emitter-base junction voltage drop is not used for ammeter
operation, but it *is* used for the current sensing input on the LM723
voltage regulator. Check your schematic for the 35M again, it shows
one .05 ohm ballast resistor for each of the four 2N3771 pass transistors.
And the ammeter (1K pot in series with meter) is connected in parallel with
R102,
which is a .05 ballast resistor. So it is reading the voltage drop across
only
one ballast resistor. Back to my original statement; if the ammeter
reading is inaccurate, it is caused by pass transistors that are not
sharing current equally, or ballast resistors that have become overheated
and
changed value.

Best bet for the owner of the Astron 20A is to replace both 2N3771
transistors and both ballast resistors. The transistors must be a matched
pair so they share load current equally. If not, the problem will likely
continue.

Been there, done that.

Al, W2JUV

I will look at my 0.1 ballast resistors
for a possible failure and see which one is
used for current sensing.

> A 1K pot in series with the meter is
> used for calibration.

My 20A ps does not have any pot in series with the meter.

Thank you, 73, W6MIK, Dave

I do. More than one. I sell air conditioning/heating/refrigeration
equipment for one thing. And I sure as hell don't supply demo units.
If an equipment co. brochure is not good enough, they are shit out of
luck. And I don't keep a stock of units either. Only service parts.
Only when someone actually wants a unit, will I go buy one. MK

> sealed box is defective -

Being defective has nothing to do with it. I don't want a radio that some nosepicker has had his greasy fingers in. Or scratched, or even breathed on overly hard. I expect nothing less for something new I buy , and pay full price for. Some of the tech's scratch the radios just moving them around on their test benches. They don't care. They don't own em. I don't want anyone scratching my radios. That's my job if it has to happen.
I know one dealer that checked and "opened up" the type radio that I bought, before they shipped them out. I nixed that company just for that reason. I don't want anyone touching my radio after it's been built, except me. Now, if they want to sell me a " pre-nosepicked" radio for a greatly reduced price, well ok then...To each his own in this regard... If I get a DOA, I'll make them send me a new one. If it dies later in warranty, I want the company/factory to fix it, not the dealer. MK

>Thank you very much for your time.

The source for arcane lore on vacuum tubes is 'Radio(tron)* Designer's
Handbook, F Langford Smith. The 1998 reprinted edition is ISBN 0 7506
3635 1.

* (tron) was included for the original Australian and the US editions.

Chapter 2, section 8 probably has everything you need, and then some.
You may need to dig around to find if the 6GH8A is similar to one of the
older types for which data is given in the examples.

The audiophiles have discovered that XP has some problems with
streaming operations. They noticed this when digitizing music and
as I recall it was mostly with USB interfaces. Since the load is a
streaming operation this may be part of the problem.

I have not yet successfully run ADMS on XP yet but have seen some
problems with Win2K. This question crops up so regularly that there
must be a real problem with the software. RTSystems (the folks who
actually produce the software) sort of quit the ham business a few
years ago. Now both Rod and his wife have day jobs and do the
software as a home based business. Since they have less time

they don't really seem to be keeping up. Another factor is their apparent paranoia, they seem to spend more effort on copy protection than on the software itself.

I have a copy of ADMS 1E for the VX5 en route as we speak and it is going on one of my XP machines I'll post the results.

Your still SOL Mark. The store I worked in was an Icom authorized service center/dealership and on
several occasions we had to go through a stack of new radios to implement a MWO (modification work
order) on new radios. You dont think Icom ships 100 radios back to Japan to get a diode changed do
you?

And yes.... I both scratched and picked between each radio.......

Steve

254. Johnson Valiant II AM transmitter.

Newsgroup: rec.radio.amateur.equipment
Date: 2003-01-08 16:14:45 UTC
From: m38 <m38@cox-internet.com>
Message-ID: <v1psvp3ml4o20d@corp.supernews.com>
Source record: 34704

Johnson Valiant II AM transmitter. It came from an estate and has only been checked to make sure it isn't dead (it does light up okay). No way to check it out further here. Front panel looks nice but around the outside edges there are some paint chips. No modifications and appears all original. Includes manual, $325.

Be serious. You are comparing apples to comquats. How would one use
a demo air conditioning system?

> If an equipment co. brochure is not good enough, they are shit out of
> luck. And I don't keep a stock of units either. Only service parts.
> Only when someone actually wants a unit, will I go buy one. MK

Presumably from your context we are talking about industrial grade
equipment. Again, the question comes up -- how would one use a demo
unit.

Also as an aside, why did this get splattered all over usenet when it
was started on r.r.s?

(BTW, I wouldn't want to buy from you, because a brochure wouldn't be
good enough. Ever heard of references?)

Geez, you are bitter.

We're not talking about VCR repair by Fly-by-Nite Enterprises; we're
talking about HAM dealers. Different animal.

I've only had to send one radio back for repair, and their charges
were so small compared to the work done (direct lightning strike on
antenna) that I wonder how they survive.

Multiple vendors have sent me parts gratis, ranging from service
manuals to replacement buttons.

> I know one dealer that checked and "opened up" the type radio that I

> built, except me.

One vendor I talked to does exactly that, and will get my business for
that reason. They want to make sure that what they ship is what they
say it is and that it doesn't take a second trip to get it right.
Again, they aren't Radio Shack or Fry's. They are an honest business.

> Now, if they want to sell me a " pre-nosepicked"

What's with this "nosepicking?"

From: Keith <kavan@neb.rr.com>
Message-ID: <47%S9.4313$nT1.95417@twister.kc.rr.com>
Source record: 34788

I purchased this tuner to use with the Yaesu FT-897. The software is not out yet from LDG/W4RT to make the 897 & AT-11MP compatible. I have sold the FT-897 and am now selling the AT-11MP. It has never been used and in fact, it remained in the box. Full factory warranty by LDG. Sales invoice available. Paid $219.95, will ship/insure in conus for $185.00.

Another book to look for is the one from the MIT/RadLab series which
deals with vacuum tube characteristics. My uncle showed me the
section he wrote, which happened to deal specifically with
electrometer tubes and characterization of the grid current for them,
so I know it's in there. Sorry I can't give a more exact reference.

Cheers,
Tom

For Sale: One New Uniden BC200XLT handheld scanner with cell modification.

This unit was purchased in 1994. It has never been removed from the box.
It is still in its original packaging. It had been modified for full 800MHz
coverage before it was sold to me. All accessories included: antenna,
case, charger, battery, instructions, and earphone. I paid $185.00 for it.
I would like $160.00, but make me an offer if interested.
Please reply by email directly to me.

Thanks,
Gary

Yeah, in a pig's eye....

Think of avionics:
it's FORBIDDEN to use cellphones on planes, although the avionics
should be immune from out-of band signals.

I thought this was bullshit until I had a truly bizarre incident.

I was at Boston Logan, flying out to Chicago, and I carried an old,
supposedly high quality, European GSM phone, ___900 MHz ONLY___.

On arrival, not only I discovered that my thoroughly unusable phone
(which I had kept off for a week) had switched on accidentally in my
bag. IT ALSO HAD RECEIVED A TEXT MESSAGE FROM ITALY. I later checked
with my provider, who confirmed that a message was delivered while I
was in the US.

This means it managed a successful RF and protocol handshake,
validation, and transaction, on a frequency is was not at all supposed
to cover.

I can only guess that I was very close to a 800 MHz US GSM BTS, and
that signals somehow broke thru out of band both ways.

From then on, I took the airline cellphone ban much more seriously,
and claims of spectral purity much less so!

The US has some 900MHz GSM networks, so your phone may well
have just been doing what it should.

There were some tests done on commercial aircraft for field strengths
from various sources, including the use of cellular phones. The
largest
field strength in the cabin by a very large margin was leakage from
the
microwave ovens.

However, use of mobile phones is an unnecessary extra risk, and could also cause network problems (hand-off assumptions in the network don't include 600mph speeds, and the large coverage due to the extra height could be a problem).

Regards
Ian

The greatest cause of TVI is overloading of the front end. cable and
or satellite signal access have zero effect on overload. It is just
the same with the junk phones you can put all the filters you want on
the lines if you are blowing through the front end filtering is moot.

The country was enjoying a CB radio craze during the sun spot cycle of the 1970s and many "good buddies" did exactly as Jon describes, wiping out TV reception for miles around their stations. This of course caused a hue and cry from the couch pototos that led FCC to ban amplifiers suitable for CB. Unfortunately, Hams took some colateral damage. We can still buy amps that boost 100 watt rigs to legal limit and beyond but not amps that would boost QRP rig outputs into the 100+ watt range. For example, I'd buy a Yaesu FT-817 tomarrow if I could get a compatable amp without going out of country.

Now, that 'damage' may have been a small price to pay for reduced TVI from CBrs back in the 70s but I doubt the same is true today - not because CBrs have become more law abiding but because there are fewer of them and, more important, because their victims have all switched to cable or satellite TV and are essentially immune to CB interference. Therefore, the time has come to revise FCC rules to let US companies supply licensed Amateurs with amps compatable with radios that output 5-20 watts.

That's my $0.02. What's yours?

So is mine. I knew an old man who sold used books at a flea market,
and when he found that I was interested in the older electronics books
he would put aside anything he found till I got a look at them. I
bought quite a few from him, but he died of cancer a few years ago, and
I haven't seen another good deal, other than Skolnik's RADAR book.

I don't think FCC has got anything to do with the unavailability of 100W amplifiers on the market. The reason those are scarce is purely economical: there is zero demand for them.
The de facto standard power on HF rigs has historically been 100-150W, and the occasional QRP transceiver has been targeted at QRP enthusiasts who have little need for 100W.

Now, what would be the point of manufacturing a 10W HF transceiver and a 100W amplifier when they're widely available as a unit?

If I can be allowed to make an analogy: you are requesting a car manufacturer to make an automobile that will only go up to 40 mph, with an optional 150 mph addition that can be purchased separately.

Actually, the FCC has everything to do with amps and the current limitations. It is illegal to commercially produce an HF amplifier in the US that can be driven with less than 50W of exciter power. This law went into effect in the 70's to prevent CB'ers from driving amps with their lo power radios. It's actually the hams who have suffered as a result. It is not illegal to build such an amp however. Don't remember the specific law, however it should be in the message archives on the hfpack group at yahoo.com and/or possible the 817 group.

Sure could and probably is. If not look at the hetrodyne mixer crystal.
With older rigs the rocks (crystals) will eventually go off into never never
land. Usually right after they start dropping lower in frequency.

I have a 530s and it is a excellent radio. Even by todays standards.

I have an RCA Radiotron; if someone needs, i would be glad to scan up
to about a dozen pages at 200DPI in GIF (most compact) and send the set
of scans (PDF and ZIP makes it larger).
Any specified page or part (like a graph) i would be then glad to scan
at higher (specify) resolution.

Where? Neither HRO nor AES offer them in their catalogs and I don't have
time to research and build one.

>
> The greatest cause of TVI is overloading of the front end. cable and
> or satellite signal access have zero effect on overload.

What do you mean by "front end"? The term means the initial RF parts of
the receiver to me and in that case you'd be wrong because that kind of
TVI comes from the TV antenna and wiring and all that goes away with
cable.

>
> Buy one from THP no big problem and they work great.

How do I get in touch with THP?

Celphones on planes access too many cells at one time messing up the
cellphone system. Also it is not the effect on the planes radio gear but
some of the planes are fly by wire now and the extra RF can cause them to
do strange things. A pilot friend of mine was telling about how one of the
newer jets would make a slight 'shudder movement' when it was swept by a
near by radar. It would not be noticed by the passengers but the pilots
could tell.
```

Even when ic910 has 23cm band module? Do you have any personal experience with both rigs? Icom has also 3dB more output power, which is issue when installing 70cm/2m beams to the balcony in the city.

If you are working ao-40 with 2.4GHz -> 144MHz converter, it is not so easy find good 1.3GHz tx converter with 432MHz IF. (Kuhne Electronic have one), BUT then I need second transverter for terrestial 1.3GHz qsos.

Static on the 440 band you say? Maybe your the master synthesizer oscillator has drifted. It may not be noticeable on 2 meters but clearly evident on the 440 band. I had to readjust mine because all the 440 stations appeared 5 Khz off.

- Check for stations off freq. on 2 meters by listening +/- 5 Khz on each side. If they are off freq than 440 will be much worse.
- initialize the VFO and memory (page 30).

It's probably used to measure the photoconductor surface charge in a laser printer. I've used laboratory versions (+/- 3000v) routinely when I developed photoreceptors for many Xerox products. Many are manufactured by Trek Electronics or Monroe Electronics in Western NY state.

You can have fun measuring electrostatic voltage on things: you hair, comb, sweater, rug, balloon, scotch tape, plastic bags and many other insulators. To use, first zero the instrument by holding the probe in close proximity to a grounded conductor and adjust the zero knob. There may be another adjustment for gain. I suggest keeping this at mid scale. Now you can measure the surface voltage of things. Rub two insulating fabrics or surfaces to charge them by friction. Measure them with
the probe. In most cases they charge to 2000 to 3000 volts and will be off scale for your instrument. I have fun doing this with 6th graders in our Radio Coach classes.

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1950101840

This is an ICOM IC-751 HF radio in very good to excellent condition and ready for operation. It includes the PS35 builtin power supply, HM12 mic, manual, schematics, FL-44A & FL-53A filters, line cord, accessory adapter and 12v DC cable. It is on eBay starting at $395 with NO reserve ending Jan. 15.

Thanks for looking,
Peter, W2SKY@arrl.net
Rochester, NY 585-377-0535

327. FA:Shure 444D Desk Microphone on eBay

This is a popular microphone widely used in amateur radio stations. The microphone height is adjustable. The PTT control bar can be locked for hands free operation. The impedance may be changed via a switch on the bottom. Another switch enables a "live mic" condition for VOX. It comes wired to an 8 pin connector for ICOM rigs. You can change the connector for other rigs. The specification and frequency sheet is included. I have had excellent audio reports when using this microphone with
my IC-751. It is on eBay starting at $18 with NO reserve, ending January 16.

Thanks for looking,
Peter, W2SKY@arrl.net
Rochester, NY 585-377-0535

hey dean
ever consider the Antron 99 its only about $50 new and works very well
on 10 meters and mine even works well on 17 meters with no tuner
and with a tuner i can get 10-20 with it
check out your local CB shop or ham store for the A99
good luck

IIRC I bought my copy in 1954 or 1955 at the age of 14 or 15, about
when I built my first Williamson (I think that's what the tube amp
with screen taps from the output transformer was called ??).

> I get paid quite well for my EMI/RFI expertise. ....

Me too. RF *can* "blow right through" if the field is strong enough just like it *can* bother speakers when the leads act as antennae. However, I do not believe that was a significant cause of the TVI that lead to the amplifier ban. In my own experience, almost all of that TVI came down the antenna leads - leads which have now been largely replaced by a coax to the cable company. My reasons for that belief are as emperical as technical: CB linears are as available as ever, as the post that lead to our discussion shows, yet there is no hue and cry over TVI like there was 25 years ago. We can argue why there is no longer enough TVI to upset the citizenry - maybe CBrs have gotten 'cleaner' - but one thing is certain: if there is too little TVI to get folks upset, then IMHO US Hams should no longer be denied a useful device.

340. FS: ** GE 8068 tubes **

Newsgroup: rec.radio.amateur.equipment
Date: 2003-01-10 20:38:27 UTC
From: ovrreactor@aol.com
Message-ID: <20030110153827.02022.00000128@mb-df.aol.com>
Source record: 34499

I am selling eight (8) GE 8068 tubes. These have just been tested for emissions and leakage on a B&K 667 tube tester, and all test strong. They are used tubes, and with the exception of one tube that is missing a keyway, all are in good physical shape. I don’t have any equipment that uses these, so I can’t verify that they will work in any specific application. I will warrant these tubes against DOA, and that they will test good on a similar tube tester, but otherwise the buyer accepts these tubes “as-is”.

All 8 for $125, (shipping included for US).

If interested, please respond by email to < OvrReactor@aol.com >, do not post

Regards,
Tom Mitchell

I read in sci.electronics.design that Jim Thompson <Jim-
T@analog_innovations.com> wrote (in <c4st1v8nsdku08pckith5qgdhvjrenj11i@
4ax.com>) about 'NEED ADVICE: Vacuum tube grid current?', on Fri, 10 Jan
2003:
>IIRC I bought my copy in 1954 or 1955 at the age of 14 or 15, about
>when I built my first Williamson (I think that's what the tube amp
>with screen taps from the output transformer was called ??).

No, the Williamson was earlier and used KT66 pentodes connected as
triodes. Your amp, using the 'ultra-linear' screen feedback trick,
might have been the Mullard 5/20, the GEC 912 or the GEC 88-50, if it
was a British home-constructor design.

Hi Bill!

Think I have a similiar problem. My 520S was working fine on 80m's
last weekend, then yesterday 80m's was just dead.

Recently fixed a cold solder joiunt in my CARRIER unit and got USB
back working.

Contact cleaner and perhaps re-hit those band switch connections with
the soldering iron and some clean solder.

Gotta love these older Kenwood hybrids! Sort of the mack truck of HF
rigs.

I stopped at KT88 and switched to silicon. Prior to that I had built
a 10W class-A amp using one of those door-knob Ge devices from Delco.

I remember those - a real pain to mount on a 1/8" aluminum heat sink. One hole for the mounting stud, then three for the leads. My holes usually got too big after moving them over to fit the pins:)

I was lucky. My father-in-law-to-be ran a machine shop. He machined
me the most beautiful heat sink you've ever seen ;-)

He also planed the head on my '53 Hudson Jet after I warped it by
over-heating the engine and blowing the head gasket. Made it pretty
speedy... I could get 100MPH out of it ;-)

I could only get about 90 or so in my Dad's '49 Ford Flathead, no matter how much I tweaked the carb screws.

I saw one recently in Fry's parking lot in Santa Clara. Could not figure out how my girlfriend and I could both fit in the back seat. Not sitting up. Well, you know what I mean:)

Now we're bringing back the remembrances... I had a '50 Nash where the
front seat folded down to make a near-full-size bed ;-)

And the vibrator-powered tube radio would run the battery down in less
than an hour, so you had to park on a hill (fortunately easy to find
in West Virginia).

In my senior year in high school I got a '53 Packard (straight 8),
that car would haul ass! My father sold it while I was at MIT... my
sister was too short to drive it :-(

YEP! What is the next Question? I have the manual in front of me?

Seriously,

1) Set the operating frequency in either VFO.

2) Push the VFO/MEMORY switch to set in the MEMORY CHANNEL mode. Then
select a memory channel.

3) Check your setup. If satisfied then push VFO/MEMORY to return to VFO.

4) One push of the MEMORY WRITE button memorizes the displayed frequency
into the selected memory.

5) Enter duplex info push the VFO/MEMORY again to return to memory mode.
Then set either DUP- or DUP+ and the duplex mode is entered into memory.
In a similar manner add tone info by cycling TONE SELECT, TUNING CONTROL
[select tone], and then repeat TONE SELECT.

I just knew that old manual would come in handy someday. WHy just last
Tuesday I was thinking about thr.... [grin]. I still have an IC 27A on
the shelf.

Hope this helps. 73,

Deacon Dave, W1MCE

Universal is a first class organization in every way. The folks that work there are top notch, and the store is a fantastic resource. I consider myself extremely fortunate to be able to go there whenever I want to since I live in central Ohio. I would recommend the store to anyone interested in anything in the radio hobby.

How many times can they repackage the same low end 11M stuff and give it new names? Worst part is these rigs haven't changed in 10+ years except for the colors and other packaging stuff. I'll admit I had fun with my Grant DX, SS 360FM, and SS 3900 in the day but now it's just getting pitiful.

358. Selecting a first HT

Newsgroup: rec.radio.amateur.equipment
Date: 2003-01-11 06:53:39 UTC
From: John LeMay <jlemay@njmc.com>
Message-ID: <pan.2003.01.11.06.53.38.722862@njmc.com>
Source record: 34679

So, as I may have mentioned here, on Tuesday I'm taking my tech exam. I've been working on selecting a first rig. I was thinking mobile at first, but now I'm really leaning toward an HT. I'm in the north east US and it's pretty cold here now, so I really don't feel like crawling around my car running cables in this weather.

Anyway, I was pretty settled on the Icom IC-T90A but now I'm leaning toward the more expensive Kenwood TH-F6A. I'm not too concerned that one offers 6M and the other 1.25M - I don't think either get a lot of use here based on what I'm hearing on the scanners. I'm only leaning toward a tri-bander since the prices aren't off that much from a dual bander, and since this will be my sole rig for at least a few months, I want flexibility. Too bad Icom doesn't still have that quad bander available!

So - after all that - my question is does anyone have any comments (preferably subjective) comparing these two rigs? eham has them rated pretty close - 4.1 - 4.5 range. Does Icom have a rep of making lesser quality rigs? Some comments on eham would leave one to believe that is the case. Although I'm really happy with my Icom R-75. It's right next to my Kenwood R-5000 and does just as well on most signals.

thanks!

Thanks for the pointer to the reviews. I will start there.

The fundamental differences I see right off the bat are: The ICOM can do
1.2Ghz
(with an extra $$ module) but not HF. The Yaesu can do HF, but not
1.2Ghz.

Thanks again for the help.

Yes. Second differences are that dsp modules are optional in the icom.
Yf you search web pages in the google (www.google.com) with the
keywords "IC-910H satellite" and "FT-847 satellite" you get much more
aswers and the links for the ft-847. So the ft-847 is much more polular
rig, even in the hams who was only tech license (50MHz and up).

I think that I will buy ft-847 in the next few months.

If you are planning to buy new vhf/uhf(/hf) rig, then you should
also check Kenwood TS-2000. It is more expensice but it have build in
TNC and packet cluster receiwing capability without tnc and or computer.
Kenwood even have 1.2GHz module in option. (that was tested in QST in the
few last issues)

I have all those rig manuals in my website, download them and read them.

never owned an Imax but i cant complain a bit about the performance of
the "junky" A99 i have worked all over the world with it on 10 meters
and 17 meters and its only 8 feet off the ground
and i was assuming the gentleman who posted this message was short on
funds and the A99 is a lot cheaper than the 10 meter ringo or the Imax

364. Re: IC-910H or FT-847 for VHF/UHF/Sat ?

Newsgroup: rec.radio.amateur.equipment
Date: 2003-01-11 13:49:20 UTC
From: W4PHM <W4PHM@ARRL.NET>
Message-ID: <avp75h$q7b$1@slb4.atl.mindspring.net>
Source record: 34686

This thread and this question has been so ongoing that I feel I must set
things straight once and for all!!!!!

Comparing these two rigs is like comparing apples and sofas.

Yaesu makes a great radio here and there, the fact is that when you
try to pack everything into one, you get problems. People often
have service problems with the first 3 years of production of the 847
unless you don't run it at a duty cycle on VHF, UHF to get hot.
The solder joints are not good and the constant expansion and
contraction makes for a problem. Still it is a fun toy.

Personally I prefer to use a nice 821H (or a 910H if I owned one),
which is the precurser to the 810, for UHF/VHF and use a 756 for
HF/6 meter.

Now that is just my opinion.

If I were a big Yaesu fan (I just happen to prefer Icom rigs), then I
would probably run a 920 for HF/6 and then a 910 for UHF/VHF.
Yaesu does not make a base satellite unit that does not do HF!!!

That being the case..... I enjoy my set up the way it is. If I got a great
price on an 847 I am not saying I would not purchase it and use it, I just
prefer being able to run two separate rigs for different purposes.

NOW THE REALLY BIG QUESTION... WHAT IN THE HECK
WOULD I DO UP AT 1240 MHZ!!!!! THERE IS NO ONE THERE!!!

Are you an authorized Yaesu dealer? If not then these radios do not
have any warranty. The certificate is useless without a receipt from
an authorized dealer. With the exception of Radio Shack none of
the ham radio suppliers have a transferable warranty.

hi,

Get a good cleaner, like Deoxit brand from Caig Labs, just a little is needed,
will cleanup all the switches and pots, no more pops and scratches for this
fine radio. Cleaned up my used 530s just fine !

Hi John,

I own a TH-F6A as well as a Yaesu VX-5R. Both are fine radios and will serve you well. The Yaesu's a bit cheaper, I think. Be sure and pick up a different antenna though- the MFJ 1712 (for the Yaesu) or Comet HT224 (for the Kenwood radio) are good and will work much better than the stock ducky in both radios. And be sure and get the programming software- it's about $40 and will save you a ton of aggravation.

377. RadioShack BTX-122 Programming help needed

Newsgroup: rec.radio.amateur.equipment
Date: 2003-01-11 19:39:12 UTC
From: "John L. Wilkerson Jr." <johnwilkers@att.net>
Message-ID: <Xns930094FA86416johnwilkersatt@204.127.36.1>
Source record: 34599

I have a pair of RadioShack BTX-122 VHF handhelds (Cat # 19-1203, FCC ID# AAO19-1203)

They are preprogrammed for 2 frequencies and a PL tone. I wish to change these frequencies. The radioshack website has no such instructions online. Does anybody know how to reprogramm these? They have a single 10 switch DIP for programming.

Thanks!

Here is a link to all the documentation on the Radio Shack site for
catalog 190-1203.
http://support.radioshack.com/support_electronics/16672.htm

The DIP switch is for programming the PL tone, which they say should
be done by one of their repair centers. No details are given to do it
yourself. If you are comfortable opening the cover and doing this
yourself, I imagine that noting the original position, and changing
them to match each other would do the trick. This might be sufficient
if you are getting interference from other users. If you to match a
third radio and it's PL tone, it gets a little trickier

There is no provision made for changing the frequency. While it might
be possible to find a mod to do this, it would end the type acceptance
of the unit, and it would not be legal to use it on another frequency.
There are many public service and emergency frequencies in that range,
so the odds of annoying another user who knows who to call at the FCC
are very high.

Note also to use these legally, you need a business band license from
the FCC.

Heating up zinc plating can give off some seriously nasty fumes, and
generally it is not recommended to weld, braze or solder zinc-plated
(aka galvanized) parts.

Well, you can always get a mobile rig, plus a small power supply, and run the rig at your residence -- with a small indoor antenna, you'll be able to hit most local repeaters. Then, when it gets warmer, you can go mobile with it.

The only reason I'd recommend this direction -- mobile rigs have a lot more power than the ht's, and they are a hell of a lot easier to operate, especially if you have big fingers.

To each his own, tho'...

Icom has a reputation for quality. Period.

That's not to say it's always the best brand for a particular situation, but they are well made.

Have fun!!

Currently, true. Not true if you're looking at the entire line, as the FT736R will do sat and 1,2 ghz. If you're considering used gear don't forget the FT736R.

A lot depends on how you will be using it. If you plan to install in
your car come Spring, setting up so can have a PS and antenna hookup
in your house, and an antenna and direct power connection in your car,
you could move a unit back and forth.

If you are interested in activities like hiking with your ham radio,
or helping with Public Service events, you will need an HT.

Realistically, you will probably end up with both.

Get involved with a local radio club, and many people there would be
happy to help. You could start with the one sponsoring your test.

Each has its particular strengths, but a unit from one of the "Big
Three" will do you quite well. Yaesu, Icom, Kenwood, in no particular
order. There are others worth considering such as Alinco.

Talk to people, and also check out reviews online and the mags.

Happy trails,
Gary (net.yogi.bear)

Both vendors sell them as "state of the art" satellite rigs.
Yaesu think that ft-847 is the "new" ft-736r ...

> try to pack everything into one, you get problems. People often

That is so true.

> Personally I prefer to use a nice 821H (or a 910H if I owned one),
> which is the precurser to the 810, for UHF/VHF and use a 756 for
> HF/6 meter.

Good choice, but 756 is not quite portable. (Ok, ic-746/7400 is little
more portable). Right now I have ft-817 for 144MHz and 50MHz.
... just add power amps and go...

> NOW THE REALLY BIG QUESTION... WHAT IN THE HECK
> WOULD I DO UP AT 1240 MHZ!!!!! THERE IS NO ONE THERE!!!

That may be true there where you live... but the idea is
use it in local activity contests and satellite working, ie AO-40
L-band uplink without tx converter (and extra cables etc)

Anyone else have a long backorder from Universal Radio? I ordered an FT-2600M in the middle of December and still don't have it. Called them and they said to wait a little longer for them to get it back in stock... now its been another 2 weeks, so I emailed them. Still waiting for a reply on that.

I myself live in the NE, outside Providence, RI. I recieved my license in the middle of December (last month). I have a power supply (20 amp) and radio, 2 meters, FT-2600M, on order. Universal Radio is taking forever to ship, so I have not used them yet. 2 meters seems to be the most popular up here, if you want a HT, I reccommend a 2 meter one.

They may be close to replacing it with a new model, but there was a
great price promotion coupon which expired 12/31/02, took the price at
HRO down to $114 or so.

I put in an order at the sale price, but they were telling me that no
one would have them in stock until late January.

Not a whole lot. One thing I remember is that the GX II has many
more memories than the 8 in the GX model. Also, just wanted to point
out that the FT-840 is just a next generation of the FT-757, and very
similar, in case you were interested.

Copper will not solder to steel. Also you can't weld Copper. If you really need to have an electrical contact, I suggest drilling holes and use bolts to attach the two. Also since steel and Copper are very dissimilar metals, you will get galvanic corrosion and your electrical connection will eventually be lost. The corrosion speeds up as it gets wet.

> a demo air conditioning system?

I wouldn't. How would you realistically demo a radio in a shop which will be lucky to even have a decent antenna. I'd never want to demo a radio in a store. I'd find people that already own them and get their views. I want to know if they hold up. What the weak points are. Most dealers will tell you it's the best thing since sliced bread, even if it's really a dog. I don't really blame them. I probably would too, if I had to sell the puppies to make a living.

>
> Presumably from your context we are talking about industrial grade

No, actually most is residential. And again, one wouldn't, unless you can find a fool to loan and install one. Maybe you could demo a window unit...
>
> Also as an aside, why did this get splattered all over usenet when it

Duh...Between the 3 people that make our company we have 104 years combined experience. References? We have them out the kazoo going back to the late 40's.
Heck, a large portion of our past customers are dead and more keep dropping out every year. But getting back to radios, being able to demo one in the store means nothing to me. I have better ways to decide. I won't be buying the radio I demo anyway, unless I get a "pre-nosepicked" discount on the one I get to play with. I'll buy me a fresh one in the box and "demo" it at home on decent antennas and in the environment I'll be using it in. If it fails my test, I'd just send it back and get a refund. No problem doing this if you pay with a credit card. But I haven't had this problem yet, because I thoroughly research the radio and know what I want before I even think about talking to a dealer. Same way I build my puters every time I upgrade.

Using store demo's as a guide would be useless to me, unless they will let me run benchmark tests, etc in the store. The technology changes so fast between each upgrade, I'll spend 2-3 months researching chips and boards before I decide what to build up. The only thing I talk to dealers about is asking them if they have what I want in stock.

You don't get out much, do you?

Ham Radio Outlet, Denver, has antennas available and connected.

Ten-Tec asked me what my antenna preference was when they put me in
their demo/evaluation room.

Fair Radio Sales had antennas available and connected them when I
asked to test a radio there.

> I'd never want to demo a
> radio in a store. I'd find people that already own them and get their
> views.

I do. But I want firsthand experience, too, when spending that kind
of money. I respect people here and people who publish books, but
their views on what is good and bad are very different than mine.

> I want to know if they hold up. What the weak points are. Most
> dealers will tell you it's the best thing since sliced bread, even if
> it's really a dog.

You don't get out much, do you?

HRO has, more than once, steered me in different directions than where
I was looking, toward a cheaper product. Toronto Surplus and Supply
has always been frank with me in the pros and cons of the radios I'd
be interested in purchasing from them. And I've yet to purchase from
them. However, they are at the top of the list of "go to" companies
when I want to make a purchase.

An ethical business looks beyond one sale. A business in a specialty
market does the same.

> I don't really blame them. I probably would too, if
> I had to sell the puppies to make a living.

Another reason I wouldn't buy from you.

Shortwave Radios aren't Used Cars. Shortwave Radios aren't Used Cars.
Shortwave Radios aren't Used Cars. Shortwave Radios aren't Used Cars.
Shortwave Radios aren't Used Cars. Shortwave Radios aren't Used Cars.
Shortwave Radios aren't Used Cars. Shortwave Radios aren't Used Cars.

Then you *do* go beyond the sales brochure? Or do you just vent the
same bovine scatology at potential customers as you just did here?

Here's a hint: If a vendor talked to you the way you address people,
would you buy from them?

Ya know, I almost hate to do this, but I can't resist. Those
considering paying for a manual in already-admitted questionable
condition should first take a very close look at this link.

http://www.kantronics.com/downloads.htm

Scroll down a bit, and you'll find links for the manuals for all
the standard Kantronics VHF/UHF products, in .PDF format, freely
available to download.

Rich,

Has the software disks (VX-5R) you are selling been loaded on to a computer? I have the software for the FT-2600 and after a computer crash I was not able to load the program a second time. Seems there is a type of "copy protection" on it.

I still have a HTX-202 that I purchased in 1992. You can buy one used for $75-80. They are easy to use and easy to program. Easy to find ext mic's, replacement batteries, antenna's, etc. And best of all you do not need to carry the operating manual around with you to figure out how to use it. Then after a few months when you figure out you really need a 6, 2, 440, etc. rig you will have experienced what a HT can do.

just my thoughts,

>Is there a special solder or flux to use?

I continued my search of the net and learned that zinc-plated steel
can be readily soldered. It is done by the stained-glass hobbyists,
and by hams who solder to a chassis. However, acid flux must be used.

This means that I will have to wash the joint and coat it with epoxy
or similar to minimize corrosion.

Bovine scatology? Vent? I'm just giving my opinion on the worth of
being able to "demo" a radio in a store. I don't need to do it.
Just because "I" don't need to do it, is no reason to get your panties
in a twist. I could give a damn what you do. I never said you couldn't
go to a store to try radios. I just said it's a waste of time as far
as I'm concerned. Note the "I" ...
>
> Here's a hint: If a vendor talked to you the way you address people,
> would you buy from them?

How do you know how I address people? I haven't said anything out of
line to you or anyone else here. In fact, I would see it the other way
around. You seem to be the one with the smartass attitude. I'm just
stating my opinion. If you don't like my opinion, thats just too damn
bad. I would consider that a personal problem. How do you like that
address? BTW, consider this the end of my views on this matter. I
have better things to do than argue about how you like to buy your
radios. MK

After 20 years of welding, brazing, soldering, as my profession, I can tell
you that copper CAN be joined to steel, using high silver solder/braze
filler. The metals must be very clean, and a silver brazing paste flux must
be used. Tempature control is a critical item, to much heat on the copper,
and it will oxidize, to little heat on the steel, and it will not bond.
While I was in the Navy, I brazed copper/brass to steel and stainless steel
every day, it just takes special solder/braze filler rod and flux, and
really good heat control.
I usually takes brazing rod that has about 10% silver content to do it.
Known as "Grade 5" solder. For ferrous to non-ferrous metals.

Recently obtained a secondhand RE2100 unit that I'd like to use as a stand-alone receiver.

It came without any connectors or manuals.

Who could help me out setting up this receiver?

I need the connector pin information and do I have to bridge certain pins to let it work stand-alone ?

Also I'm wondering if it works on 24V only or on 12V as well.

Any help very much appreciated !

Regards, Paul

I've done some of this successfully also. But I'm curious about the safety comment Gary S. made.

A co-worker of mine once ended up in the hospital after welding galvanized parts. Zinc is highly toxic.

That kind of work (welding) is supposed to be done in a high-draft hood. But lower-temperature soldering/brazing is done all the time without such precautions.

Does anyone know the trade-offs here? At what point does working with zinc become unsafe?

... Rich

A light breeze blowing away from the welder will be enough to keep you safe.
If your doing this inside a building, you should have an exhaust hood of
some other means of ventilation, but a strong air flow is not needed, just a
steady gentle breeze.
Also, KEEP YOUR HEAD OUT OF THE FUME PLUME!

As A guess. I would venture to guess that it is to ground a tower.

Hams don't typically solder to a chassis. They drill a hole, and use a bolt and nut to hold a wire terminal to a chassis.

Yes. I want to experiment with two Slinky toys added to each side of
a 40M wire dipole (making for four in all) to try for decent
performance on 80M and 160M using balanced feed. Slinky's are around
70 ft of wire. They cost around $2 each and are a breeze to stow.

The Slinkys are zinc-plated steel. I want to ensure good connections
by soldering on short copper leads with eye connectors to be bolted
together.

I would use ground clamps on a tower, and coat the connection point with conductive grease and cover with the silicon tape that bonds to itself to form a watertight seal.

*** post for FREE via your newsreader at post.newsfeed.com ***

So the FT-2600M is discontinued? I looked around and saw the coupon and placed my order.... best 2 meter only-rig I could find within my budget, yet such a nice radio. When I called them they just told me that there had been no shipments from Universal that included that radio.... So yesterday I emailed them. It will be my first radio.

Weren't you the one venting about people who do exactly that? If I go
to a store expecting to rely on their expertise and infrastructure, it
is worth it for me -- even in the narrowest, greediest sense -- to
make sure that they are there in the future. So that premium of $30
or so on a $2000 item works out just fine.

But forget the greed angle. For me, it is just plain ethical to do
that. People who go into stores to examine something and then buy

online to skip sales tax, get the absolute cheapest, etc. are the
lowest of the low.

>
> Well , good for you...

Yes. And good for anyone doing business with that salesperson. And
good for that salesperson. And good for HRO, Denver and TS&S to have
sales people with a decent outlook. In the case of HRO, it
counterbalances the one jerk who leaves many so bitter as to not go
back.

> >

But your attitude is the classic stereotypical used car salesman.
Screw the customer good and hard, leave nothing on the table, and who
gives a ratfark about future business. You are revolting.

>
> How do you know how I address people? I haven't said anything out of
> line to you or anyone else here.

I would suggest that you reread what you type.

> In fact, I would see it the other way
> around. You seem to be the one with the smartass attitude.

Yes, towards you, and when I lose my patience. That is one of many reasons I am not in the sales field. While I have patience with people who want to learn and are interested in doing so -- I was a very atypical system administrator, once upon a time -- I have no patience for people truly looking for something for nothing, or utterly blinded by greed as to be willing to sell, well, air conditioning to eskimos.

> I'm just
> stating my opinion. If you don't like my opinion, thats just too damn
> bad. I would consider that a personal problem. How do you like that
> address? BTW, consider this the end of my views on this matter. I
> have better things to do than argue about how you like to buy your
> radios.

Yet you are wasting your time doing so.

No, I don't like your opinion, and you can take that or leave it as you wish. But your job/career choice clearly involves interacting with the public, and you don't seem to have the temprament for it. Mine, by contrast, involves interacting with technical specialists both inside and outside of my immediate company. I stay out of sales, marketing, and dealing with those who are actively willing to understand.

Since you don't want to waste your time talking about this, I'll save you the trouble and killfile you now.

Hi,
I'm having a problem. I installed my htx-202 in the car, and I'm getting a pop, scratching noise on the speaker of the ht. When I turn off the car, the noise goes away. Its only on the speaker and not when I'm transmitting.

Any ideas ?

```
Use liquid or paste acid flux, or acid core solder.
Clean the joint well after soldering.
Use a large iron, or a small propane torch.

Have done this many times to make up VHF or UHF ground plane
antennas using various kinds of steel rod and copper clad ground plane.

How about a crimp on terminal? I don't remember how tin and zinc fall on the galvanic corrosion table, but you may be able to get away with that. Especially if you can get a good tight crimp, and can minimize mechanical movement between the two parts.

Just a thought.

Given the proliferation of ham stores out there, there's no reason to have your order hung up at one store. Don't wait for them to email you. Just call Universal Monday, cancel your order, and call one of the big suppliers like Amateur Electronic Supply in Milwaukee or HRO, Burghardt, whomever. I had slow delivery problems with Universal on an antenna book, and just cancelled and got immediate delivery elsewhere.

The DVS-2 is a digital voice recorder designed especially for SSB, AM, and FM operation with the new model Yaesu transceivers such as the FT-1000D, FT1000MP and FT1000MP Mk V having a special jack for connection of the DVS-2 on the rear panel. It offers two independent functions: recording received signals for playback later in the loudspeaker/headphone, and recording signals by the microphone for playback later over the air (during transmission). Each mode uses its own memory, so both modes can be used to retain data at the same time.

Unit is in very good cosmetic and working condition.

Asking $125.00 plus shipping/insurance from Los Angeles.

mAximo wrote:
Dave Shrader (david.shrader@attbi.com) muses:
> 2) Did Jesus do/claim what he did for fame/ financial gain/ political
> fame/ etc.? Jesus was and remained poor through his life. He knew that

\Only Mary was poor, and then only technically, since religion is big
\business. In order for her to live at the Temple, she must have been from
\the Levites who had no property of their own. Joseph on the other hand was
\a building contractor, which was a medium-sized business, and he was middle
\class. Joseph's uncle, Joseph of Arimathea, was an official Roman supplier
\for various base metals, which was big business, and made him wealthy. He
\then adopted Jesus when Joseph died, so Jesus did not become poor due to
\the death of Joseph, as is commonly taught.

Make that: Mary's uncle, which would easily explain how JoA got to be
a councilor in the San Hedrin. Dr Scott has been covering this subject
lately, and mentioned that Jerome and the Vulgate claim that he had
the position of 'decurio', and alleged this made him equivalent to the
Minister for Mines. But whether his position was in the private or public
sector, he was paying the salary of Pilatus who "readily gave up the body"
of Jesus probably for that reason, rather than the Roman law cited by Dr
Scott that executed criminals were only to be handed over to the nearest
relatives. Just as w/the question of blasphemy, burial would have been
also left to the San Hedrin, in place of any Roman law. Thus, Joseph of
Arimathea's position w/in Roman society as well as the San Hedrin should
have been the official reason for Pilatus to hand over Jesus' body.

Dr Scott usually gets his history right, but in this case, applies it
wrong. While JoA was legally a near relative, Dr Scott forgets to
mention that JoA had adopted Jesus after the death of Joseph, when
pointing out that Mary did not object to the arrangement because he was
her uncle; but as a great-uncle to Jesus, he would not have been a near
enough relative to storm into Pilatus' compound and demand the body. As
the legal, adoptive father, he would have qualified as a near relative.

Well, hows this:
I listen on my scanner to some of the VHF ham bands and see that 2 m
IS the most active in this area. I COULD be more helpful if Universal
had shipped my rig, but thats not my fault. I have listened to 2
meters and litened into repeaters since 1999 when I discovered the
amatuer radio service. Remember, finding band activity dosnt require
any more than a *scanner*.

Do you have a need for a high-quality SMA-to-BNC antenna adapter that
is custom made to fit and protect your H.T. or scanner radio?

Adapter allows you to:
Quickly change antennas to base, mobile or different style use.
Use the more popular and wider selection available of BNC antennas.
Prevent chassis connector wear or from coming loose due to antenna
changes.

Adapter features:
Gold plated contacts with a teflon insulator.
A low profile design with a rubber covering for a factory antenna look.
The rubber base seals to the top of the radio with no spacers needed
for moisture and dirt protection.
The base also provides an excellent support for any length of antenna
or application.
No need to remove adapter once installed to make a quick and safe
antenna change.

Sizes to fit radio models:
Yaesu: VX-5R, VX-7R, VX-1R, FT-50-R, VX-10, VX-150, VX-110,
VXA-100, VXA-120
Icom: IC-T90, IC-T8A, IC-T81A, IC-Q7A, IC-R2
Kenwood: TH-D7, TH-G71, TH-F6A, TH-F7A
Alinco: DJ-V5, DJ-X3, DJ-S40
Standard: C508A, C510A
Radio Shack: HTX-420, HTX-400, HTX-245, HTX-200
Aor: AR-16

Previewed in the May 2000 Issue of CQ Magazine, and the Nov. 2000
Issue of QST Magazine.

$11.95 + $1.50 S+H(One to unlimited)

Hi

Kenwood ran their best sales during May last year during the Dayton Hamfest.
I bought my TS2000 for 1599.00. I would suggest that you check all the
major ham sales outlets, some do not pass along all the coupon discounts
that are offered. Last year AES had the best deal at Dayton by $50.00 which
was an additional Kenwood discount

I would have done that a week ago, but I can't... it was a $100 off
coupon that expired 12/31 and they are honoring it ONLY becuase I
placed the order before 12/31/02. So if I cancel I pay $100 more
(quite out of my budget) and that would be IF I could find it (whoever
said it's discontinued). The last time I called (last Monday) they
just told me, "...we recieved a shipment from Yaesu yesterday, but
that didn't have any FT-2600Ms in it...".

You can go fuck yourself. I have never ripped off anyone in my life. I
don't screw customers, and I almost alway get repeat business. Why?
Because I'm damn good, thats why. You can take your bullshit and stick
it where the sun doesn't shine. Do you have proof I have ever ripped
anyone off? Of course not. If we are so bad, how have we been in
business for a combined 104 years? You are lucky I don't sue you for
libel.

I did yesterday. I don't see ANYTHING out of line. What have I missed?
Anyone else get their panties in a bunch because of anything I've
said? If so, point me to it.

I am not in the sales field either. The "old man" does all the sales.
I just do the work. So that theory along with most of your other ones,
does not flush.

While I have patience with
> people who want to learn and are interested in doing so -- I was a

There are no eskimos in Houston. Something for nothing? What in the
hell are you talking about? I pay good money for everything I buy.
Greed?? What greed? Show me anything you can find that shows me to be
greedy. I'm greedy because I like to beat the 8.5% sales tax? What is
it?
>

Yes I did. I don't like being inaccurately portrayed. In fact, I view
pretty you much as a damn liar, or a maker of fanciful tales when it
comes to my life. You don't know me from jack...You better quit
accusing me of illegal practices if you know what is good for you.

>
> No, I don't like your opinion, and you can take that or leave it as

What gives you that idea? None of our customers have complained about my temperament. You are just making up a bunch of horsecrap to suit your needs.

> Mine, by contrast, involves interacting with technical specialists
> both inside and outside of my immediate company. I stay out of sales,
> marketing, and dealing with those who are actively willing to
> understand.

So? I don't do sales either. Whats the point?
>
> Since you don't want to waste your time talking about this, I'll save
> you the trouble and killfile you now.

Fine. I've about shot my wad talking to a asshole who makes up stories about me just because he doesn't like the way I buy radios. Like I told you yesterday, you buy your radios how you want, and I'll buy mine how I want. If you have a problem with that, well, fuck ya then. You seem to be about a prime time asshole, so killfiling me will be no sweat off my ass.

RTSystems copy protection and piss poor support have been
a subject much discussed here and on the Yahoo groups. Several
of us who have an interest have dissected and defeated the RTSystems
copy protection. If you still have the original disk and serial number
you should be able to reinstall it with no trouble. If you want to
make a backup copy of your RTSystems software there is a program
called Winimage which will do a fine job. If you use diskcopy it will
not install because the disk serial number will change.

OK, lets take a look. I post from google, so I see everything no
matter if old or not.

Mark Keith, that obnoxious foul talking asshole wrote:

I agree really, and can't really blame them for the amount of money
they make on the radios. It's just like cars. Once you drive one, IE:
"open the box" it's lost a good bit of value. Sure, most car dealers
let you drive "demo's" but they have big pockets in general and can
afford to take a hit on a demo car once sold. Most of these radio
dealers are not in the same position to lose money. Many of the
smaller stores are lucky to stay in business at all. If you display a
new $4000 radio, you won't be able to get near that amount once you do
sell it. And it will most likely be scratched, etc. People don't give
a hoot if they don't own it. I know I would never buy a demo unless it
had a deep price cut. As far as being able to try one, I ask for
opinions on the air from users, and scan the net for info. I bought a
ic-706mk2g on the net, and I'd never tried one at all, but I already
knew what I was buying from previous research. Sure, it would be nice
to be able to try a high $$$$ rig, but I don't expect the dealer to
take a bath just to allow me to do this. It would cost them several
hundred dollars to demo a high end rig. No one wants to buy a new
radio in anything other than a sealed unopened box. MK

I do. More than one. I sell air conditioning/heating/refrigeration
equipment for one thing. And I sure as hell don't supply demo units.
If an equipment co. brochure is not good enough, they are shit out of
luck. And I don't keep a stock of units either. Only service parts.
Only when someone actually wants a unit, will I go buy one. MK

I wouldn't. How would you realistically demo a radio in a shop which
will be lucky to even have a decent antenna. I'd never want to demo a
radio in a store. I'd find people that already own them and get their
views. I want to know if they hold up. What the weak points are. Most
dealers will tell you it's the best thing since sliced bread, even if

it's really a dog. I don't really blame them. I probably would too, if
I had to sell the puppies to make a living.

No, actually most is residential. And again, one wouldn't, unless you
can find a fool to loan and install one. Maybe you could demo a window
unit...

Why are you asking me? Ask Hudson whatever his name is. He seems to be
the one that added more groups. I didn't originally post from r.r.s.

Duh...Between the 3 people that make our company we have 104 years
combined experience. References? We have them out the kazoo going back
to the late 40's.
Heck, a large portion of our past customers are dead and more keep
dropping out every year. But getting back to radios, being able to
demo one in the store means nothing to me. I have better ways to
decide. I won't be buying the radio I demo anyway, unless I get a
"pre-nosepicked" discount on the one I get to play with. I'll buy me a
fresh one in the box and "demo" it at home on decent antennas and in
the environment I'll be using it in. If it fails my test, I'd just
send it back and get a refund. No problem doing this if you pay with a
credit card. But I haven't had this problem yet, because I thoroughly
research the radio and know what I want before I even think about
talking to a dealer. Same way I build my puters every time I upgrade.
Using store demo's as a guide would be useless to me, unless they will
let me run benchmark tests, etc in the store. The technology changes
so fast between each upgrade, I'll spend 2-3 months researching chips
and boards before I decide what to build up. The only thing I talk to
dealers about is asking them if they have what I want in stock.

Being defective has nothing to do with it. I don't want a radio that
some nosepicker has had his greasy fingers in. Or scratched, or even
breathed on overly hard. I expect nothing less for something new I buy
, and pay full price for. Some of the tech's scratch the radios just
moving them around on their test benches. They don't care. They don't
own em. I don't want anyone scratching my radios. That's my job if it
has to happen.
I know one dealer that checked and "opened up" the type radio that I
bought, before they shipped them out. I nixed that company just for
that reason. I don't want anyone touching my radio after it's been
built, except me. Now, if they want to sell me a " pre-nosepicked"
radio for a greatly reduced price, well ok then...To each his own in
this regard... If I get a DOA, I'll make them send me a new one. If it
dies later in warranty, I want the company/factory to fix it, not the
dealer.

No, I don't go to ham radio stores.

I'm not in Denver.

I get out plenty, but I don't go to many ham radio stores. Why should
I? I can order the stuff on the web and beat the sales tax.

Well , good for you...

So????

Who cares...I don't need your money.

Who's talking about used cars? I haven't mentioned used cars.

Bovine scatology? Vent? I'm just giving my opinion on the worth of
being able to "demo" a radio in a store. I don't need to do it.
Just because "I" don't need to do it, is no reason to get your panties
in a twist. I could give a damn what you do. I never said you couldn't
go to a store to try radios. I just said it's a waste of time as far
as I'm concerned. Note the "I" ...

How do you know how I address people? I haven't said anything out of
line to you or anyone else here. In fact, I would see it the other way
around. You seem to be the one with the smartass attitude. I'm just
stating my opinion. If you don't like my opinion, thats just too damn
bad. I would consider that a personal problem. How do you like that
address? BTW, consider this the end of my views on this matter. I
have better things to do than argue about how you like to buy your
radios.

This includes my replies to the posts where you were in the process of
pissing me off. Note my restraint against even your horse shit
comments.
In all my posts leading up to that stage, if you can find a single
comment where I was rude, snippy, obnoxious, etc, etc, to any of these
people, I'll drive up to CO. and lick your ass. I used a couple of
cuss words in one post, that some might find offensive, but that was
in no way directed at the other poster. I'm being obnoxious to you
now, but you earned it. I AM rude and obnoxious when I have to read a
load of blatant horseshit. You want to go to a store, and touch and
feel? FINE. Knock yourself out. Myself, I don't need anyone to hold my
hand when I choose or buy a radio. But thats me. I'm not saying anyone
else has to operate like that. This is REALLY the end of this turd
hunt as far as I'm concerned, unless you start lying or making up
stories about my business again. In that case, I'll probably just pull
a "Chip" and sue your ass.

Hi all...

I'm still trying to find some of the original radio
equipment for my airplane (an Aeronca L3B "Grasshopper")...

The specific equipment I still need is:

AVT-15A Transmitter with Remote Control Panel
AVA-120 Trailing wire antenna (will trade for Lear RH-4)
AG-40B Wind generator

Any help would be appreciated

It sounds, then, like it's more of a Yaesu delivery problem than a problem with the store.

I saw someone selling two of these rigs, new, in one of the newsgroups a couple of days ago -- $280 for the two, so he may have been trying to make a little money on the rigs, if he got them for $109.

You might want to confirm with the store that the rig has not been discontinued so you won't be left hanging. Otherwise, good luck...

.....Ok, just got off the phone with Universal.... The guy looked and said
yes, they are discontinued, but, all backorders will be honored and the
radios will be shipped as soon as they arrive at Universal. He had no idea
of a time-frame of when they are likely to arrive...

481. Need advice on Yaesu 3000m (APRS)

Newsgroup: rec.radio.amateur.equipment
Date: 2003-01-14 11:53:51 UTC
From: xkecho@lycos.com
Message-ID: <451d4bc5.0301140353.67c690f2@posting.google.com>
Source record: 34513

A good friend got interested in my APRS station (Ft-50RD and Kantronics KPC 3+) and started looking for some equipment to put his own together. I have several hundred bux invested in mine, but he discovered a radio that apparently has a built-in TNC that lists for $399. Its called a 3000M by Yaesu. He saw a used one offered for $200 and then discovered that AES had a price on new ones for $199! Only problem is... they don't have any more of them. What's the story on these? Are they being phased out as old stock or what? Anybody have any experience with using one with APRS? Know where one can be bought for the $199 price? Thanks, Justin

482. Wanted: CITI-FONE CD-7 manual, schematic, other info

Just bought a Citi-Fone CD-7 tube-type base station CB radio
and am looking for any kind of service information, manuals,
schematic, and so forth. There is no Sams Photofacts book
on this model (I've already checked).

At the very least, can someone tell me what tubes go in it?
All of them are missing.

73,
Dean K5DH

485. FS Icom IC-228A 2 mt Transceiver

Newsgroup: rec.radio.amateur.equipment
Date: 2003-01-14 15:44:19 UTC
From: Charles Hugg <chashugg@earthlink.net>
Message-ID: <nfWU9.9396$Dq.983463@newsread2.prod.itd.earthlink.net>
Source record: 34517

I have for sale an Icom IC-228A 2mt FM Transceiver. The good news is that it is in very nice cosmetic shape. It comes in the original box, includes the mobile mounting bracket, power cord, and the Icom HM-14 Touch Tone Mic with UP and Down buttons. This mobile transceiver runs 25 watts or 5 watts. There is a great Product Review in the January 1989 QST.
Now the bad news. There is no manual and I connected it to a 12 volt battery and reversed polarity! It popped and smoked and of course now does not light up at all. If you are a technical person, maybe you can get it going again.
Oh, if it matters,
the rig was in the"Off" position when I hooked it up wrong.
Price is $45. Thanks, Charlie Hugg, K5MBX

486. FS Swan Station

Newsgroup: rec.radio.amateur.equipment
Date: 2003-01-14 16:26:13 UTC
From: Charles Hugg <chashugg@earthlink.net>
Message-ID: <FSWU9.9454$Dq.988844@newsread2.prod.itd.earthlink.net>
Source record: 34518

I have a number of Swan radios and accessories that I am selling for a friend, who due to health problems is having to liquidate his ham gear. The gear looks good, cosmetically. Some of the cabinets look like they have been repainted. Operationally, most of it is unchecked.
I did plug the amplifier in and it blew a fuse. Items FS are:
1. Swan 700CX Transceiver. Looks complete except no 8950 final tubes.
2. Swan 500 Transceiver. Looks complete including final tubes.
3. Swan 117XC Power Supply, Speaker Console.
4. Another Swan 117XC Power Supply,. Speaker Console.
5. Swan Cygnet 1200X HF Amplifier. Has a new set of four 6MJ6 Tubes installed. Correct Tubes?
6. Swan VX-2 Vox unit.
7. Swan WM 1500 Watt Meter.
8. Swan ST-1 KW Antenna Tuner.
9. Several tubes. New set of 6LQ6s, 2 new 6KD6s, 1 6MJ6, 1 6JS6.
10. copies of most manuals and some original factory literature.
I can take a digital picture of the gear and e-mail to you if your interested. I wish that I could be more specific about the operational condition of equipment. I do know that is has not been on the air in many years. Some of it probably needs some new caps. Price for the entire lot is $875. Thanks, Charlie Hugg, K5MBX

Hello all,
If everybody thinks that, these bands (UHF and higher) risk to be lost for the ham community.
So "use it or loose it" was the motto when I bought my IC-910 WITH 23cm module. I must confess I use it not so often, but when I use it I have a lot of pleasure.

Well, Douglas was open about it. He is the position of someone who has
recently gone through the research for similar usage. The scanner
makes it clear that he has done "field" research on what is typical
for his area anyways.

For many parts of New England, if you were buying a single band radio
in the VHF/UHF arena, a 2M would make the most sense because it gets
the most use. This is from me, and I have been fairly active on 2M for
a few years.

From what I've read, for many areas of the US, 2M is the most active
VHF/UHF band.

BTW, the promotion for the FT-2600 was so popular, that basically no
ham store in the US had them in stock after early December. New
shipments to fill the backorders (like yours or mine) are due in in
late January.

Happy trails,
Gary (net.yogi.bear)

I am looking for the aluminum sheetmetal for the Heathkit SB-220 amplifier. I need the the left, right, center divider and top perforated cover for it.

These are not the outside case but the aluminum panels that bolt to the chassis.

Must not be dented or badly scratched.

Please state price and condition on reply.

I am also looking for any parts that you might have. Switches, chokes, tube sockets and etc. Yes, I have already checked on eBay.

I made a trade with George a few months back, my Bearcat 895XLR for a used Sony 2010. We kept in touch for a while, then I stopped hearing from him. I have not received the 2010, and don't even know for sure if he received the scanner. If anyone knows him, please contact him and have him get in touch with me. I stop short at this point of calling him a fraud, since almost anything could have happened to the 2010 between Britain and here, but it would bolster my confidence in my fellow hams if he at least acknowleged my concerns.

From: falster762@aol.com
Message-ID: <20030114223053.06142.00000888@mb-dh.aol.com>
Source record: 34528

Please be aware that before you donate any gear to a non-profit organization like the Radio Club of JHS 22 in NYC that they are obligated by law to disclose to you, where the donations are used. It is also punishable my heavy fines if not disclosed in 30 days. See>>
http://www.irs.gov/charities/article/0,,id=96430,00.html
There is so much info available that you need not donate to a scan group who's only purpose is to defraud you and the ham community out of thier resources only to sell them on EBAY.
I know you'll say, "heck, he must be legite, he's been around for over 20 years".
Right and so was Capone!
You can do another thing, ask Joe Fairclough the President, "what has he really done for children" except being the smoothest BS'er that ever came round the pike!
I bet you get more nonsense? He will change the subject real fast too!
God, we should hate these guys that run Non-Profit orgs. They take your cars, your home & amateur gear if you let them & no one benifits except them.
They don't even have to claim less then $25,000 with the IRS :-(
Do a search, you'll get an Eyeful!
Be Smart, hams are smarter then this, help expose this thief before he retires with a NYC teachers pension on top of it all!
More to come.
Brian

Hi jc,

Yep thats what it has come to. If you watch eBay as much as I do you will see a pattern of the same sellers selling the radio equip. week after week, claiming there no radio people know nothing about it so it is sold as is. I have seen a couple of auctions with so much flame damage under the hood in the picture my 4 year old could tell you it needs help. Most (not all) but most of the radios being sold without power supply are being sold as is becuase "we have no way to test it but it came from the estate of a SK and we have no reason to doubt that it is fine" watch the sellers a week after they sell this radio and they have the P/S up for bid. What happened with all the SK's did they take the damn power supplies with them? If I am buying a radio through eBay for serious money, first I will only buy it from another ham, second they have to be good in the book, and third i want a phone number. Now I am not saying this to mean calling them all hours of the day and night with complaints but a man that is trying to con you will not want you to have the ability to cause him more grief than he caused you. With this practice I have not gotten burnt yet, when I have asked a few for this info the little details about the condition of the top notch radio come to life. OK off my soap box now good luck hunting and beware.

You are correct!
Some, not all are splitting things up.
It tends to get more money for the seller.
Again, only some do this.

These 12 amp, 13.8 volt, switching power supplies -- made in the UK -- were apparenly popular with the radio control hobbyists a few years back. Maybe for charging, maybe for power. The company has been gone for a few years, now. Are these supplies generally suitable for ham radio usage?

After selling a bunch of rigs, both with and without accessories, I've
come to the conclusion that many hams don't really want matching
components.

Many times I would get an email from a prespective buyer asking
whether I would/could separate the items :) When you think about
it, it makes the most sence, as someone may be looking for just
the rig (for going mobile), and someone may be looking for
just the power supply (to make a matching system). Rarely does
the same person win both auctions (rig and powers supply).

Just my $0.02 worth

I agree jc. What happens if you buy the xcvr and you can't get the power supply? I would never bid on a tube type ham rig UNLESS it comes with the power supply. Also seeing people stripping apart perfectly good receivers and selling individual parts. In some cases the radio is worth maybe $300 or so, but the knob set brings $100, front panel $50 or so.... the sum of the parts adds up to more than the whole. Of course some people need these parts.....I don't have the heart to rip apart a perfectly good rig.
At least be glad radio freaks haven't got to where computer sellers are(yet), most charge $50 -$65 for shipping a 12# item a couple states away. Now that is a rip, and I will never deal with anyone who is obviously raising their profit margin through shipping fees.
While I'm at it, another eBay gripe. Buy It Now- There are at least 10 ebayers that lurk on the radio pages, looking for Buy It Now Items. If the item has no reserve, these broke assholes bid $1, which kills the BIN offer. They NEVER continue bidding for the item. Apparently they cannot afford these items, but if they can't buy it at the BIN price they make sure you can't either. Some people live boring lives and if they don't f**k with others they have no life at all. Why mess with someone if you can't see the look on their face?
Gripe #3. Too much HTML. I want to see a picture of the item for sale- no waving flags, no pictures of the grandkids or the family fleabag dog. If the page takes more than about 10 seconds to load, you probably lost a sale, I've moved on. I'm not an impatient person however I am not interested in pictures and backgrounds that have nothing to do with the item for sale. Save your HTML compositions for your personal web page.

I would have to agree about the splitting up. Some people are only interested in the ps or rig, or bracket, etc. Also, when these items were purchased new, the ps, mobile brackets, etc were all accessories and not included.

Agreed! And another thing on the HTML, why do we have pages so wide
that you need two monitors just to see the whole page. One good smaller
picture is worth a lot more to me than the 1024 x 678 monster that takes
a half hour to download and shows mostly background stuff and not the
item itself. It makes you wonder if these people know how to crop a photo.

Frankly I'd be surprised to find one as building such a Xverter would
cost more than a good used radio. I've seen top-of-the-line pre-warc
rigs (eg, TS120) for $200 here and on eBay. I'd go that route.

Does anyone have any information on the Butternut HF4VS? This vertical was produced from about 1978 to 1981 and was replaced by the current Butternut models.

It is a small (14 ft), lightweight (8 lbs) vertical. Its use was for hams living in apartments, condos and mobile home parks as well as for portable use. I was wondering if anyone had any experience with its operation. How well did it radiate? Any comments would be appreciated.

Mike

Source record: 34451

I have for sale a Knight-Kit T-150 Transmitter. It is incomplete in that it does not have a cabinet and all of the tubes are missing except one 6146. The knobs are original and all there as is the VFO and major components. The Front Panel has one extra hole where someone mounted an additional switch. This is a 150 watt input AM/CW rig from the 50's. I have a copy of the schematic and Operating Instructions. I think that with a little work this rig could be back on the air. Price is $75 plus shipping from 79602.
Thanks, Charlie Hugg, K5MBX

Source record: 34454

I have a nice Yaesu FC-102 Antenna Tuner for sale. This is the one that matches the FT-102 Transceiver. It handles 1200 watts and has a Peak Reading watt meter. It cover 1.8 to 30 MHz including the WARC Bands. There are some scratches on the case, not real bad, and the front panel and lettering is in very good shape. The turner works well. It requires a 12 Volt DC supply to the Peak Reading circuits which is not provide. A small wall wart will work. Price is $195 plus shipping from 79602. Thanks, Charlie Hugg, K5MBX

I am looking for any parts that you might have. Switches, chokes, tube sockets, input network and etc. Yes, I have already checked on eBay.

I am also looking for any of the aluminum sheetmetal for the Heathkit SB-220 amplifier.
I need the the left, right, center divider and top perforated cover for it. Tell me what you have, let's deal

These are not the outside case but the aluminum panels that bolt to the chassis. Well if you had a case, I would be interested in that too.

Must not be dented or badly scratched.

Please state price and condition on reply.

Well ... it might be similar IF they originally sold the car when new
without the wheels and tires. Speakers, power supplies, filters, desk
mics, etc, are things the owner bought separately.

527. High Sierra Antennas (Excellent Customer Service)

Newsgroup: rec.radio.amateur.equipment
Date: 2003-01-15 23:36:18 UTC
From: "Donnie (N4JZH)" <n4jzh@knology.net>
Message-ID: <21sb2v8hi5ecgjq21u9kerondfklsm21oa@4ax.com>
Source record: 34459

Good Evening All,
I just wanted to share with the group my experience with Jim Heath and High Sierra Antennas,
I purchased my HS-1500 from Jim over 4 years ago, I have made several vehicle purchases in the last four years and have moved the antenna everytime I made a vehicle upgrade.
Anyway my 1500 finally developed a problem with the motor, so I contacted Jim and he instructed me to try some simple test all that indicated my antenna needed to be serviced.

I spoke with Jim and requested a box to ship my antenna to him safely BAM! it was at my door,
I shipped the antenna to Jim last Friday, over the weekend he communicated to me via email and
telephone the options I had to get my antenna back in AS-NEW operation for a nominal fee.

My antenna arrived today, I opened the box and to my suprise I found the antenna that resembled nothing to the antenna I sent him. Jim took my antenna and in short order turned my
antenna into his new HS-1800 also enclosed was a new control box to get the antenna up and down
with ease. I called him after I opened the box and expressed my thanks and I asked him why?

His answer plain and simple, I had to completely disassemble the antenna so I decided to give
the antenna a full upgrade, boy did he- internal antenna parts, new motor, control box, paint,
new covers, quick disconnects e.t.c. he in turn thanked me for the phone call. In my closing
comments to Jim I thanked him for his contribution to ham radio with a fine antenna and stated
I don't know how ham radio lasted this long without his antenna.

In closing, I am not a payed employee for HS and have nothing to gain or lose from this thread,
I am a ham in S.C. who spend alot of time in his mobile that requires a antenna that installs
with no problems if you follow the instructions, customer service ''second to none'' and a antenna that will stand up to the normal wear & tear, the elements, minor abuse from tree branches and STILL get a 5-9-9 anywhere I call. If you are thinking about purchasing a High Sierra Antenna, It will be the best money you have ever spent!

Everybody else made their comments, now it's my turn.
I have been looking at several different rigs, but will NOT bid on anything that has been separated. I have to agree with the fellow who mentioned the fact that if you get only the power supply and not the rig, you're stuck. In this day and age you must be able to obtain the complete station. It's not like the old days, when we could run down to the corner radio store and get what we needed. I have been there, and it's not fun. Also, I will look at spelling, and if the seller can't spell, I will not bid. Feedback is one way to make a educated guess as to the fellows honesty as well.

Source record: 34462

I bought my Heathkit station in the 80's.
1). HW-101 Transceiver
1). PS-23 Power Supply
1). HM-102 SWR Meter
1). HD-11 Phone Patch
1). HS-1661 Speaker
1). SB-201 Linear Amp.

When I sold it, I sold the Transceiver, power supply, speaker and a mic as a station..package priced.
I did not include the SWR Meter, Phone Patch or the Linear.

I felt these were not part of the deal.
I sold it as a good working station and shipped with great care to ensure it arrived in good shape.
I hope all hams are as honest and careful.

Gee,

I remember living in Milwaukee, Wisconsin. I'd go into the Amateur Electronic Supply showroom. They'd pull filters out of radio's, sell the power supplies and speakers separately.....this is normal. If I'm looking for a FL-257 filter for my Icom.....where am I going? Gonna buy a new one for $199.00......nope, I went to eBay....did a search for "FL-257".....found one someone pulled from a radio....won the auction for $110.

When you buy a rig, power supply, and speaker from AES or some other outlet
you have to buy them as individual pieces so I see no reason I should not
sell them that way. Also, it is just marketing, many times the person that
wants your radio has no use for another 12 volt power supply. Every time I
advertised a complete station for sell on this news group I have received
Emails wanting to know if I would split up the equipment.

Just my 2 cents worth,
Will K5FM

534. Need help resetting Motorola Saber III

Newsgroup: rec.radio.amateur.equipment
Date: 2003-01-16 02:21:06 UTC
From: Norm - WA3KEY <ndrech@fast.net>
Message-ID: <tn5c2vccsk9d792fkv1ji34rvcmd8bc43d@4ax.com>
Source record: 34466

Despite having identical model numbers of H43SAK7139CN, I attempted to program a newly acquired VHF Saber III with the channel data from one I've had for years and the radio locked up. Apparently the original radio has the scan option while the new one doesn't. The new radio now displays "ERR 0 C1" and refuses to accept programming even from its original saved file or one generated fresh by the RSS software.

Can anyone tell me how to reset the radio so I can at least get it to accept it's original file or start over? I'm not new to programming Sabers and have the correct cables, RIB box and a slow computer that's successfully programmed many Sabers. What's confusing is that the radio displayed "#########" when "read" initially, which according to the RSS means that it IS scan capable. Any help will be greatly appreciated since this radio was purchased for a friend. I've "cloned" another VHF Saber III this way once before and it worked fine. I must have just been lucky. When reading the problem Saber it reports a check sum error when reading the 5D Core and the model number sometimes displays as an H43QXK7139CN even though it's not a secure radio.

Please respond via e-mail to wa3key@fast.net
Thanks for your help.

There is a big differance. Most of the new rigs operate on a simple 12 volt supply. The older ones needed multivoltages of around 800 volts DC, -120 volts DC, and 6.3 or 12.6 volts AC. I bought an ICOM 706 but did not need a supply as I already had a 50 amp 12 volt supply that runs other equipment in the shack. I can buy amyting new for the Icom, but the older gear has been out of production so long it can be difficult to locate what is need for them.

Try verifying the proper hardware model then building and programming a
very minimal codeplug (1 zone/1 channel). If it takes, then go ahead and
build the codeplug you need.

Where have you been? I wasn't talking about the late model rigs. Try to get a National, Drake, Galaxy, and other power supply for a 50's or 60's rig. I only work with tube type rigs, as another part of the hobby. Of course you can get whatever you need for today's rigs.
I suggest you go to ebay and look at some of these old rigs, and see how many have the VFO, speaker, power supply all listed separately. That's only my opinion, and I could be wrong.

good thing you got me in a good mood lester, because....
I will gladly give you the reason, and you know where you can put it.
The amateur radio operators of theSolomon Islands only have available to them
CB radios at this time. The project is to provide a transverter to the 40 meter
band because this is the band that provides the most consistant communication
for the island group. The idea is to do it with scrap parts and available
crystals. However you already knew all this because you are a ham and keep up
with all the current issues.
73s to you too.

It doesn't take more than a week to get a power supply from an amateur radio supply dealership so what's the big deal about splitting it up. In new equipment, many hams do NOT buy the matching set. They might have an Icom radio, Astron power supply and a speaker from their stereo system. Or they might have a Kenwood Radio, MFJ power supply, etc.

When you buy new, you have to buy these items separately so what is the objection to doing the same on used equipment? Why should that be different? Go bid on the matching component and bid high enough to get it if you really MUST have it.

For Sale:

Icom IC-Q7a dual-band (VHF 2 meter/UHF 440 Mhz) compact
handie-talkie ("HT") transceiver / Scanner receiver.
Condition is absolutely like brand-new in every respect.

Scanner receiver covers 30 Mhz to 1300 Mhz, excluding U.S.
cellular frequencies). Has 200 Memory Channels, selectable
scanning. Transmit power is 350mw. on 2 meters, 300mw.
transmit power on 440 band. CTCSS Tone Encoder/Decoder
built-in. Complete with all original Icom accessories (antenna,
belt clip, hand strap, Icom A/C wall battery charger, set of 2-
"AA" rechargeable batteries (also works with 2-AA Alkalines),
all original Icom manuals and original Icom box). I will include
an MFJ compact speaker/mike which is wired for and works
very well with this compact "HT".

This one's just like new; you won't find a nicer, cleaner Icom
IC-Q7a anywhere. Will sell for $85.00 (firm) plus $7.50 for
shipping and insurance, Money Order only, please. Will ship
to U.S. only.

>

Eh?? Try that with my Tempo One!! (Yaesu FT200). The original author was talking about rigs which use HV P/S's, not the ubiquiteous 13.5V rigs commonly found today. Try using an Astron with a Swan 350....won't get far. Many older hollow-state rigs had "external" power supplies which came with the rigs. Drakes, Swans, older Yaesu rigs, Heathkits, etc. don't run on 12VDC internally. Don't see too many 800V P/S for sale from Astron today. Agreed on the 12V rigs, but he wasn't commenting on those.

> my opinion, and I could be wrong.

So what. Maybe the prospective bidder wants only the VFO for example as he already has everything else. Why should he take the whole package? He'll just end up selling the parts that he doesn't need.

If you want all the items, bid high enough to win all the items. Simple solution. If you're not willing to do that, don't bid at all.

They went on close out a while back for $9.95 and some stores
may not have them anymore, if not, the store can order them or you
can get them on the net.

I got six of them when they went on close out just in case they stopped
selling them altogether. They are wonderfull mics and can be used for
HTX-202, IC 02AT, 03AT 04AT and even my brand new IC W32A
dual band ht. The deviation is strong and the audio is great.

The cat # is : 21-1834, that is from the 2002 catalogue listing it for
$19.95.

Try finding the 'Noise Blanker' for the Drake R4C! It isn't available
except in a rig that has it installed.

The pre-solid state equipment was manufacturer unique, required unique
800 VDC @ 0.5 ampere power supplies.

If you want to play with older equipment you better go for ALL of it,
not pieces.

564. Upgrade to XP ok but what about ham software ?

Newsgroup: rec.radio.amateur.equipment
Date: 2003-01-16 19:17:12 UTC
From: Thierry Lombry <lombryt@hotmail.com>
Message-ID: <3e27054a$1_2@news.vo.lu>
Source record: 34496

Hi,

I would like (not done yet) upgrade my Windows Millenium to XP retail (Home version) to resolve some USB problems.

Up to now most of my applications will run on XP according the manufacturers (MS products like Office, some ham software like DX4WIN, my scanner, my ADSL connexion too, etc).

But what about software like DXAtlas, W6EL in their old or last release ?

Do you know some ham products that do NOT run on XP ?

Thanks

Thierry

In order of increasing complexity:

Read the documentation on XP, but it does provide 2 modes to run older
software.

Option A) compatibility mode, where XP emulates some older MS OSs
without you actually installing them. You set the startup in XP for
the OS you wish. Generally best to use the latest one that works.

Option B) multibooting, where you create multiple partitions, and
install different OSs on them. You would need to have an install disk
for each.

See:
http://www.microsoft.com/windowsxp/pro/using/howto/gettingstarted/multiboot.asp

Also, option C) check out a product called PartitionMagic, bundled
with BootMagic, from PowerQuest. This really lets you mix and match
OSs, and will let you have Windows and Linux on the same machine, up
to four different OSs to choose from at bootup.

All of these will probably work for you, but your other needs might
lean you towards one for other reasons.

Happy trails,
Gary (net.yogi.bear)

If you notice, the seller who parts out the speaker and / or power
supply will usually make more money in the long run than if he/she
sold it as a package. If you don't believe this theory, just take
alook at some of the prices people are paying for "accessories."

I am looking for any parts that you might have. Trying to deal
on Parts or whole amlifier. Don't care if it's broken or what.
Switches, chokes, tube sockets, input network and etc.
Let me know what you have.

I am also looking for any of the aluminum sheetmetal that is in good
condition
for the Heathkit SB-220 amplifier. I need the the left, right, center
divider
and top perforated cover for it. Tell me what you have, let's deal

These are not the outside case but the aluminum panels that bolt to the
chassis. Well if you had a nice case, I would be interested in that too.

Please state price and condition on reply.

Just made the upgrade from Win 98 to XP Home a couple of weeks ago. All my ham software worked just fine. If you have problems, it will more than likely be with hardware drivers. The only thing I had to reinstall was EZNEC - something got corrupted and it wouldn't start, but was fine after a re-install.

I don't think any of those were sold with a power supply included: the power supply was an optional extra.

A lot of people already have odd, assorted power supplies and speakers, and just want the rig.

On the other hand, sometimes there is a power supply and speaker that match a rig, brand-wise, and they will be sold as an ensemble. And sometimes not.

Hams are real cheapos, so you can often get more money by splitting the items up, and selling each one singly.

580. Need data files for VX-150, V8000

Newsgroup: rec.radio.amateur.equipment
Date: 2003-01-17 03:18:39 UTC
From: Robert Grizzard <grizzarv@mindspring.com>
Message-ID: <fms70b.332.ln@news.kg7yy.net>
Source record: 34412

[Followup is set to poster. Expiry is set to 23 Jan 03 23:59:59]

Does anyone have a data file for an Icom IC-V8000 or a Yaesu VX-150 they wouldn't mind sharing? I have a project in mind, and would like to get these data files if possible.

I have one of each of the subject radios and would like to use software to program the memories instead of flipping switches and pushing buttons and twirling knobs. The one problem with that notion is the software I have found so far is for Windows and my home boxen run Linux. Guess it's time to break out vi and gcc and hack something together that I can run in Linux that will talk to the radios and program them from comma-delimited text files. I need to know the native data format before I can go very far, though.

I am looking for some specific things in the data file, and may beable to figure out how to do what I need to from the first file I get -- or I may need four or five to get a broad enough view of the data format to know where I need to go to do something interesting with this program. Let me know what you got. If you're willing to set up some things according to spec, let me know that too.

After a recent death of a fiend was left a box of ham bits of which I know nothing about he was one of the old ones G1OLZ if that means anything to anyone but anyway I wish to get rid of them any offer considered buyer to collect or suitable meeting place I am in Hampshire:

Yaesu memorizer FT 227R transceiver appears to work after connecting to a power pack has some sort of mod on the back with a three way switch marked as follows 145.500/144.670/144.850 but I haven't a clue what the switch does:

Howes Communications (possibly homebuilt kit) like the old Heathkits 2-6m Transceiver sockets on it for 2m rig/2m antennae/6m antennae guess some sort of converter box to be connected to a 2 m rig to get 6m frequency

Loads of bits of cable and junk and a desk mike designed for fm/am/ssb

that's it any offers mail me if interested p_wickham@hotmail.com if your serious I can give you my home number so we can chat

You may want to wipe the disk and start from scratch if you have all of your software. Take it from someone with 8+ years in the PC industry, upgrades lead to nightmares down the road. When you upgrade a MS OS, you don't end up with all of the same system files you would have if you built from scratch! Since you are running ME, I would even more highly recommend a wipe and starting from scratch since ME had hundreds of unresolved bugs and stability issues. Just my two cents though. Good luck!

People are always bitching about equipment on EBAY..Nobody forces
anyone to bid on anything on EBAY....Also it seems as if Hams are the
only people dumb enough to overbid on equipment...I never see it in
the areas that I frequent, in fact I have saved substantial amounts on
NEW equipment (not Ham) on Ebay and have only gotten stung once and
that was for only 6.00....SO, instead of whining, bid carefully and
don't bid on something if you don't like the way the seller is selling
it.

hi,

I agree with John, his post below is for real.
We have had our share of problems with 'upgrades', look out for any older DOS programs that
you have, some that shell out to DOS will not function under XP, even on a clean install on a new pc.
We have had to rewrite some steps that use the older move and copy from DOS to use XP standards.

If I did not need to have XP at our shop, I would wait a little longer before I migrate to it.

Good luck with your projects.

roscoe

You will find on ePay that you get way more than what you pay for something as you sell it. It is not a rip-off , it is what people are willing to spend. I put a TS-850SAT/PS-52/SP-31 and MC-60A on ePay for a fixed $1000. It was MINT. It did not sell , so I put in on ePay as a broken up 4-ePay's. Needless to say I sold it all for $1450 when you add it together , Thats $450 MORE than I wanted in the first place...Go figure....I myself have paid rediculas prices for a "certain" item on ePay just because I could not find it anywhere else...

Hi,
I bought a couple of these frs radios for my family who the rest are not hams to run around with. When I turned the ctcss codes off, the auto squelch does not kick in. Does anyone know if there is a way to up the squelch through either a keypad sequence or making an adjustment on the board or maybe have a schematic? Reason that I ask this is that I also have a couple of Motorolas that do not support ctcss.

I received this email today form a YahooGroups Users.
Please pass the word to your friends.

Yahoo has been spying on your computer.
I have finally figured it out and here is their admission
and how you get out of it. They are using something they
call "Web Beacons" to track Yahoo Group users around the net
and see what you're doing -similar to cookies.Take a look at
their updated privacy statement:

http://privacy.yahoo.com/privacy/us/pixels/details.html

About half-way down the page, in the section "Outside the Yahoo!
Network", you'll see a little "click here" link that will let you
opt-out of their new method of snooping.
Once you have clicked that link, you are opted out. Notice the
"Success" message at the top of the next page.

(If this URL doesn't work, then go back to
http://privacy.yahoo.com/privacy/us/pixels/details.html
and you will find Web beacons in the section on Cookies.)

BE CAREFUL because on that page there is a "Cancel Opt-out" button
that, if clicked, will *undo** the opt-out.

I'm certainly has enough power, amp-wise. A bigger concern is whether it is designed to be used with communications equipment -- to not give off bad hash when you are in the receive mode. MFJ and Astron work well with communications gear. I'm not sure who makes the RS supply.

By the way heard an ad on the radio -- Radio Shack is bragging they will no longer ask for your name and address when you buy from them !!!!!!!!!!!!!!!!!!

Have fun...

Bob

611. resonant vs non-resonant antenna (again!)

Newsgroup: rec.radio.amateur.equipment
Date: 2003-01-18 03:01:39 UTC
From: whagen6@cs.com
Message-ID: <20030117220139.05666.00000100@mb-mh.news.cs.com>
Source record: 34443

After having given everything all the consideration it is due, coupled with maxing out the capabilities of my brain, I have come to the conclusion that the only thing a resonant antenna gives one is a particular radiation pattern that may be useful where non resonant antennas may have a lobe and a null pattern that may cause problems, generally speaking. If the only thing that controls power output is proper inpedence matching, and using low loss lines, then I feel the above statement is true. Please feel free to add, delete, or improve on the comment.

$ 425.00 plus shipping or BEST OFFER. No trades at this time

I have 2 (two) Yaesu FT-530's VHF/UHF. One has been mars/cap moded and has 800-950 receive added. The other one still needs the mod done. Early serial #'s Tuning knob missing on both radio's but radio's work great.

Included in the package is the:
Yaesu MH-29 Display speaker/mic (1) (works and looks good)

Yaesu NC-50 Dual Slot charger with FNB-25,26,27 cups (unit works great)
Yaesu NC-42 Desk Charger (Not working)
2 - (two) Master Charger Units (Not working)
12 volt DC cord for FT-530 (1)
Manual

Photo's can be sent if requested. Paypal or USPO Moner Orders accepted as payment.

For Sale:

Nye-Viking model SSK-001 Super Squeeze Key keyer paddle
in outstanding condition. A very solidly-constructed paddle
with substantial weight to it...so it doesn't slide around on the
table while in use. A 3-conductor 1/4" phone plug is wired, for
immediate "plug-'n-play" use.

Check out the details on this quality keyer paddle at:

http://www.mtechnologies.com/nye/

Sell for $40 plus $7.50 (money order only, please) for USPS
Priority Mail, Insured shipping anywhere in the U.S.

For Sale:

Icom IC-Q7a dual-band (VHF 2 meter/UHF 440 Mhz) compact
handie-talkie ("HT") transceiver / Scanner receiver.
Condition is absolutely like brand-new in every respect.

Scanner receiver covers 30 Mhz to 1300 Mhz, excluding U.S.
cellular frequencies). Has 200 Memory Channels, selectable
scanning. Transmit power is 350mw. on 2 meters, 300mw.
transmit power on 440 band. CTCSS Tone Encoder/Decoder
built-in. Complete with all original Icom accessories (antenna,
belt clip, hand strap, Icom A/C wall battery charger, set of 2-
"AA" rechargeable batteries (also works with 2-AA Alkalines),
all original Icom manuals and original Icom box). I will include
an MFJ compact speaker/mike which is wired for and works
very well with this compact "HT".

This one's just like new; you won't find a nicer, cleaner Icom
IC-Q7a anywhere. Will sell for $80.00 plus $7.50 for USPS
Priority Mail shipping & insurance anywhere in the U.S.
Money Order only, please.

I am searching for a specific Heathkit DX-100. It was at the University of Arkansas in the 1970's. It was on loan to W5YM, the University Amature club, by my father. It was probably considered just a boat anchor and the status of it was unknown when it was removed from the club station. If anybody knows of this radio, I would be interested in discussing it with them.

Thanks,

Bill WD5HHH

Cross-posted to:
alt.ham-radio.marketplace,rec.ham-radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.swap

This is a Kenwood TS-520SE ham radio transceiver. The SE model uses AC power only. Includes manual and desk microphone.
I have used this radio quite a bit, made several contacts with it. However, some caveats:

1) The 10m high band section has been retuned and recrystalled to operate in the 11-meter band. In order to use the radio on the high end of 10 meters it will have to be retuned. Therefore I will only accept bids from a licensed amateur radio operator.

2) On transmit, the built-in meter indicates a higher-than-normal plate current.

3) The microphone provided is not a standard Kenwood mic, but is wired to work with the TS-520SE and works fine.

Pictures will be provided upon request. (My digital camera -- freebie from Earthlink, you get what you pay for ;-) -- doesn't take very clear pictures, so I will have to take a Polaroid and scan it at work to provide pictures.)

Buyer to pay ACTUAL shipping costs.

Again, if you intend to bid on this radio, you MUST be a licensed amateur radio operator. Proof of license may be required in order to complete the purchase of this equipment.

I accept cash, personal check, money order or PayPal. If paying by personal check, allow time for the check to clear.

626. FREE--ALPHA 78 FACE & COVER--FREE !!!

Newsgroup: rec.radio.amateur.equipment
Date: 2003-01-18 18:58:54 UTC
From: rong@computer.net
Message-ID: <3e29a417.7941542@news.optonline.net>
Source record: 34357
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

Hi all,

I just put on a new face & top cover on my old Alpha 78. I thought I was going to have problems but everything went very smooth. I was advised by Glen at Crosslink that I might have to loosen the 2 meters to align them with the new face, but the face went right on like it was made for my unit. The new face & cover are high quality units with very nice paint & lettering just as you would expect from Crosslink (ALPHA).

Now I have a sticky face & cover to get rid of. I really do not want to throw them away, as I'm sure that SOMEONE out there can make use of them. There is a rumor that if you soak them in water overnight, the stickiness goes away, but I cannot confirm that.

Except for the stickiness, the face is in great shape with the exception of the top left screw hole--somebody had bad aim with their screwdriver and put a few scratch marks there. The cover has numerous scrapes and smudges, but there are no dents or deep scratches.

Now the best part---THEY ARE YOURS FOR FREE---All you have to do is pay me for the shipping which should run under $20, saving yourself almost $200 compared to buying new ones. E-mail or call me at 914 769 3114 M-F 7AM-5PM EST, or all weekend at 845 526 3221 .

632. VX5R going deaf? HELP!

Newsgroup: rec.radio.amateur.equipment
Date: 2003-01-18 22:49:58 UTC
From: Toscano <toscano2@ix.netcom.com>
Message-ID: <b0cbh9$rh8$1@slb9.atl.mindspring.net>
Source record: 34359

I've had this radio for about two months, purchased it used in excellent condition from someone I know who bought it new. I know this radio has been trouble-free in the past, but now it seems to have a slowly growing RX problem.
Last Saturday...RX was perfect on 70cm ham band. Using it as a scanner on 800MHz public safety I noticed it did not seem to pick anything up. But I did not worry...
A few days later, it was not receiving on 70cm anymore. I could transmit fine, but when it comes to receiving I can not hear a thing, not even with squelch wide open with a transmitter just inches away.
Now (about three days after radio stopped receiving on 70cm) it seems "deaf" all the way down to the 160MHz range. I can not even receive weather on the local high-powered NWS transmitter on 162.55.
I still get 2 meters and 6 meters, but I am worried that 2 meters will be the next thing to go.
Any ideas on what may cause this, or a remedy, are appreciated.

Thanks and 73s de KB1ILS

Forget about soldering a ground for lightning protection, it'll blow apart
when you need it. If you can't weld, then clamp securely. Have had
good results tinning the Copper surfaces to be clamped to Galvanized.

If you can, try a different antenna which covers that band first. Part
of yours might be damaged.

Access to an antenna analyzer would help, to see what is leaving the
finals of your rig.

Two months, it should still be in the warranty period, although the
ownership change could complicate. Check with a Yaesu dealer

I would suggest not trying to xmit on that band until this problem is
resolved

Happy trails,

I am looking for any parts that you might have or a whole unit working or not, blown finals
or no tubes. Or just parts. Switches, chokes, tube sockets, input network and etc.

I am also looking for any of the aluminum sheetmetal for the Heathkit SB-220 amplifier. I need the the left, right, center divider and top perforated cover for
it. Tell me what you have, let's deal

Please state price and condition on reply.

Message-ID: <pan.2003.01.19.02.27.26.145103@njmc.com>
Source record: 34369

Are there any mobile rigs - or is there any reason for mobile rigs - that offer multi-mode (cw, ssb, am) on 2M or above? I've seen mention of some SSB capable 6M rigs, but not many. Is VHF/UHF really FM only? Never really looked at rigs that closely before to notice, but that's what it seems to be. Note I'm not referring to rigs that are actually designed as a base station that can also run off 12VDC - I mean real mobile rigs - or even ht's for that matter. Although I really couldn't imagine trying to work a ssb capable ht.

Kind of, but all of these are HF/VHF/UHF rigs. One can pretty much assume
that the SSB (et al) capabilities are really designed for HF work on these rigs.
Not that they aren't capable of other modes above HF, but I was really
looking for VHF/UHF only rigs. I'm hunting for my first (well, second
actually) rig now that I'm a ham in waiting (passed the test, just waiting
for my license to be processed). I stumbled onto the last HTX-200 in my
local RS last week and grabbed it just because it was only $50. Now I'm
looking for a couple of VHF/UHF rigs for my car and truck. I'm thinking of
a simple 2M/70cm setup initially.

Yes! These are the perfect rigs for VHF/UHF SSB + CW. Not only are they powerful and versatile, but they are also SMALL. I am planning on buying an IC-706 MKIIG soon for myself. I mainly need it for the HF capabilities, but it surely won't hurt to have a backup for my VHF/UHF rig (an FT-90R, which does not have SSB and CW capabilities).

I've never used these before, but this *may* be just what you are looking
for... and the prices are certainly right.

http://www.mfjenterprises.com/products.php?prodid=MFJ-9402X
http://www.mfjenterprises.com/products.php?prodid=MFJ-9406X

As far as a dedicated SSB/CW UHF rig goes, I don't know of one. But then I
think you'll find more action on 2 m and 6 m for your purposes anyway.

Good luck! 73 always,

Jackie KC0ODY

I have the optional card for the AOR scanners for auction which allows you to decode CTCSS tones (also known as Private Line or PL). This is very useful if you are in an area where there are many co-channel users and you want to block out all the other agencies using the frequency except the one you want to hear. It allows you to monitor without losing your sanity.

Excellent (and I mean excellent) condition PC-9000. Covers 160 thru 6 meters with selectable 5 or 45 watts output. See Patcomms link http://www.patcommradio.com/webdoc3.htm

Will also include LDG Z-11 QRP autotuner. http://www.ldgelectronics.com/z-11.html

Comes with mic, power cord, and manual. Both units are in next to new condition. Looking for DX70, IC706, FT100, or TS50, Going back to HF mobile. Both units in excellent shape (pics available to interested parties.) The Patcomm just isn't my cup of tea.

Thanks for reading.

If a person wanted to generate a completely unmodulated carrier with an fm transmitter, how could it be done? Could it be done by removing the microphone and keying the radio? It seems that without audio, there could not be deviation and the resulting modulation. Is this right? Would a makeshift continuous wave such as this be a completely clean carrier, as unmodulated as a transmission from a radio that features a cw mode before it is morse keyed, or would there be resulting by-products in the wave that would cause at least a little corrupted modulation? Thanks

VHF/UHF (even mobile) *is not* FM only. In fact before FM there was
AM mobile, but I'm dating myself. (A friend ran a 4CX250 modulated
with push-pull 6146s mobile).

Any kind of serious DX type operation (rovers, etc) will be on CW or
SSB. There are a number of older multimode rigs that are by today's
standards quite large but were nevertheless designed for mobile
operation. Each of the big three made one. For 2 meters, there was
the Yaesu FT221 (the best one), the Kenwood TS-700 (so-so), and the
Icom IC-211 (a piece of crap).

There were follow ons to all of these and some UHF (432) versions as
well.

What a deal, I wasnt even aware RS had a 25 amp switching power supply. I picked one up and very surprised with its performance. Well built, I cannot detect any RF Hash, quiet cooling fan - small in size. Works well on my TS-850 which pulls 23 amps at 125 watts output. At $59.00 Ive never seen a power supply that can handle 25 amps continous for that low of a price! Special price ends Monday 1/20 from Radio Shack.

If you can turn down the microphone audio to nothing,
you don't even have to remove the mike.

Probably clean enough.
At least as good as many of the home brewed CW transmitters I've worked.

Thanks

Hi,

Hitachi Scope, dual channel 20 MHz, model V209. This is a compact portable scope and works great. AC or batt powered, but needs new batts.

I also have a RCA (Viz) WR-50C RF gen. 200 KHz to 45 MHz. Works great and is small in size.

And a B&K audio gen. Needs knob. I will have to go to the storage room and look at its model number if you are interested.

Willling to deal, trying to raise money for a used IC-746.

Regards,.

Bob

John, you're not going to find a VHF/UHF all mode radio. If you did,
it would be more expensive than an HF/VHF/UHF radio. I'm a tech and I
bought the FT-100D because of the SSB capabilities for 6m, 2m and 70cm
and because it was priced right. There is activity on these modes and
it's a great way to really take advantage of your limited frequency
allocations. 6m SSB can act like HF at times. I've contacted several
European countries on 6m SSB from NJ.

Good luck!

There used to be more multi-mode vhf/uhf rigs designed for fixed-station use, but the popularity of the Icom 706 and Yaesu FT-100 pretty much killed off that type of rig. Only current one I can think of is the Icom 910H, and it is a little big for mobile operation.

Most mobile vhf/uhf operation nowadays is FM-repeater oriented, and worked on vertically polarized antennas.

SSB and CW on the vhf/uhf bands is typically worked from home stations, on horizontally polarized beams.

It sounds like you're trying to mix and match to very different kinds of activity, and I don't know that you will find a small mobile rig that will cover both, unless you go for the 706 or ft-100, and then you're going to get the HF bands, too.

Your best, and cheapest, multi-mode mobile bet right now is probably a 706 or ft-100, and you can enjoy a lot of swl-ing with the expanded coverage of those rigs, to boot. If you have about twice the money, the black-box version of the Kenwood 2000 with the mobile control head would be the cat's meow.

Unplugging a mic is easier on a FM radio than turning down the audio..

HIGHLY doubtful...it would have some chirp in it, more than likely....
BEST way to make it a clean CW xmtr is run the xtal osc and buffer stage
after that all the time...and key the mutliplier stages...if this also
results in chirp then keying the first driver stage in the PA will fix
this....but merely keying the mic will NOT produce a clean CW signal
in most cases..

(snip)

As others have pointed out, these days (ie. new rigs) pickings are rather slim. About the closest thing that comes to mind are the Yaesu rigs, but these are single band only multi-mode rigs. They were available in 6 meter, 2 meter and 70 centimeter versions. FM, SSB & CW. Despite having the words "ALL MODE TRANSCEIVER" printed on the front these rigs did *not* do AM.

The two meter version was the FT-290R Mark II. They are still available on the used market, but they are not cheap. For the price of two you might be able to get a rig that does HF and VHF/UHF for the same money!

Also, while there *is* activity on SSB, and CW on these freqs. it is mostly around VHF/UHF contests. Unless there is a bunch of locals in your area who are on regularly I suspect you'll find few folks to talk to most times.

Oh, yes, I forgot .. check out the Yaesu FT-817 (current model) ... it's only 5 watts but might fit your bill.

Another problem, is FM is vertically polarized while SSB is horizontal. You'll either loose signal strength (via cross-polarization) using FM antennas on SSB, or you'll have to set up seperate antennas on your vehicle for SSB work.

Oh you might find some VHF/UHF all mode radios used. They used to make
quite a few of these. However, the trend to combine the HF/VHF/UHF has
pretty much killed the market for any new VHF/UHF all modes.

Source record: 34302

Last night while doing some SWLing, the tuning on my FT-1000MP became more and more stiff. Thinking that the tuning knob torque adjustment had just somehow become out of position, I removed the main tuning knob and readjusted to make for less drag. It didn't help. While I was test spinning the shaft the thing froze completely. There doesn't appear to be anything there but a shaft thru a brass bearing, into the encoder. But its jammed tight.

Anyone else encountered this? Have a handle on the cost of a new encoder?

Hi

I'm looking for advice on buying my first transceiver.

I'm looking for a budget (<i¿½150) secondhand transceiver for use in the UK. I would like to be able to use it mobile, with a random wire antenna (Any suggestions on additional kit this requires would be welcome), Phone a must, CW a bonus would like HF if posible. Any suggestions on good bands for newbies, etc. welcome.

Please help me out of my predicament.

HI,

I`m looking for information and tips about splitting and combining few power amplifiers in range from 80-120 Mhz. Power is about 300-500W for amplifier.

Input signal from driver stage must be divided to 2, 3 or 5 power amps and than combined again for output to antenna system.

Any information about software, strip-line design or any alternative is welcome.

Thanks in advance..

I have the Icom AG-25 VHF 2 Meter preamp for auction. This unit has never
been mounted outdoors. It works with the IC-271 275 970 and other radios.
Please take a look!

So? first some of you bitched about the FA / FS issue.
Now you make a stink about FA.
Bet he could find more things to list FA.
Rich, LIST MORE FA !!!
If some folks don't like it, DON'T read it or use a filter so it's not seen!!!
And lastly, this group is called "rec.radio.amateur.equipment"
NOT "rec.radio.amateur.equipment-FS.only"

Terry
The Yaesu charger number NC-72B is rated at
Input = 120V 60Hz 12W
Output = 12V DC 500mA

The tip of the radio power plug is positive
and the barrel is negative.

I hope this helps.

Message-ID: <3E2BB20D.BA34B9D@ctv.es>
Source record: 34322

Hello!

I am trying to repair a nice Yaesu FT-101ZD. So far, all is going fine
but
I want to get out 27MHz band and restore 10A and 10B to 28.0 and
28.5MHz. I
have located two quartz crystals changed in the oscillator module. They
should be 10A and 10B marked and frequency should be 42.9875 and 42.4875
MHz. I wonder if somebody has them available.

I could also use the full oscillator module.

Best regards,

JOSE

693. Re: How to design Wilkinson divider-combiner

Newsgroup: rec.radio.amateur.equipment
Date: 2003-01-20 12:43:39 UTC
From: Monty P <flying.email@my.mail.org>
Message-ID: <b0gqtq$cq6$1@news.chatlink.com>
Source record: 34323

First design consideration, a 300 to 500 watt Wilkinson needs to be done with transmission line that can handle the power levels, which precludes the use of stripline.

Dave Pozar's book Microwave Circuit Design (or something along that line, mine is at work at the moment) gives the design equations for the general case. Check the Agilient web site and find their freeware program APPCAD, which allows the calculation of lengths for various transmission line types.

This is a couple suggestions I can think.

My fellow radio amateurs...

I'm looking for manual and schematic for Lafayette HA-410
10m AM xcvr. The BAMA doesn't have it. Yes, I am aware
of the many commercial vendors who sell radio manuals. I
am hoping to find a fellow ham who has the information and
is willing to make me a copy "on the cheap", or loan it to
me so that I can make a copy myself. If someone has an
original HA-410 manual, I will volunteer to scan it and
upload it to the BAMA so that more hams can benefit!

Please help me restore this nifty li'l 10m rig...

73,
Dean K5DH

697. Katsumi EK-155 Keyer

Newsgroup: rec.radio.amateur.equipment
Date: 2003-01-20 16:22:20 UTC
From: caljsi@aol.com
Message-ID: <20030120112220.20373.00000188@mb-fo.aol.com>
Source record: 34328

Does anyone have a schematic, or instructions in English, for the Katsumi EK-155 keyer? I bought it in Japan and the accompanying instruction sheet is in Kanji, which I can't read.
The problem is that the keyer will not properly key any radio I've tried it on. Key line reads 1500 Ohms across the terminals, key up. It goes to an apparent short circuit, key down. Apparently the circuit is something other than an open collector.
73,
Cal K4JSI

698. Re: FT-1000MP Tuning Mech. Jammed?

Message-ID: <TKecncMq3ux5srGjXTWc2Q@comcast.com>
Source record: 34329

You need to take the encoder apart. I'll be a real
PITA depending on how stuck it is, but you CAN
get them apart. Sometimes there's a C-clip you
need to undo to get the shaft out. Once you DO
get the shaft out, de-grease it and the bushing with
cleaner. Then shine it up with some fine emery paper.
Re-assemble using a fine coat of WD-40 as lube and
you'll be all set.

I believe that the special deal from Yaesu ended when 2002 did.

They do have similar ones from time to time, and the big retailers
usually list these on their Websites.

>Don't laugh, a UK Foundation Licence, limited to 10W.

Well, lots of folks have done well on QRP CW and SSB....gives the impetus to get the CW skills up to par! 10W on the right band and right antenna should do well. Look for the Yaesu FT301, it was a 10W HF rig....there are the Elecraft kits (tho outside your pricerange) and several other QRP oriented rigs. If you can come up with a bit more scratch, look at the FT817 from Yaesu. Do a search on eham.net, esp. on the reviews, to get an idea about the rigs.

Andrew

>Re-assemble using a fine coat of WD-40 as lube and
>you'll be all set.

Umm....there may be a specific reason that you mention WD40 here, and a very valid one....but I would not use such a "cleaner/lube" in that application. There are several silicone based lubes which don't dry out and should accumulate less dirt. Petroleum based light lubes would seem out of place. Maybe a good lithium grease instead??

Andrew

709. Question about HT "docking" units

Newsgroup: rec.radio.amateur.equipment
Date: 2003-01-20 21:52:39 UTC
From: jlemay <jlemay@njmc.com>
Message-ID: <pan.2003.01.20.21.52.38.407000@njmc.com>
Source record: 34340

Has anyone used one of the docking units available for HT's? These are designed to mount in your car. The HT snaps into the dock and the dock is connected to 12VDC and an external antenna. The docks I saw also include an amp to boost a 5W HT signal to 35W-45W.

Great concept, I'm just wondering if it is implemented decently. This would be a much cheaper solution for me since I'm looking at buying a pair of dual band rigs - one for my car and one for my truck. Two of these and a nice HT would save quite a few bucks.

thanks!

> corrupted modulation? Thanks

Unplugging the mic and keying the FM transmitter will produce CW.
Your analysis is correct. How clean it will be depends on the radio.
Some are "chirpy" but others are quite clean.

New satellite operators used to do this on the mode A sats (2m tx, 10m
rx). I even did it once on AO-10 because I had a 70cm amp but no tx
except an HT.

If you plan on doing this on 2 mtrs, I would say its not a big deal.
It is unlikely that anyone will be bothered by a chirpy CW signal as
long as you choose a freq below 144.3 MHz. (I wouldn't do it on HF
though).

For the true RTTY enthusiast who uses noisy iron, I have the following technical data for sale. Some original, some copies as noted. Basically everything you need to know about the 28 typing reperf, 28 TD and LRXB tape handling stand.

1. Printer stunt box description and operation brochure copy
2. Bell Practices 573-127-700 Model 28B and 28C TD adjustments original
3. Bell Practices 573-127-701 Model 28 TD Lubrication copy
4. Reprint of Irv Hoff's 28 stunt box programming information
5. 573-104-400 28D & E Reperf-TD wiring diagram copy
6. Specification 5878S Adding signal bell original
7. Specification 5889S Adding letters feed out original
8. Specification 5955S Instruction for coding a 28 reperf "U" bar original
9. Specification 50034S Print suppression kit installation original
10. Bell Practices 573-118-100 28 reperf description & principles of operation copy
11. Bell Practices 573-118-700 28 typing reperf adjustments original
12. Bell Practices 573-118-701 28 reperf lubrication original
13. Bell Practices 573-118-800 28 typing reperf parts copy
14. Bell Practices 573-125-801 Tape handling stand parts copy
15. Some other wiring diagrams

All in one binder. $30 plus shipping from 93010

713. MFJ-202B Noise Bridge; need manual

Newsgroup: rec.radio.amateur.equipment
Date: 2003-01-20 22:26:21 UTC
From: Richard Wilder <wilder@u1.abs.net>
Message-ID: <hl_W9.61$cs1.20037@news.abs.net>
Source record: 34344

I need a copy of the MFJ-202B RX NOISE BRIDGE manual.
MFJ posts their manuals as PDF files but they don't have this one.

Please Email directly and we can figure out the communications.
Ideal would be to scan it and send it as an Email attachment.
Whatever works. (Of course I'll spring for copying and postage.)

$ 395.00 plus shipping or BEST OFFER. No trades at this time

I have 2 (two) Yaesu FT-530's VHF/UHF. One has been mars/cap moded and has 800-950 receive added. The other one still needs the mod done. Early serial #'s Tuning knob missing on both radio's but radio's work great.

Included in the package is the:
Yaesu MH-29 Display speaker/mic (1) (works and looks good)

Yaesu NC-50 Dual Slot charger with FNB-25,26,27 cups (unit works great)
Yaesu NC-42 Desk Charger (Not working)
2 - (two) Master Charger Units (Not working)
12 volt DC cord for FT-530 (1)
2 Manuals
2 HT antennas

Photo's can be sent if requested. Paypal or USPO Moner Orders accepted as payment.

I had looked at them, but ended up getting a mobile as well as an HT.

Picture using the controls while you are driving, or even reading the
display, add in that the signal quality will not be as good as an
integrated mobile rig, and a few nifty extra features you get with a
mobile, and you may decide the same.

Happy trails,

I ended up using Outers Penetrating gun oil, applied with a needle point oiler. After about 24 hrs I could budge the knob, and then I just kept turning it until it broke free.

I am puzzled as to why a chrome shaft in a brass bushing would have siezed up. I bought the rig in '99, but haven't been on so much since the latest licensing changes. So it has ha very little use.

Thanks for everyone's good advice. I haven't heard from Vertex yet.

Just to let everyone know, that I did disassemble the whole
thing and cleaned it before I lubed it with the WD-40. The
encoder in the rig I fixed had several small screws holding
the circuit board w/ the electronics onto the back of the
housing. This had to be removed, and then there was a fine
C-clip holding the shaft into the bushing. Once the shaft was
removed, I cleaned the crud off the inside of the bushing which
resembled some type of black grease. Once it was re-assembled
I found that it still did not move freely enough for my liking, so
I polished it with some fine emery cloth. That did the trick.

>
>thanks!

The main question is how easily you will be able to manipulate the small buttons on your ht when it is nestled in a docking unit -- it's not exactly the ideal setup for mobile operation. You'll also need a speaker mike unless you want to hold the docking unit next to your face.

Mobile transceivers, on the other hand, have bigger knobs and buttons, as well as microphones with the major operational buttons on them, and are just much easier to deal with while driving.

An alternative would be to buy a single rig, one designed for mobile operation, but put it in a bracket that lets you easily remove it to take in the house.

Have fun...

Bob

Actually, it really 'For Auction', and it would have been polite (and
not misleading) to put FA: in the Subject line.

Well depends if you are going mobile or base with it (maybe both). Base --
need power supply 13.8 V @ 25 amps. It draws 20 amps max.

See mfg accessories for antenna and power supply or at url:
http://www.alfenterprises.com/amateur_radio/icom_706mkiig.htm

Astron power supplies at URL:
http://www.astroncorp.com/main.shtml

All band antenna -- see antenna mfg's at URL: http://ac6v.com/antdealer.htm

Also nice to have a watt/vswr meter

Coax

Ground system for base use.

International Crystal in Oklahoma City, OK. Don't screw around, send
them the channel elements for recrystaling, calibration, and aging.
You get exactly what you pay for, and ICM is first rate.

Those are the same elements as used in Mitrek radios. You should
have little trouble finding them from ham swaps, or from International
Crystal.

If all else fails, contact me via E-mail. I may have some extras
that you could send to ICM for recrystaling.

FWIW: The MSR2000's a nice box. It should make you a fine repeater.

FOR SALE:
Triplett Model 3256 Frequency Meter.
This appears to be an absorption wave meter.
Shaped very much like a grid dip meter.
Has two ranges. One band covers 80 and 40m and has
the calibration markings for these two bands.
Other band covers 14 through 30 Mc with markings for
20m, 15m and 10m bands.
Has a switch to select between the two ranges.
Neat little gadget measures 5-1/4" long X 2-1/4" X 2-1/4"
plus a coil extends 2-1/2" out the top.

Has a very nice Triplett 0-1 mA meter built in.
There is a headphone jack on the front for monitoring detected
signals. Signals are coupled into the unit by inductive coupling to
the coil. Can be used for identifying, monitoring and tracing RF
signals along transmission lines, in tank circuits etc.

Condition of the unit is very good. Gray hammertone finish over copper
plated steel chassis-cabinet.

Will sell for $18.00 plus shipping

Hi:

I would not recomend this but a crystals persent value is
measured in parts per million, if you get the largest value and
muliply by 10: the percent is now measured in parts per 10,000! I
order from supliers who advertise in popular electronics magazines,
are there any supliers who custom fit to the needs of the consumer?

I won't laugh Simon, we all started somewhere.

You have very limited choice for the amount of money you have to spend.

You could try joining a radio club in your area and see what the members
have for sale.

Most of the suppliers of amateur Radio equipment want a lot more for even
very old equipment
than what you have to spend.

You must look at the condition of the equipment and have it checked out by a
friend who has been around for some time and knows what he's looking for.

Some old valve transceivers are very difficult to operate at the ten watt
level by just using the mic
gain control, but these can be found for around the, £150.00 to £250.00
mark.

You could have problems also if you really are requiring mobile operation.
The only two radio's that come to mind in your price range (suitable for
mobile) are the, 'Yaesu-FT7'
and the, 'Yaesu Ft707' Simon.

If I come across any equipment in your price range I will let you know.

Cheers and good luck, Ken, G4KIR.

762. Re: Replace varicap in MFJ-9420?

Newsgroup: rec.radio.amateur.equipment
Date: 2003-01-22 06:58:49 UTC
From: Pete KE9OA <n.gianakopoulos@worldnet.att.net>
Message-ID: <JirX9.124119$hK4.9997090@bgtnsc05-news.ops.worldnet.att.net>
Source record: 34293

The problem with varactors is that they don't generally have the Q that you would get with a good variable cap. Typical Qs range from 270 at the low voltage end of the range, up to around 400. Also, stability is going to be limited by your tuning pot. Make sure that you get a good Allen Bradley, Bourns, or Spectrol pot. These will run around 10 dollars each. Before I knew how to build synthesizers, I used to tune the VCO with a pot; I used a precision metal film ladder network to establish the tuning bands, using a couple of op-amps as precision voltage sources. It was fine for tuning AM signals, but with SSB, I experienced about a 2kHz/hour drift downward in frequency, and the oscillator never stopped drifting. Now, if you used some sort of bandgap voltage reference, that could stabilize things a bit. One of the FM tuner manufacturers does just this, using an Analog Devices REFxx chip.

My Icom IC-229H suddenly stopped transmitting. It looks like it is still transmitting, it keys up and it is still pulling in 10 amps from the power supply so where is all that power going? RF output is nothing. Any ideas?

Thanks,
John N7MTB

766. Power supply & battery combo?

Newsgroup: rec.radio.amateur.equipment
Date: 2003-01-22 12:08:09 UTC
From: cprstn54zz@att.net
Message-ID: <3e2e863d.16207390@news-server.optonline.net>
Source record: 34297

I am trying to come up with a light power supply for 40 watt TX while travelling. My rig draws 10 amps on TX, under 1 amp on RX.

I would like to use a Samlex SPS-1206 (5.5 amps/13.2 volt) switching supply, which is physically very small.
http://www.samlexamerica.com/SPS-1206.htm

I will have a NiCd battery pack along and would like to use that to provide the extra current on TX.

How do I hook the two components together so that they will work the way I want?

Would a small lead-acid battery be a better choice? At full charge, no current will flow to it from the 13.2 volt Samlex. Lead-acid is better for momentary high current than NiCd. However, its capacity per pound is much lower.

If there is no problem importing American gear into the UK, you might look at the Patcomm web site, http://www.patcommradio.com/ and check the PC-500. It's pretty close to your price range, and has about 15 watts cw and ssb output on any two hf bands of your choice.

Looks small enough for mobile, or to run off a battery in your house.

Source record: 34151

I have a very nice Icom IC-740 with Internal Icom120 Volt AC Power Supply that I
am selling for a friend. The transceiver works well. It has full output on all bands and receives very well. The only problem that I have noticed is the Preamp switch is dirty so the Preamp works sometimes and not others. It covers all HF
bands including the WARC bands. There appears to be a CW Filter installed in the radio. At least when I switch it into CW, it sounds like a narrow filter is in line.We could not find the manual. The standard Icom hand mic is included.Price is $400 plus shipping from 79602.
Thanks, Charlie Hugg, K5MBX

No, your reading comprehension is just fine. That thread went off on a tangent and I like most, added to it. As to policy, most people protested the policy of asking one's life history to make a purchase at RS. When this "Power Supply" subject came up, someone had spoke of buying one at a good price and were asking an opinion - if memory serves me correct. Then someone replied that they didn't know the power supply spoken of, was on sale.. And so it went from there. Talking about going to RS to buy one - I guess - got into the policy being stopped.. You'll find that MANY threads change from the original if you hang around long enough.... Lou/Tech@DP.NET

You can probably get away with it on some elements, but for some of the more elaborate elements (KXN1019B) it's best to let ICM rechannel the device. There are internal series inductors and misc. fixed value ceramic caps. that vary across the operating frequency range of the set.

I was going to ask about importing from the USA.

I emailed Patcomm and their reply included

"Europe needs, because of RTT+E and CE different versions than the
American market."

bit wierd I though, especially as they quoted 499 euros for the 500
series (about ï¿½375)

Did you get it? I'm a little confused by Motorola, as I had bought some assets from a radio/paging company that went out of business in Georgia that included programming software for about 60 Motorola Models (including the model you're looking for). I offered the CD I made of it all for $53.85 by Paypal, but Motorola made me take the offer down. Yet I see requests for this software all over the place, and if you do a hotbot search for "motorola programming software" you'll see at least a couple of overseas outfits openly distributing it over the internet! Anyway, I was just wondering if you got it, or got a threatening note from Motorola about it? I know I'm kinda peeved at sitting here with this stuff on this disk that's useless to me, that I paid money for, and I'm told I can't get my money back.

Ah! Well, I should have kept reading.. that answers my question. I was a
little perturbed that Motorola would let everyone and their uncle freely
trade the stuff, but not me. Thanks for clearing that up! Now, for this
CD chock full of RSS.. anybody wanna buy a frisbee?

798. Re: FM Transmitter To CW

Newsgroup: rec.radio.amateur.equipment
Date: 2003-01-23 04:35:36 UTC
From: JB <ac6tk@nospamcybertime.net>
Message-ID: <b0qke3$2eim$1@madmax.keyway.net>
Source record: 34104

One thing to be considered is the time required for the PLL to lock
on the TX frequency before the logic will enable TX. This has to
either add a delay to the signal or mess up the CW envelope.
Much better to key something else to cut off the exciter chain in
a clean manner. I haven't given it much thought though, since an
FM rig doesn't demodulate CW well.

: > corrupted modulation? Thanks
:
: Unplugging the mic and keying the FM transmitter will produce CW.
: Your analysis is correct. How clean it will be depends on the radio.
: Some are "chirpy" but others are quite clean.
:
: New satellite operators used to do this on the mode A sats (2m tx, 10m
: rx). I even did it once on AO-10 because I had a 70cm amp but no tx
: except an HT.
:
: If you plan on doing this on 2 mtrs, I would say its not a big deal.
: It is unlikely that anyone will be bothered by a chirpy CW signal as
: long as you choose a freq below 144.3 MHz. (I wouldn't do it on HF
: though).

FWIW: You're probably safe enough using it for your own personal
radio(s), but trying to sell it or move it can get you into big trouble.

That's one of the reasons I started offering my services. There's a
LOT of Moto-boxes in the ham world, and the commercial shops are, in my
experience, often uneasy about programming such for the ham bands, or are
priced out of the realm that most hams are willing (and, in some cases,
able) to pay.

There's another factor. Setting up some radios, such as the early
Syntor X's, for ham service is more involved than simply reprogramming
the memory module. You may also need to do some retuning of the
receiver's front end, using a high-end sweep generator and spectrum
analyzer/tracking generator combo, because of the lower-end limit in
the radio's design of 150.8 in VHF, and 450.0 in UHF.

Since doing said retuning could very well affect the radio's type
acceptance for commercial service, and because there's no way to
guarantee performance of the modified radio to Motorola specs, most of
the commercial shops won't touch any such conversion jobs. Again, that's
why I started making it known that I would at least try.

My offer still stands. If the person that wanted the GM300
programmed still wants it done, and wants to get it done legitimately, I
am available.

First, does the noise occur when the engine is not running?
If it occurs only when the enigine is running, disconnect the antenna and if the noise stops, it coming in on the ant, and if it doesn't it's coming in thru the power lead..
Once you isolatean area, it'll be easier to pinpoint..

Hi again Henry,
I did what you said, and here's the results...

There is no noise when the car is off. When the engine is running, I hear the popping noise in the speaker during a conversation (listening). When I disconnect the antenna, I dont hear the noise, but I also can't receive any signal.

So I'm asuming that its coming from the power lead. What do I do to fix this problem ??

Let me know, Thanks again for helping me..

Rickie

Two Eddystone Connectors (spring loaded) . These are very, very rare and are in unused condition. They fit a variety of Eddystone Receivers used as aerial or earth connections etc. Because of the weight and build of Eddystone Receievers, people usually pick them up with the handles and lean them back breaking these connectors on the rear. If you are an Eddystone collector and or restorer you'll know how very rare you see these and how difficult they are to obtain

From: "Daniel C. Mckenzie" <no.mckenzie.crud@acegroup.cc>
Message-ID: <b0q3bg01aek@enews2.newsguy.com>
Source record: 34098

I have a TenTec 4229 tuner (similar to the 238B). To operate
on 160 meters I ned to attach a 2000-3000pf capacitor to the
terminal on the back. Does anyone know where I could get
the right capacitor? What have you used? I assume I would need
one with at least 1000V rating, probably more.

Also, does anyone have a schematic diagram of this tuner?

Thanks.

Dan, W9FCC

1Kv would work for 300 watts or less, I'd go to a 5Kv or more if your using
1Kw or more.
Try K8ERV, he has lots of parts like this.

Not too critical. RL Drake used about three different paints during the manufacturing run of the
rig. Any flat matte black finish will work nicely. It does not have to match any of the other
cabinet pieces which are all annodized aluminum heat sink rails. The bottom is unfinished sheet
metal.

827. Need service man. TS-430

Newsgroup: rec.radio.amateur.equipment
Date: 2003-01-24 12:12:24 UTC
From: JJ <ve1jot@hfx.eastlink.ca>
Message-ID: <3E312DA8.4AFB92B@hfx.eastlink.ca>
Source record: 34109

Hello all, I'm in dire need of a copy of service manual
for my TS-430, I had sent the rig to the local shop (R&S electronics)
here in Halifax, N.S., Canada, as I had the dreaded "via" cold
solder joint prob that occurs in many of these rigs, and I had
taken P.A. module apart and re-soldered the connections to the
final transistors, but when I had re-assembled the rig, I had
left out the mica insulator for Q7 (bias xsistor), and though
I had thot I had the rig on my current-limiting power supply, sadly
it wasn't, and when I powered it up, poof! I had taken it apart again,
put the mica insulator in the correct spot, but the rig seemed
stuck in TX mode partially...took it to the shop and they
replaced a chip "the one that sits between the microprocessor and the
rest of
the world" is how the tech explained it...this took a couple of
months, then he called me and told me that he couldn't get the
wiring harness hooked up, and had to fax kenwood...another long wait,
then
I find out the shop is folding, so after a few trips in person I finally
get my rig back..to be fair, he said he only charged me for parts
($67.00+tax CAN.) but when I got it home, the wiring harness was
all messed up on the IF board (no RX). After fidgiting with it I
got the unit to RX fine, and it now switches between RX-TX as it
should, on TX, output is only 1 watt or less, with meter in IC
position it shows 10A (but it's NOT drawing that) and with meter
in ALC it goes mid-point...finals show ok when checked also bias
and driver transistors show ok too..so I'm stumped! If someone
could maybe scan and e-mail the info for just the P.A. part
it would help, or e-mail me any ideas?
Regards,
John

From: Vito Liberatore <vliberatore@denardis.com>
Message-ID: <BA56D094.784%vliberatore@denardis.com>
Source record: 34111

I'm interested in purchasing this radio and had some questions about some of the accessories...

My use for this radio in the near future will be voice and digital mode operation from 6m and above and just receive below 6m. The radio will be used mostly in mobile operation in the northeast US, in remote areas as well as NYC and other Urban areas.

How would installation of the CR-282 and/or the SSB filters noticeably affect my receive quality and the quality of my transmit signal?

Unless Icom changed something during the production of the 760MKIIG
any front panel from a 706MKIIG will work. They were not specific to
the serial number

The front panels from the original 706 and 706MKII will not work
properly however.

Source record: 34114

You might an FT-920 used, but even if you buy it new, it will be a great radio to have at about $1000. Read the eHam reviews of the radio's you are thinking about. They are brutal when the radio is trash, and very forcoming with useful inforatiom that means something. So you won't see comments like this: "This radio is really, really good.'" , instead you will see real world comparisons and educated comments.

Be extra careful if you buy a used rig, you can get burned real easy. Go to your local Ham club and find someone who knows a lot about radios to take along with you when you shop. This is especially true about Hamfest's, Hamfest are full of sharks, shop with someone who is savy to Hamfest operations.

833. Re: Motorola Channel Elements Best place to buy??

Newsgroup: rec.radio.amateur.equipment
Date: 2003-01-24 20:06:59 UTC
From: Skipp can be found through sonic <notrealemail@yahoo.com>
Message-ID: <b0s6d3isj3@woodrow.ucdavis.edu>
Source record: 34115
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.swap

I too used International for many years, but they've become so expensive
that I sought out an alternative. I'm also a skeptic and had to verify
what I found would be a real fix.
A friend uses Bomar and gave me their number, I called and paid $10 per
crystal if I re-rocked the element myself. So I've done just that since
receiving my first order in.

I've now re-crystaled over 30 pairs of MSR channel elements on both UHF
and VHF using the Bomar units... very cost effective and so far, not one
bad rock. I use the recrystaled elements in my commercial (trunking and
conventional) dual mode and amateur repeaters.

I've had great service with International and only one receive element
(which they did) go just out of spec. But their prices have gotten way out
of line.

So consider Bomar as a real option, I've placed very large orders with
them in the last two years and everything received has been spec, on
time and cost effective.

I can also field MSR-2000 questions if you have any... I have over 50 in
service in many modes (including trunking) and have about worked out every
issue you could think up.

I have a conversion to an external controller (ham) work up on the
http://sonic.ucdavis.edu Amateur Radio page. You can Email me from any
of the web pages if you have questions. I've also done tone panel
connections and repairs of which I'll provide help as practical.

cheers
skipp

This past weekend (Jan 18 & 19) was the ARRL VHF contest. Some contestants racked up hundreds of contacts. These were done in single sideband and CW modes.

845. Need crystal xtal formula for ht90 ht440

Newsgroup: rec.radio.amateur.equipment
Date: 2003-01-25 04:05:55 UTC
From: John Smith <john@somewhere.com>
Message-ID: <b0t2pe$9gs$1@news1.usf.edu>
Source record: 34127
Cross-posted to: rec.radio.amateur,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc

Anyone out there with the correct formula for the crystals on a Motorola
ht90 (ht440)?

I just picked one up and inside it has 4 crystals reading:
55387.50
55395.31
17206.01
17203.7

It transmists on 464.5000 ch 1 and 464.5625 on ch 2
Both simplex

Thanks for any help!

Chris

Hi i have a nice looking and working president hr 2600 forsale.
this a 10 meter radio looks like the 2510
I have tested it in all modes and it works great.
Comes with the original stock mic with up and down buttons and the power
cord and mounting knobs.
$160 shipped lower 48 states.
E-mail for picture.

847. HTX 212 diagram anyone??

Newsgroup: rec.radio.amateur.equipment
Date: 2003-01-25 04:51:24 UTC
From: Tom <trg46@charter.net>
Message-ID: <v345u7862kje69@corp.supernews.com>
Source record: 34129

I am looking for anyone that might have a repair diagram for the Radio shack htx-212. I need to know the value of a surface mount what I believe to be a capacitor coming off coil L19/L20, The coils are on the TOP board and the surface mount (I believe a capacitor) is on the bottom of the board. I have a xcvr that burned up one of those surface mount (possible capacitor) and now I have no output.

Thanks

Thanks to all for the information provided. The question regarding
whether it was possible to send continous wave with an FM transmitter
was posed only to settle a bet, and does not reflect any intention to
try and acheive such a goal. Thanks again.

hey vito
the filter does nothing for transmit what it does it tightens the
receive signal so you dont hear the splatter of near by siganls that are
just a couple of hertz away
another option i would suggest is the voice synthsiser it would be a big
help in the car to press a button and have the radio tell you the freq
and mode your on that way you wouldnt have to take your eyes off the road
also get the seperator kit that way you can remote mount the radio and
have just the faceplate mounted on the dash so if your broken into they
would only get the faceplate
good luck

Best of both worlds: MSR2000 PA deck running on a Micor repeater
base.

I love the Micor RX and squelch system over the Mitrek. With a little
work the 110 watt PA and control system can be retrofitted to an
existing Micor base. Solves the obsolete PNP RF transistor replacement
problems as well.

Cheers

Pete

The CR-282, which is the high-stability crystal oscillator, will not effect the quality of either the transmit or receive signal. It's purpose is to reduce frequency drift. It will reduce the normal 5.0 ppm stability to 0.5 ppm if that is important to you. I have not installed it in my 706 MKIIg and have not seen a need for it. You would need to install it to be compliant for HF use on the Civil Air Patrol.

> Anyone out there with the correct formula for the crystals on a Motorola
> ht90 (ht440)?

Youbetcha.

TX = Crystal F times 27
RX = Crystal F times 8, plus the first IF (21.400MHz).

International Crystal can provide rocks for ham freqs if you want.
You should have the service manual and a service monitor handy to do the
alignment.

(SHAMELESS PLUG ALERT)

If you do not have access to either of the above, I have both, and
I can install the new rocks and tune the radio(s) up. See

JOE:
Are you too stupid to list FA instead of FS. DON'T WASTE PEOPLE'S TIME!! A lot of us would buy things direct and don't care to play the eBay game. I won't bother looking at FA headers and if I click on a FS header and see that it is really FA, I wouldn't go to the auction because you have already "pissed me off"

You guys need to try some decaf... you are way to tense. Doesn't your newsreader allow you to filter words in the BODY of the message? If it's an ebay auction, then the body has to have a link to ebay. Just set a filter for the body of the message and be done with it. You are never going to get everyone to post FA instead of FS. Do your part, and then you won't have to worry about it anymore.

876. How to compare older Kenwood HF transceivers?

Newsgroup: rec.radio.amateur.equipment
Date: 2003-01-25 21:22:36 UTC
From: fj40dana@hotmail.com
Message-ID: <9a118507.0301251322.4e8068b6@posting.google.com>
Source record: 34207

Hi all. I'm in the market for an HF transceiver, I like the Kenwood line. I've been looking at all the offerings on ebay, but I am totally unfamiliar with the various models that Kenwood has offered over the years, their strengths and weaknesses, and the various features that each radio does/doesn't have.

Is there some site that I could visit that would compare all these models?

Some of the radios I've seen on ebay are:

TS930S TS440S TS850S TS140S TS430S

These are only some of what I've seen, there have been others. I know there are probably some pretty major difference between some of the above models (as well as other models, too), but I am finding it difficult to collect all the "comparative" data on all the models I see for sale.

thanks

One might ask why you are partial to Kenwoods if you are unfamiliar
with them.

I can suggest two sites that might be of help:

1. http://www.eham.net/reviews/products/14

This site lists user/owner comments on tranceivers
they have owned, and all of the above listed models
should have comments.

2. http://www.arrl.org/htdig/?method=and&words=Kenwood+TS930S

Lists ARRL references on the TS930S (alter the last
part of the URL for references to the other rigs).
However, you must be an ARRL member to gain access
to much of the material.

Good luck!

Rob

880. Re: How to compare older Kenwood HF transceivers?

Best bet is arrl.org if you are a member. They review equipment in a lab envirorment with published results.Eham has reviews that are worth reading BUT many of them are very subjective - whatever someone currently owns is the usually the best rig ever made. From the list you have the Kenwood TS 850 is the hands down winner - the others are not even close. The TS 850 is STILL one of the best rigs ever made - receiver measurements by ARRL labs (not somone's ears) show it superior to the Icom 756ProII. --- Steve Kk9ZZ

Yes, go to http://www.arrl.org and subscribe to QST/join the ARRL. (When you join the ARRL, you get an automatic subscription to QST.) As an ARRL member, you will be allowed to access the online collection of monthly product reviews that QST has done, going back to the early 80s, covering every major rig -- Kenwoods, Icoms, Yeasus, etcetera. These are moderately scientific reviews, and give all the specs on each rig of interest.

You don't really need the SSB filter(s) since you're going to be on the higher bands where there are not that many signals, and QRM is not really a problem.

On the more crowded HF bands, the narrower SSB filters might be handy. I'd just buy the rig first, and if interfering signals are a problem, then spring for the narrow filter(s).

Message-ID: <20030125194525.03048.00000266@mb-cr.aol.com>
Source record: 34215

Lets see.
First of these was the TS-520- 80-10m, noWARC, tube finals
Grew up to be the TS-520s, and 520SE
Grew into the TS-530S which added 160m band
The TS-820S came slightly after the 520, same basis rig, more
expensive
Then came the TS-830S, which had digital display, still tube finals. Last
of Kenwood's hybrid rigs.
Then there was the TS-180S, first all solid state digital display rig. Had
rudimentary memory
Then the TS-430S, which grew up to be the TS-440
Then the TS-930S, which grew up to be the TS-940S. The 900's were
more expensive rigs than the 400 series.
The TS-140s was a "price" rig offered about the time the 440 replaced
the 430.
Then came the TS-950S, a damn nice rig. Very expensive and didn't sell too well because of it. The TS-850S came out as a more pleasantly priced alternative, near the end of the 950 period. The was also a TS-450, cheaper than the 850, and I think made to capitalize on the very popular TS-440.

Missing from this list of Kenwood HF equipment are the "Twins", the 599, 599A, and 599D. These predate the 520. Then, just after the 520, a pricey rig, the TS-900. The 900 had sweep tube finals for higher power (and sweeps were cheep back then), and tip out circuit boards for easier servicing.

That's at least the chronology. The features would be a large book! For example, the original TS-520 had a built in 12 and 120v power supply, which was dropped to keep pricing down on the 520SE (E=economy). I never did get an explanation of the adding of "S" to the model designation numbers.

Finally, Kenwood is Kenwood in the USA, but TRIO in the rest of the world. Drake's very populat TR-22 was in fact, a private label TRio 22! I own, or have owned, nearly all of these. I still kick myself for trading my TS-900 to get an all solid state Yaesu FT-7B for the mobile, but the '520 was taking up too much of the front seat.

From the group you mention, the 850 is by far the best rig.

The 930 is an excellent rig also, but they are old now,
and will tend to have more problems.

From: WZ1U <wz1u@attbi.com>
Message-ID: <cev73vcik7p08dv0mghgk1gh0l9h0j1dbl@4ax.com>
Source record: 34230

I have for sale a Kenwood TS-430s station that is in very good condition. Its an 8 out 10 from a non-smoker. The 430 comes with the original hand microphone and instruction manual. It also has the 1.8 ssb filter and the 500 Hz cw filter with a copy of the service manual. Also have the matching AT-250 automatic antenna tuner and the PS-430 external power supply with original manuals. The tuner comes with the remote cable and ac power cords. I do not have the original boxes for all 3 items. I will take $625 for the complete package plus shipping or will split it up, but the rig has to go first....If you have any questions email me for more info...WZ1U Steve / Lakeville, Ma.

899. WTB: Replacement Meter for Heath HM-102 Watt Meter

Newsgroup: rec.radio.amateur.equipment
Date: 2003-01-26 15:48:04 UTC

Gentlemen,
I am looking for a replacement meter for my HF-102 Watt meter. If you can help me out please email me. If you have one with a scratched up plastic face that's ok, I need a working movement with the scale.

73,
Frank K9IC

Wouldn't that depend on the asking price versus the features available? I just picked up a very nice TS-430S at a very low price at a local ham fest. It has all the basic features that a beginner could use and would be a nice first radio. I'm going to set this one up for my daughter down in Georgia to use this summer.

Hi,
I found a K70-Mosfet RMS Two way radio amp at a local junk shop. It's got an on/off switch on the front and an LED. On the back it's got two pl258 connectors for antenna and RTX. Anyone familiar with one of these? Are they any good for 2m use?

note:

:
: Dee Flint, N8UZE
:
I am running a TS130 in my van, and previously my off-road pick-up,
which I unfortunately wrecked (not a scratch on the radio) The 130
added WARC coverage, NB, a working processor and updates to the
PA for added protection from burnouts on the earlier 120 PA's. I'm
not sure if the 120 also had passband tuning and Narrow filter selection.

These radios have bandpass filters in the IF for each band and are
unable to do General Coverage. This is their only drawback as
far as I can tell, but it seems to outperform a lot of other rigs at
FD.

Despite my new TS2000, I still use my TS830s because I think
the 830 has the edge in performance to my ear, even though It
is outclassed by the extremely abundant features of the 2000.
I have both side by side and switchable into the HF antenna
selection and 30L-1.

One should be very careful when choosing older rigs though,
as even normal wear and tear for all these years can result in a
money pit restoration project. For example: It is most difficult
to resolve worn VFO problems and negates any cost savings.
Many Kenwood parts are still available though. While time
consuming and tedious, I recently replaced the 830's
Passband/Notch and Tone/Bandwidth controls with brand new
ones.

TS-830S is a hybrid radio -- three tubes -- 2 finals and a driver, all else solid state.

We have local radio repair guru here with $50,000 of test equipment and he flatly states that the TS-830S is the second best transceiver he has ever tested -- The Yaesu FT-1000D being the best ($5000 or so new)

A vacuum final radio can tolerate much higher VSWR than a solid state radio. The plate circuit acts as a matching network. I have operated with VSWR as high as 5:1 and operated that way for years and never changed the final tubes, Try that with your solid state rigs!

CW ops will tell you that the TS-830S with its Variable Bandpass Tuning (not slope tuning) and the superb Kenwood CW filters is one of the finest CW rigs ever made.

The TS-830S operates off 117V - so no DC power supply is needed.

Also the audio quality out of a TS -830S is hard to beat. The noise blanker is so so and you do have to dip and load but a power meter inline makes it duck soup.

It is a superb radio -- beginner or otherwise.

Some top DXers still use the TS-830S because of its fine performance.

I've seen a lot of posts about problems with the SM capacitiors in this unit. I'm having much the same problems (no reception, basically), but I also notice a yellow goo that has leaked out of two of the crystals on the main board. Since they're a lot easier to replace than all of the surface mounted components, I'm hoping that they are the only cause of my problems. Anyone have any thoughts?

Also, since it's such a common problem, could someone post a board layout with capacitor specs, for those of us who do need to replace them?

Thanks,

arik@finjan.com

For what it's worth, Win95 doesn't run DOS programs properly.
You probably want to locate a copy of MS-DOS 5.0
The most stable one in the bunch.

918. FS: MINT Yaesu FRG-9600 Receiver/ Scanner

Newsgroup: rec.radio.amateur.equipment
Date: 2003-01-27 01:04:09 UTC
From: klarrg@aol.com
Message-ID: <20030126200409.06598.00000261@mb-fh.aol.com>
Source record: 34048

I am selling my nearly-new, MINT condition Yaesu FRG-9600 communications receiver/scanner.It is absolutely flawless (not even any DUST on it!)and has all accessories as from the factory (except for wire tilt-up stand).This unit has probably been used for an hour AT MOST since was bought new a few years ago, and has been in storage since.
Radio covers 60-960 Mhz continuous (no cellular block)and has 100 memories in 10 groups of 10.The flourescent display is bright and the radio is in PERFECT working order.Purchase price includes the radio, power supply, antenna, box, packing, owner's manual, and OPTIONAL, INSTALLED TV ADAPTER ACCESSORY (allows radio to receive video signals thru a monitor (monitor and cabling not provided).Adapter was an additional $139 at time of purchase.
This is probably the cleanest, nicest FRG-9600 you'll ever find so, if you have been seeking one of these units for your collection or radio shack, this is THE one.This radio sold NEW for well over $700.00
You can own it for $400 plus $18 insured, double-boxed S/H fee.Payment by money order only, please, and radio ships to you SAME or VERY next day M.O. arrives here.Please Email any questions to me directly: ALL serious replies answered.Sorry, but NO trades or "offers". Can NOT accept PayPal, online credit, or personal checks.THANK YOU.

919. 746 pro noise on transmitt

Newsgroup: rec.radio.amateur.equipment
Date: 2003-01-27 01:27:20 UTC
From: Ralph Mowery <rmowery@ctc.net>
Message-ID: <D9KcnaW3It0IBKmjXTWcqA@ctc.net>
Source record: 34050

A fellow ham has just received a new Icom 756 Pro and matching switching power supply. There seems to be a high pitched whine on the transmitted audio. We have not tried to really locate the problem due to the rig only being here a few days. While we were trying to set the audio up (me at my house and he at his) I noticed a high pitched whine in the background. Though it might be a fan but did not seem to be the case as he turned the mic gain all the way down and the level did not change. Seemed to be less when he turned the poer up full. That lead me to believe it might be comming from the power supply which is a PS-125 switching supply.

Is the above a know issue that the combination has or do we need to look at something else ?

rec.radio.swap,rec.radio.amateur.equipment,alt.ham-radio.vhf-uhf,rec.radio.amateur.equipment,rec.radio.amateur.swap

Hi all, I had the FT-530 in my pocket the other day in the unlocked position.
When I removed it I must have hit a few buttons and created a problem.
The function button has been re-routed to the lamp button.
In other words when I push the Function button the display still shows "F"
but it will only program a frequency. By using the lamp button I'm able to do
some functions.
example: to lock the keypad I have to use the lamp button.
Any easy way out of this or is a reset in order.
If so, its a long way to reprogram it :-(

THANKS, Mark

924. Henry 2K help

Newsgroup: rec.radio.amateur.equipment
Date: 2003-01-27 03:59:37 UTC
From: thompson@mindspring.com
Message-ID: <b12ah5$mb8$1@slb9.atl.mindspring.net>
Source record: 34054

I have an old Henry 2K Serial #156 Floor Console. This is the old model with coverage of 80 to 10 but lacks the extra position to split 80 between 75 and 80. !2 years ago the bandswitch broke
The central bandswitch actually switches 3 units and is just a switch that was originally braised
on. The switch is connected to dial cord that switches the bands. The weld broke and I super glued it with the same glue you use to hold rear view mirrors on with.

I borrowed a diagram on how to take the Henry apart but have forgotten what to do. I know you can remove the box and RF deck from the power supply chassis after removing the plug for the blower and unsoldering the time delay trip switch. I don't remember how to get into the back of the front panel. I seem to remember the front panel tilts forward (still very tight to get at the hub).
I either want to super glue the hub back on the switch shaft or find a junker with a complete switch.

Any help is appreciated. E-mail me directly at thompson@mindspring.com.

As title says, I am in need of a FL-2100B band switch. Also, any information or experience about using a different than original Yaesu band switch would be welcomed.

Thanks!

JOSE

937. Yaesu FT-990 "Pin Diode" Upgrade - Worth doing?

Newsgroup: rec.radio.amateur.equipment
Date: 2003-01-27 18:41:53 UTC
From: Dave <dalden@comcast.net>
Message-ID: <61va3vk2bnv74jm049rr3314faih3tpeoc@4ax.com>
Source record: 34069

I have an FT-990 in mint condition that I really like and plan to keep for some time. I have heard that there is a pin-diode upgrade that is supposed to really improve the receive performance.

Is this true? What does it improve?

Is it something that the average guy who is pretty good with a soldering iron can do or should it be sent to Yaesu?

If it should go to Yaesu, can you send just one board or must the whole radio go?

How many diodes are required for the upgrade? Are they readily available?

Thanks,

Dave - - - WK8F

938. Transmitt noise in an Icom 746 Pro

Newsgroup: rec.radio.amateur.equipment
Date: 2003-01-27 19:59:16 UTC
From: Ralph Mowery <rmowery@ctc.net>
Message-ID: <xrScnSI8hsX8A6ijXTWcpQ@ctc.net>
Source record: 34074

It was pointed out to me that I made a typo in the origional message. The number below is the correct one.

A fellow ham has just received a new Icom 746 Pro and matching switching power supply. There seems to be a high pitched whine on the transmitted audio in the FM mode. We did not try ssb.. We have not tried to really locate the problem due to the rig only being here a few days. While we were trying to set the audio up (me at my house and he at his) I noticed a high pitched whine in the background.

Though it might be a fan but did not seem to be the case as he turned the mic gain all the way down and the level did not change. Seemed to be less when he turned the power up full. That lead me to believe it might be comming from the power supply which is a PS-125 switching supply.

Is the above a know issue that the combination has or do we need to look at something else ?

939. FA RADIO SHACK HTX-242 TRANSCEIVER

Source record: 34071

You will need either 2 or 4 diodes per front end filter section, depending on the configuration used. The HP 1N5767 is a good PIN diode, with a minority carrier lifetime of 1500uSec. You want a slow diode such as this, for good low frequency performance. I believe that Unitrode has an even better device, but I am not sure about the part number.
As far as performance improvements, you can expect a higher IP2 and IP3. Conventional switching diodes can rectify RF signals, if the get above the .6V knee point of the diode. PIN diodes are current controlled, acting as variable resistors. The resistance is inversely proportional to the current flowing through the device. 12 to 15mA of current is about right for a 1N5767; this gives an on resistance of around 1 to 2 Ohms.
An "average guy" can do these mods; just be careful, and make note of every cable location that you unplug from any boards that you remove. All you would be interested in are the diodes that are in the receiver preselector; this circuit may or may not be enclosed in a metal boxed in area, requiring removal of a cover. Sometimes, you have to remove the whole box, because it is a preformed, bent, one piece unit, with tabs that are soldered through the circuit board. I haven't seen the inside of your particular unit, so I can't advise you in this area.
Now, for the good news.....if the FT990 is using that quad JFET ring mixer that the FT1000 is using, you may already have PIN diodes in there. I would consult the service manual on this one.
I hope that this helps!

Pete

It's not a bad radio, but my favorite is the 570. The 570 uses the same type of quad JFET ring 1st mixer that the FT1000 and the Racal 6790 use. Same thing goes for the TS50 and the AOR7030, except that the 7030 uses a packaged Siliconix unit, I believe, the SD5400. For some reason, Kenwood does not advertise the fact that they use this type of mixer.
With the new breed of radios, it seems that you can't miss on any of them, so it becomes a matter of personal preference.

You're going to load 98 or ME on a P60 with 8MB of RAM and a
420MB hard drive?

I'm going to load up just such a machine with MY CD copy of
WIN 95 B. I have a buttload of 8MB DIMMS for it.

The 'puter was free. I can always find a home for it.
I just might hook it up to my network and hook a printer
to it in another room...

Anybody want a 486DX/2-66? VLB video and I/O. 20MB of 30
pin SIMM. Must be 4-4MB strips and 4-1MB strips in there.
Soundblaster with MKE CD ROM is extra. ;->

Its a joke on the first book many of us older people learned to read from.

Dick and Jane were a boy and girl in the reading book. It starts off
something like:
See Dick, See Dick run.
```

I have a National NCX-5 MK II XCVR c/w AC Power Supply & Crystal Calibrator c/w Manuals that I would like to sell...BUT have a nagging problem, I hope someone has had and/or solved in the past.
Would like to sell it in working condx...as that would be the right thing to do!

The Radio works A-OK generally, but when you tune in a station calling CQ etc, and you key the rig to talk to him/her, on SSB or CW, I find that the Transceiver transmits 0.5 Khz OFF Freq from the Received signal.
Of course the other station tunes off his freq onto yours...you tune to hear him better..and "ring around the rosy" we go.
I've retuned the radio a couple of times, and am now seriously looking at components in the VFO or the Receive RIT Circuit.

If you have any this situation, any comments to either confirm my thoughts or point me in a better direction would be welcomed.
Thank You for your time
Norm VE3CZI

I like to ask the "Computer experts", What was the code for setting
up a hard drive with debug, and seeing the blank stares. So much for an
IT department. :) I rebuild and sold a lot of XT and PCs, and went
through hundreds of used hard drives to test them using Debug. It was a
good idea to do a half dozen or more machines at once, because it took
so long to do a machine, and if one failed you stuck in another drive,
and started over. BTW, I still have a few 10 Meg Seagate SA-1004 8"
hard drives that predate the ST-506 interface. Geeky enough?

Bought some items these past years, and simply can't get around to
using
'em. Your turn ;o)

For Sale:

1. Factory stock Heath HW9 with WARC bands, manual, power cord,
copy of
Surrency mods from 'net. Unit has factory svc stickers on inside.
Good wkg
order. Scratches to metal in top, bottom, back are repaintable.
Face
good -- no scratches. No pwr supply, since I ran it off my Kenwood
station
supply.
$215 ono.

2. MFJ784 with manual, wall wart. Good wkg order. No scratches.
$95
ono.

3. Autek QF-1 audio filter, manual. Good wkg order. Peak, notch,
l-p.
Has internal mains-powered supply, felt on feet, and is modified with
in-out
switch nicely installed, a convenient touch. RCA-jack for a-f in;
1/4-inch
fone jack output. No scratches; only coupla small nicks on cover
edges.
$45 ono.

4. Comdel CSP-11 r-f speech processor, 2 manuals, data sheet,
schematic,
reprint of Jim Fisk's 6/68 HAM RADIO mag article. A few small
scratches in
case top. 1/4-inch tip-ring fone connector in, barrier-strip out.
No
power supply; case holds your desk down with 6 D-cells, or requires 9V
@ 18
mA. $75 ono.

5. Kenwood YK-88CN 270Hz c-w filter for TS-440S and other Kenwoods,
$60
ono. Can be used in HW9 with slight retuning of HW9.

***Personal checks are okay. I will wait till they clear, though,
which may take up to 2 weeks, B4 sending goods.
Postal money orders get same-day shipping.
All prices include conus shipping from Cincinnati, which will be via
UPS-ground-insured.
No guarantees except no DOAs.***

Tks for reading.

Yes you are!!! I like to ask the "Computer experts" how many 16 bit
slots are in an XT. Actually, debug ran a routine in ROM that did
the low-level format. Fdisk and Format are the only two steps most
ever see these days.

: <radioconnectionNO@cox.netspam> wrote:
: Best of both worlds: MSR2000 PA deck running on a Micor repeater
: base.

There are at least 3 or 4 different MSR PA decks... the highest power continous duty units are pretty much the same as the Micor PA units. The high power (non continous duty) 110 watt units need to be run light duty cycle or turned down to about 60 watts to keep from burning them up in busy applications. Many people use fans on them... not a good idea to trust them at full tilt using a fan... but turning them down to 60 watts and a fan is a great idea.

There are some 30 watt Canadian PA units which can output about 50 watts when run full tilt. I run them about 35 watts with no problems.

A lot of people mistakenly compare the Micor fast/slow squelch system (AS Board) with the MSR squelch system. You can set the MSR squelch system up to work just as good, or the same as the micor response. The MSR squelch is always sharp and responds well into the noise floor, depending on how your set it up. In reality, the MSR Squelch is much more flexible. I detail the setup in my External Controller to MSR text found on the http://sonic.ucdavis.edu Amateur Radio pages. Most people prefer to believe what they first read and what is the most simple to set up right out of the box. In fact, the MSR Repeater Squelch Circuit is more flexible in adjustment than the Micor circuit.

Cheers
skipp
http://sonic.ucdavis.edu

: I love the Micor RX and squelch system over the Mitrek. With a little
: work the 110 watt PA and control system can be retrofitted to an
: existing Micor base. Solves the obsolete PNP RF transistor replacement
: problems as well.

I just bought a new microphone and the (straight) cord is
badly kinked from being folded on itself. I'm guessing the
covering is neoprene. How do I relax this rubber without
destroying it?

TIA & 73
Don K6LTS

Thanks for the reply but the pitch of the tone is way too high to be a PL tone unless it is also generating a bunch of harmonics. It hs to be somewhat over 1000 hz in pitch, maybe 2 or 3 K hz.

969. FA: Yaesu FT-107 & Transverter, VFO, Tuner, Speaker/Patch and Speaker

Newsgroup: rec.radio.amateur.equipment
Date: 2003-01-28 20:41:46 UTC
From: captcharlie@hotmail.com
Message-ID: <b34c3e27.0301281241.44fa4e21@posting.google.com>
Source record: 34000

I've listed my Yaesu FT-107 stuff on e-bay. I put each item in a
separate auction, so you don't need to buy the entire station if you
only want a component. Although I didn't mention it on e-bay, most
items have users manuals.

Also, I'm tired of seeing e-bay links that are so long that they're
fractured. So, in an attempt to start a whole new trend, I'll just
post the item number. Let's see if that's easier to work with.

The transciever needs repair - probably the 120 VAC power supply.
It comes with both the users manual and service manual.
It's item # 3003826005.

All of the other accessories (off-white color front panel, matching
the FT-107M) are in good condition, as described in the listings:

The SP-107 P external speaker / phone patch is item # 3003807405
The SP-107 external speaker is item # 3003813233
The FV-107 external VFO is item # 3003810961
The FC-107 external antenna tuner is item # 3003817307
The FTV-107 transverter (2M/70CM) is item # 3003820004

This made a great looking station. The off-white color of the front
panels really stands out in a world of charcoal and black radios.

If you have questions, please contact me through e-bay. I only use
the Hotmail return address to keep the spambots from getting my real
address.
I get so much spam at Hotmail, I simply never check it.

Charlie

AES shows this radio from $530 to $550 in their used equipment
section of the fall/winter 2002 catalog. Since AES is in
business to make a profit, you might sell it for less than
their price.

If he's using Windows 95 his operating system is DOS. Windows 95 is
not an operating system.

No, its not, but 95 only installs part of DOS. You have to do a
separate install of the rest of the files.

Crosspost to enough groups?

Why not just use MS-DOS 6.22, FreeDOS or Linux with dosemu depending on
how demanding the exactness of DOSiness you need.

MS-DOS 6.22 should be $5 or less now days. Win95 is still about $25 on
eBay and the like. Linux and FreeDOS are free with no moral issues like
warez copies of Microsoft OSs.

1000. HT's with builtin APRS

Newsgroup: rec.radio.amateur.equipment
Date: 2003-01-29 19:30:11 UTC
From: wanderlyte@yahoo.com
Message-ID: <99795dbe.0301291130.28490d4e@posting.google.com>
Source record: 34032

I am planning to take my Technician's test in a week or so, and have started doing research on handheld radios. One of the main reasons I am getting into Amateur Radio is APRS, and I am looking for handhelds with APRS capability, both transmit and receive.

I know about the Kenwood TH-D7. It looks pretty good, but I'm wondering if there are any other HT's currently available (or coming soon) with the builtin capability to recieve and display APRS info? I want to be able to determine the location of other group members, as well as reporting my own location, with the minimum amount of hardware.

Thanks in advance,

--Matt

I've started looking into this a bit myself. No complete off-the-shelf
options.

You need the following pieces for each station:

-A radio to tx/rx on the specific packet frequency, could be a single
frequency one also
-a TNC (essentially a radio modem), which is built into the radio you
mention
-a second radio if you want to speak at the same time
-A computer device, which could be a PDA or pocket PC, with own
display and input method
-appropriate software to run APRS on it
-a GPSr if you want to transmit a dynamic position
-interface cabling as required

>mention
>-a second radio if you want to speak at the same time

These first three are handled by the Kenwood D7 ht. You can run voice and
APRS on separate sides of the radio, or you can set the APRS to transmit
a 'tail' on the end of each voice transmission. That's the mode I often
use when airborne. Each time I unkey the mike, it sends my position. The
TNC is built into the radio.

>-A computer device, which could be a PDA or pocket PC, with own
>display and input method

Again, the D7 can do this to a limited degree. It won't show you a map
with the stations on it, but you can send and receive text messages with
the keypad and display, and see basic information about the other
stations including how far and what bearing they are from you.

>-appropriate software to run APRS on it

Built in on the D7. Or you can run the radio as a kiss TNC and run
winaprs or some other progam on an external PC.

>-a GPSr if you want to transmit a dynamic position

Yes, and if you do have a GPS, and one that has bidirectional
communications (I've done it with a relatively old Garmin 12XL) you can
get the D7 to send the locations of the stations to the GPS and they will
display on whatever map it uses.

>-interface cabling as required

Of course. On the D7 this is a relatively simple 3 wire cable and a 2.5
mm stereo plug.
>
>Happy trails,
>Gary (net.yogi.bear)
>---
>at the 51st percentile of ursine intelligence

Gary, unless you need more robust I/O capabilities than the keypad and screen offer, I think the D7 and a GPS are pretty much all you need. From what I hear the D700 mobile is even better this way (more screen real estate), though I haven't run one myself yet.

The only other radios I know that have built in TNC's are the alinco Dr-135, which comes in a packet and non packet version, and the TS-2000 which has a built in TNC for things like DX spotting.

Thanks, lots of useful info here.

One big plus of a single unit with all of the features is that you
don't have to deal with cabling and interface issues.

oh yes...

wasn't it something like:

C:>DEBUG

-
-g=c800:5

It's been a VERY LONG time since I did that!

For the non-licensed radio world, Garmin has an FRS/GPS handheld combo
that does all this in one package. Perhaps over time if GPRS grows
in use the amateur manufacturers will offer an HT with the GPS built
in.

It will be interesting to see how this does in the marketplace. It is
limited compared to APRS, becasue it will only transmit its location
when you push a button, and its range is more limited.

Could get interesting if say, Disney World worked with Garmin to have
downloadable map in the Garmin format, ready to drop in to your RINO
or regular GPS.

Remember that the amateur radio market is tiny compared to other
markets for personal electronics.

Happy trails,

"Run" as in "execute", silly.

Back in those days, there were several programming 'languages' that
"compiled" the source code in to a compact representation, and which
required a "run-time interpreter" to actually execute it. This provided
for 'hardware independance, because you could move the "compiled" programs
to any system where the 'run-time interpreter' had been implemented.

A couple of the better-known examples of this approach were "Business Basic",
and "dBase".

Both of those languages provided a MS-DOS program called "RUN.EXE" which _was_
the "run-time interpreter". You really _did_ do things like "run invoice.prg".

>Remember the big upgrade with WIN95? Being able to
>download a file and send it straight to the floppy drive!

I could do that under DOS 1.1, using the KERMIT comm. program.

I even did it on machines that _did_not_have_ a hard-drive. Sometimes I was
writing to the 'current' floppy, sometimes to the 'other' one (when the
machine was "loaded" enough to have *TWO* floppies, that is. yeah, once
upon a time, that _was_ a "high end" machine :)

I had to write a special program to do it on a "PC jr", because _that_
box was deliberately crippled and couldn't service the serial-port
interrupe _while_ writing a sector to disk. Thus, had to do an [XOFF]
before issuing the disk write, and an [XON] after it finished.

The _really_ funny one was to, in a computer *store* -- praticularly one
like the computer department of a Sears (where the help usually was *not*
terribly computer-literate -- set the prompt to the 'screen erase' sequence,
after making sure that 'ansi.sys' was loaded.

It was simply _amazing_ how many supposedly "knowledgable" salespersons were
utterly unable to cope with, and/or "fix" that particular "gotcha".

I never used a DTC drive. I looked through an old reference just now though, and it looks as though DTC used the same command as Western Digital.

IIRC, the original 10meg drive that came with my XT used the command g=c800:1

It's been too long that I don't recall the difference between the :1 or :5 part of the command, and can now find no reference to the :1.

I still remember "upgrading" to a 30meg drive that cost me a fortune (for me) of $300 at the time, and hearing the steady click, click... as the stepper motor slowly rotated during the low-level format process.

I have a better idea. in three parts:
1) why don't you *stop* posting in HTML, since it just makes your posts
an average of *FOUR*TIMES* larger than they need to be?
2) recommend you learn to use the 'killfile' capability of your newsreader,
so you can pre-emptively 'ignore' threads and authors that bore you.
3) recommend that the rest of the world consider using _their_ killfile
capabilities to 'ignore' those with their nose so bent out of shape
about a little humor.

I'll start.

plonk

(that's the sound of an author's name hitting the the 'kill file', Murray)

Neither is MS-DOS (it's merely a 'glorified progam loader').

It is said:

"Windows is a 32-bit graphical interface,
for a 16-bit extension,
to an 8-bit operating system,
written for a 4-bit processor,
by a 2-bit company,
without 1 bit of skill in what they were doing."

Methinks the description is somewhat _generous_.

I had the loaded XT with 2 360K floppies, 20MB ST225, multi I/O card,
CGA adapter and CGA monitor. I had a 286-12 with EGA and a 40MB ST4051.
I had a 386DX/40 with 2 Maxtor full height 140MB XT1140 drives. The
damn MFM cables would get flaky over time. My first IDE drive bought
around that time was a 1.2GB that cost $250. Being in the business,
I get good stuff at the right price. No Pavilions or emachines or
Dells or Gateways or Aptivas for me. You can buy that sh!t. I won't.

I'm ending this crossposted thread here. Have a gooder.

Some controllers had "advanced" utilities accessible via

-g=c800:8

and the "c800' wasn't necessarily reliable. it could be "whatever"
the base address for the on-board ROM was set as. usually via
jumpers, so you could have more than one controller in the system.

impossible. the first 5 bytes of the ROM were 'reserved'.

the first 2 are an "identifying signature" for the 'start of ROM'
hex "55 AA"
the 3rd byte is the size of the ROM in 'paragraphs'
the 4th and 5th are a 'short jump' instruction to the start of the
ROM 'power-up initialization' code.

The "POST" bios code scans all 'high' memory, looking for the 'signature'
on paragraph boundaries. when it finds one, it a) does a 'far call' to
{base_address}:3, and b) when that returns, skips over the declared size
of the ROM, before continuing the search for more 'signatures'.

Sometimes there were 'multiple' entry points in the ROM, usually at
3-byte intervals up from xxxx:5. I know I used some that had "advanced"
configuration stuff at xxxx:8.

These days, "I dunno" applies. I don't keep that stuff memorized.

However, consulting my Unix 'termcap' file, it looks like the
requisite magic is:

prompt=$E[;H$E[2J

the first escape sequence 'homes' the cursor (top-left corner),
then the second one does an 'erase from cursor position to end of screen'

1031. MFJ 1786 Magnetic Loop Antenna

From: Dirk Schuurs <pa3gwl@amsat.org>
Message-ID: <b1ajpahve3@news.hccnet.nl>
Source record: 33963

Hi,

I'm looking for a very small, but good HF-antenna.
My eye catched the MFJ 1786 Magnetic Loop antenna.

Can somebody tell me their results with this antenna.
It's for indoor or balcony use, just abt 5 meters above groundlevel.....
Other tips for good and small HF-antenna's are welcome too !

Regards,
Dirk PA3GWL

1032. FS or trade Icom 718

I'm looking for any kind of printed information on
the Lafayette HA-410 tube-type 10m AM transceiver.
Manual, schematic, service information, a list of
what tubes go in what sockets, wiring information
for the power cord and mic, etc. I just bought a
"fixer-upper" HA-410 that has no tubes installed,
no power cord, and no mic. Any help will be very
much appreciated.

If you happen to have an original HA-410 manual,
I would like to borrow it, make myself a copy,
and scan it for upload to the B.A.M.A.

I did mine from memory. ESCAPE LEFT-BRACKET 2 J came to mind.

ESCAPE LEFT-BRACKET ; H. That's move the cursor home.

I wrote ansi.sys screens for people back then.

OK. Back to the 21st century. I'm done with this thread.

Source record: 33982

Hi All;
I was passing by 7.238mhz the other morning at 7:00am EST & ran across the JHS 22 radio club net
Seems that Joe WB2JKJ has elected to have Glenn K1MAN, be on with him now.
All that seems to be discussed was the cold temp, actually not much of a discussion, check ins gave thier local temp , and for this we need a net that thinks they own 7.238
It seemed to me like a place for K1MAN to give commercials on his infamous IARN & for Joe WB2JKJ to act like a FM broadcast station by signing & talking like a "rap" artist, UGH!
Nice to act that way around children too?
They compliment each other real nicely.
All they really do is Promote thier private endevours it seems to me!
How can it be called a Classroom net when the children are not even in class then? Seems to be only a way to advertise, nothing else!
Of course, only one's opinion :-)

AM-6155/GRT-22 FAA Surplus Linear power amp, Specs: 225-400MHz, 50W out (conservative) 10W in, Eimac X651Z/8930 final, extensive metering, can be converted to 2m, 220 or 432, rack mount 7" high, 80 lbs, ITT (model 3212), Part of AN/GRT-22. This Amp uses Emiac X651Z/8930 in silver-plated cavity-drawer; 175-turn TUNE counter dial. Main chassis has solid-state power supply and buffer amp/mulitplier; panel meter monitors voltages. Requires 105/120/210/240 VAC 50-400 Hz and +20 V req 60 ma. +20 V keyed; 7x19x18.5, 80 lbs shipping weight. The HV Supply from AM-6154 is Loaded with GREAT parts to include a 1752V at 270ma transformer, 8HY 300ma choke, 100K ohm 95 watt resistor, 2x5mfd 3KVDC capacitor, & rectifier circuits card. Most hams use these amps as a 2m or 220 Mhz or 432 Mhz Linear. After conversion, the output power is approximately 400 watts. One ham has used a 4CX400A (available from Svetlana)to raise the output power to 450 Watts. Do a Google search of AM-6155 and you will find many references to conversion information. Used - Excellant Condition (NOT TESTED) but sold AS-IS.. Email if you have any questions. Buyer will pay shipping (approx 90 lbs) from zip 31088 and a packing charge of $20.00. I will ensure the item is packed to survive the trip! 73, Larry Keith KQ4BY

I need Plessey Plug with 3 pins. You may know the type, they are metal with collars on for screwing in the sockets. Kind of a metalic grey colour. Military gear tends to have this type of plug and sockets. Anyone know the part number? This three pin I'm after is for a power lead. In fact getting the power leads would be better than my just getting the plugs. If anyone has these plugs or the leads please contact me directly at:

news_emailREMOVETEN@ntlworld.com

Of course remove "REMOVETEN".

I'm near Wakefield, UK, so if anyone has my needs who lives in vicinity perhaps I could collect.

Thanks.

P.S. Plug for the old CT150 Oscilloscope. Right-angled plugs better than straight.

Hi Norm, that TM-721 display was the beautiful multi colored display and the original.
Towards the middle of the run Kenwood offered the "normal" LCD display with the driver board for about $25 dollars (American). It made it real easy to see in strong sunlight.
Still have my 721 and use it every day!!!
Good Luck, Mark

Source record: 33995

I have always loved this radio, but I am not well-suited in learning how to program
it. Here are my questions, in descending order of importance to me:

1. Have any of you ever been able to program an odd repeater split ? Page 42 of
the Manual shows how to do this , but try as I may, it will NOT work for me.
This is to program an independent transmit frequency, not dependent on a
standard repeater shift. I would like to program this radio to try to
work the ISS with the ht, but cannot program the transmit freq that I want.

2. On **one** of my memory channels, there is a "P" to the immediate
right of the channel number. Thus, my channel 17 actually shows up
as 17P. I have searched and searched the book, but find no
information as to what the P stands for. At first I thought it might
be a priority channel, but page 50 in the manual says that only channel 1
can be used for that.

3. Have any of you ever learned to use the programming software for this
radio ? I find the software (ADM) instructions even worse than the ht
manual itself !!
I have **never** been able to use the software.

4. Do any of you have a rapid charger for your unit? Do you know if the
CD-15 is
truly a rapid charger, or just a convenient drop-in for the ht, using the
wall trickle charger ?

I hesitate to raise these questions but I have studied the manual very
closely and
cannot find some of these answers. I continue to believe that this
manual is very poorly organized and written, and the American software is
even worse.

Thanks for any help !!

Switch a door knob cap in series with the tune cap, roughly half the cap of
the tune cap should bring it down enough to get the tuner up to 10 mtrs.

1068. Broken Molex Power connector

Newsgroup: rec.radio.amateur.equipment
Date: 2003-01-31 03:46:12 UTC
From: David Shalita <davidr@cnmnetwork.com>
Message-ID: <3E39F183.92E92C2A@cnmnetwork.com>
Source record: 33800

My 440 RF Concepts Amplifier RFC 4-32 has a broken Molex power
connector. It is a 2 pin nylon housing
part. The chassis mounting nylon housing became brittle and part of
housing broke off leaving the connector loose.

On the Molex web page, I could not find a connector like my part.

Does anyone possibly have the Molex part number for
the male and female connectors I need?

Thank you for any help.

Greetings,

Approximately a month ago I purchased a radio from someone on the newsgroups. I paid for the item using PayPal but never received the radio. What I have received are a few email messages over the time with some interesting excuses. While I am a trusting individual by nature, I am afraid that I have been ripped off and will never seen the radio or my funds.

What makes matters worse is that I stumbled upon an alias that he uses on Ebay and got quite an education when I read his feedback.

I need your help. I know that there have been some "individuals" over the years that have been mentioned on the newsgroups. I also know that many of you have "gone the distance" to get your equipment or money. What can one do legally (if anything) to bring this fraud to the attention of some authority? Can a complaint be file with the PayPal folks since I use a credit card? What are the chances of getting my money back?

Any help would be greatly appreciated. Please contact me directly at "cindyd1@enter.net".

Thanks in advance for your help,

Doug

I wish I could help, I've been ripped off by people in the newsgroups, on ebay, and even on eham.net, but can't seem to find any recourse. :(One guy in here got me for about $500 worth of computer peripherals and a $100 money order. I have reported him to his local police (as have others) but nothing has happened so far. Guess I need to go the mail fraud route and report him to the Postmaster. Another one got me for $158 money order for a Yaesu HT. Yet another from this NG got me for an IC-706 that I traded him for a 1.4GHz computer... that one lives in Canada, and Canada Post doesn't seem too interested in doing anything about it..

Contact the credit card company ASAP, that is your only hope. Post Office doesn't care, FBI doesn't care, Attorney General doesn't care, your local law enforcement doesn't care, the law in general, in any jurisdiction, doesn't care. Forgery doesn't matter, neither does fraud or identity theft. I speak from experience and I challenge anyone on here to prove me wrong. Sorry to say it in so many words but your money is gone and you will never see it again.
You got took, accept it and go on because no matter what you do you are wasting your time if you think you will ever see a dime out of anyone. BTW, what is this jackmeat's Ebay name, maybe we can have some fun with that. Better yet, where does this jerk live? If he is near me I'll go over and ....let him know you are thinking of him.

Best Wishes,
John in Missouri

I doubt that the names are real, or even the addresses accurate... but..

John Rea (aka John Dillinger)
1030 Pine Rd
Alpena, MI
Paid him cash (USPS money order) for a radio he never sent, has not
contacted me since he said he received the money order, e-mail no longer
good.

Frank (Frankie) Sanborn
424 Nick St.
Newark, DE
Traded him computer peripherals plus a $100 USPS money order for a used
IC-706. Apparently he ran similar scams on others. Local authorities are
supposedly investigating.

John Stewart
(whereabouts unknown)
Surrey, BC
Canada
Traded him an IC-706 for a 1.4 GHz computer. Made other trades with him as
well. After he received the 706, he moved... most other items were returned
by Canada Post.

I have purchased about ten radios from the NG, eHam, QRZ swap, etc. I always send a USPS money order and require the item sent to my PO Box. This involves the Feds.

I have never had a problem--and I have always bought from a person with a ham call, but suffice it to say I have been lucky, ...

If the character that ripped you off is in southern Minnesota, let me know

Like any tuner, it is adjusted for best conditions. The manual should give
you the proper procedure.

I think that is an overstatement. A couple of years back I was beginning to get very worried about the non-arrival of a printer I had purchased ($500) on eBay, paid for using PayPal. But I was contacted by the seller's local police department (somewhere in TX) before I ever got round to making any official complaint. It was a Dutch auction, and apparently one of the other buyers made an official complaint before I did, and the police then contacted all the other purchasers. I got all my money back.

HI folks,
Got some helpful info on replacing lithium batteries in this radio a
few months ago. THe guy who ended up doing the job for me made a mess
out of the front face of the radio, but it works as long as it stays
in the shack on a power supply.

Anyway, I have a problem. wE cannot find its owners' manual, and for
everything around here except simplex we need ctcss tones.

Can anybody describe the procedure to select a ctcss tone frequency?

Thanks and 73

You can eventually get your money back from PayPal also -BUT it will take forever! Pay by credit card even though you use PayPal & you will not have a problem. Like an earlier person said "you can get it back with no problem if you act in 60 days". Don't let PayPal take it from your bank - pay them with plastic or PayPal will stretch it out for weeks! I know they are doing it to me even though they are the one's who messed up!

I think you will have to tune the thing every time you
change the band. It may not be very convenient to use
if you like jumping from one frequency to another on
different bands.

Such artificial 'grounds' work by cancelling (or rather:
compansating) inductive or capacitive reactances of
available grounds (like water pipes, etc.).

I'm not sure it will make a big difference for _receiving_
signals, though.

Hi,

Here's the search page from ebayersthatsuck.com, a revenge page by a New Jersey cop that was the subject of a recent nationally syndicated article: http://www.ebayersthatsuck.com/ebayersthatsuck.htm

Check it out. Listing your perp's ebay handle there might help--if it's not already there (which will tell you something, too). You just list it, and tell your story. Then you email your little friend with a link the page. Then you can do things like go to his/herother auctions, and email all the bidders the link to the site. In some cases, if the seller is not a total thief, they will do anything to make you go away.

The site has helped get a number of ripoff artists get banned from Ebay altogether.

There are other, shall we say, more vigilante-style methods of ripoff revenge, but you'll have to find them out for yourself on the net. Search on Google or any other search engine on things like "Ebay revenge" or "Ebay ripoff," etc., and you'll probably turn up a number of other interesting ideas.

Enjoy!

These plugs have many different configurations: The locating
key varies quite a bit. You'd be advised to post a picture
or drawing of the business end of the hole it goes into.

Sure it's not a socket, i.e. female?

Hello All

What is the difference the FT-100 & FT-100d ?

I can get the FT-100 for $490........

Thanks very much.

The sale on these power supplies ends tomorrow. It's a great deal. I purchased one today and hooked it to my TS 2000. Very quiet. You won't see that price for a 25 amp power supply again. Pick one up while you can; use it as a spare.

I personally have been lucky so far (100% success rate) with about 70
purchases, one for over $3000.

I understand that PayPal's complaint window is VERY short, like 30 days, so
if you don't file papers that soon, they don't want to hear about it. Seems
counter-productive to me, since we all want to give sellers and buyers the
benefit of doubt and sufficient time for goodies to arrive.

I agree with credit card - I ALWAYS use it through PayPal, even offering to
pay the seller whatever fees they would incur by letting me have the
convenience of using the credit card. That usually makes everyone happy.

Hello Doug..

If you used a credit card, file a dispute with your credit card company.
They will reverse the charge to PayPal, and then debit the user that you
purchased from's
account. I have done this numerous times and it works.

AM-6155/GRT-22 FAA Surplus Linear power amp, Specs: 225-400MHz, 50W out (conservative) 10W in, Eimac X651Z/8930 final, extensive metering, can be converted to 2m, 220 or 432, rack mount 7" high, 80 lbs, ITT (model 3212), Part of AN/GRT-22. This Amp uses Emiac X651Z/8930 in silver-plated cavity-drawer; 175-turn TUNE counter dial. Main chassis has solid-state power supply and buffer amp/mulitplier; panel meter monitors voltages. Requires 105/120/210/240 VAC 50-400 Hz and +20 V req 60 ma. +20 V keyed; 7x19x18.5, 80 lbs shipping weight. The HV Supply from AM-6154 is Loaded with GREAT parts to include a 1752V at 270ma transformer, 8HY 300ma choke, 100K ohm 95 watt resistor, 2x5mfd 3KVDC capacitor, & rectifier circuits card. Most hams use these amps as a 2m or 220 Mhz or 432 Mhz Linear. After conversion, the output power is approximately 400 watts. One ham has used a 4CX400A (available from Svetlana)to raise the output power to 450 Watts. Do a Google search of AM-6155 and you will find many references to conversion information. Used - Excellant Condition (NOT TESTED) but sold AS-IS.. Email if you have any questions. Buyer will pay shipping (approx 90 lbs) from zip 31088 and a packing charge of $20.00. I will ensure the item is packed to survive the trip! 73, Larry Keith KQ4BY

Seems a heck of a lot of bother. Probably best to put in a modern socket
and plug.
May do that tomorrow.

The insert can be removed and replaced in the appropriate orientation. Dead
easy. A plug is that which goes on the end of a cord, can be male or female.
The fixed part on the equipment is a receptacle.

What are the general views of the Ramsey FM25B transmitter?

I don't need to broadcast to the world, just my backyard.

Clarity is my main concern.

Mogal

I've got a bag full of these. As J says, they come in various
flavours, but it's often just a matter of dismantling and rotating the
innards. If you can e-mail me a close-up, I'll see what I can do.

But unless you're keen on preserving the originality of the equipment,
you may do better to replace the original with an IEC socket (as used
on computers etc.)

> Sure it's not a socket, i.e. female?

One would hope the mains ended up on a female, but they weren't always
too safety-consious in ye olde days (ever heard about the 200V DC
mains model train sets!)

>
> Can anybody describe the procedure to select a ctcss tone
> frequency?

Tone Frequency Selection:
Press the F key for longer than one second. The F indicator will
begin to flash. Press the TONE/T.ALT Key within 10 seconds of
pressing the F Key. The current Tone frequency will appear in the
display. Rotate the Tuning control to select the desired Tone
frequency. Press any front panel key to return to the normal
frequency display.

Tone Option:
Press the TONE/T.ALT Key and select the desired Tone mode. When
the T indicator appears in the display, the transmitter will transmit
the desired tone.

Does this really work? I know that if you purchase goods from a
vendor directly, and have a problem, the credit card company will
usually stand behind the consumer in a dispute, i.e. they will credit
back the card if you return the defective items.

I've heard that CC companies will not do this with Paypal-purchased
auction items. Their position, apparently, is that your dealings were
with Paypal, and Paypal committed no fraud. They acted at your
behest, and transferred money to the seller, who is the real criminal.

Now this is all heresay, I've no personal experience trying to charge
back something I purchased on ebay using Paypal.

Comments?

I was under the impression that John Townend shut up shop, auction his stock
and retired last summer. Can anyone confirm this?

I've recently purchased several 3pin Plessey mkIV mains leads from Colomors.
these were NOS and cost approx £11 each. Not cheap but then again, it's
only money:-)

Mike, I had occasion a number of years ago to purchase an item via USPS from a guy in FL, I'm in CA. I never received the item, and went back and forth with letters, phone calls, etc. ad nauseum. I finally filed a complaint with the USPS
Postmaster.

To make a VERY LONG story very short: It was a monumental waste of time!! I got nowhere, got nothing, got no satisfaction (sounds like a song!), and just ended up eating the loss. The govt is a paper tiger, and will eventually give up on these small frauds unless there is a large number of victims, or you happen to get lucky and find a very zealous prosecutor somewhere that has jurisdiction. Sorry to sound so cynical, but I have had numerous contacts with law enforcement (as a victim, I own a retail establishment) and 90% of the time, it's a waste of time. There's just too many other, more pressing, matters to occupy their time; that's the bottom line!

Dana

If goods are not received then the credit card company will usually give the funds back, Paypal included.
The post office can be of assistance if a money order was issued, I am currently going through two routes with assh*les called Jerry Gripp and Paul/Peter Lee, one in Canada and one in NY.
I have had my Paypal account credited and the post office are giving 45 days for Gripp to respond before issuing me a re imbursement of my money order and then the Attorney General is involved as mail fraud.
Now it take a very long time for the wheels to get in motion, be patent and learn by your experiences.
I buy over 50 radios a month from the net and have not had too many problems, generally Hams are honest with a few bad ones spoiling it for the rest of us
Good Luck anyway
Martyn

I have for sale in excellent condition a Yaesu FT-1000D HF radio. It was bought new in Feb.93 and has the 6.0 firmware and from a non-smoker. The front face is perfect, no scratches, no dents and no lettering worn off. The top and bottom covers are perfect....I have the original manual and have the original inner and box along with the Yaesu hand microphone....I will take $2000 plus shipping....Email me if you have any questions..WZ1U Steve / Lakeville, Ma.

Thanks Gary, but this is not like our modern battery packs- it is a
metal enclosure with large snap on clamps, antenna port, lamp enabling
switch etc. Weighs about 3 pounds

Hi fellas

I am about to purchase a Kenwood TS520 and was wondering if there is anywhere i can download a copy of the operators and/or service manual. It seems that there are places that will sell them at a premium but i was hoping not to have to do that. I am mainly interested in the transmitter tuning procedure as it has been years since i had a valve transmitter to tune. Any help would be greatly appreciated. My email if anyway can help is tstone12002@yahoo.com.au

Cheers

Tony -- try URL:
http://hamradio.online.ru/sch_eng.html
I haven't downloaded anything myself from there - so not sure how well it
works.

Also Sams may sell a manual reasonably or any of the vendors at URL:
http://ac6v.com/manuals.htm
At least one of them there has the service manual for $23
But postage to VK may be prohibitive

>The fixed part on the equipment is a receptacle.

In my book a plug has pins which mate with a socket. E.g. a
3.5mm stereo jack plug and its corresponding 3.5mm stereo socket.

It's rather dodgy to have mains on a plug.

Dale:

Some of them will rebuild battery packs using an existing shell, for
ones no longer made. With some skill, you may be able to do this
yourself.

Do you know what form the internal batteries are? If it is a stack of
AA NiCads it is easy, if it is a 12V gelcell, you can also find
something.

Happy trails,

Dimitris- this beast is tuned WHILE TRANSMITTING, for maximum current on the rf ground current meter, and like most meters, has much greater sensitivity at higher frequencies. MFJ's web page should have the manual for this (and other products of theirs). from what mine does , the "c" position of the inductor, seems to max with the capacitance control, the hightr freqs will be more like "F", or "G" to tune with the capacatance control . and dont grab the "ground" insulator, or wire to your counterpoise , as it can become a "VERY SHOCKING EXPERIENCE" !! Jim NN7K

Here is something that may be radio-related...?
A HIOKI model 3265 clamp-voltmeter/ammeter as seen here:
http://www2.aimnet.ne.jp/kandori/hioki.htm

Not my photo, sorry!

It's about 8" long and is a very popular item with the local power company linemen. They use the model 3262 I believe..
It works like a champ, It tests my RS35A very well and is also good for the Ol' breaker-box.
Although the specs on that page say it starts at 100A, not true... I tested my HF rig and GM300 and it read right off.. 19A and 7.9A transmit, 4.8A with everything at idle, probes at 12.4VDC.

Like new, not a scratch! Includes a nice big hardside "binocular" style case, user manual and standard VOM probes that plug into the side.
Great for checking those batteries/chargers on the hill, the generator and all that dandy stuff.

For trade... Whatcha got?

Cash accepted only as a last resort, willing to pay some difference on items of interest, etc.... Commercial radio, equipment, etc...
Mail away and I'll speak up if I see something interesting.
thanks!
Randy

Actually it's plastic. It goes on the back instead of a linear amp.
There's no antenna port, that's why there's one on the front.

It uses 9 C cells. There was an option for a NiCad charger to plug
into it. It splits in half to install the batteries.

I'm new (new license, not on the air yet), and have a question about transmitter tuning. I have a Kenwood TS-830s, and the manual tells me to "dip" the plate current. Does this mean I set it for minimum deflection? The manual calls for "maximum" deflection, but I find several places in the manual to be an odd translation, and sometimes contradictory.

Is there anyone here who can go through the tune-up paces for this transceiver?

Thanks,
VA3SLJ

I got the same deal on Friday, no box, no manual, last one in stock,
double the warranty. Nice supply, I opened the cover to look inside and
seems to be just fine. I have not tested it to max current but I intend
to use it with my TS2000. The voltage is at 14.02 I think within specs.
There is an adjustment inside.

You set the drive for maximum deflection (PA current), then adjust your tune and load for a dip in plate current. (have your carrier level down to as little as you can get away with, to save your tubes).

The dip the plate can be confusing. When tuning up a transmitter that has tubes in the final stages there are three knobs to adjust (usually) . One it the Drive . YOu turn it up to the meter (which should be set to Ip or Plate current) moves upscale about 1/4 the way. Then you adjust the Plate knob (tuning) tuil the meter falls as low as it will go (this is dipping the Plate). Then you turn up the Load knob tuil the meter goes back up. Then back to the plate knob for another dip. You then increase the drive control tuil the plate current goes back up . Then you dip and load the plate again.

Or you could just put a wattmeter in the antenna line and give the transmitter a small ammount of drive and andjust the Plate and Load knobs for maximum output. Keep the drive low enough that you do not exceed the maximum Plate current.

Accidentally heard a newby Ham on a repeater call and ask
some folks if this power supply was any good, so I looked it up
in the catalogue, saw it was a switching supply fully rated aat 25 amps
told him it looked like a great deal to me, then I immediately went
to the web site and got a coupon in case the store did not know
what I was talking about (which is usual and they did ask me if
I was interested in a cell phone while I had mine in my hand),
and picked their last one up!

I am not a ham radio operator, but a neighbor of one. Since my neighbor has erected 3 towers in his backyard, I have been receiving interference on my cable tv, and a couple of my telephones and my cable modem. Other neighbors are having the same problems. We would like to know what we can do to block the interference. I bought a filter from Radio Shack for a TV but it hasn't helped.

I enjoy my technical toys, and don't want to complain to the neighbor about his ram radio interest.

Any suggestions on how to solve my interference problems, and the best method for approaching the neighbor with the ham radio if they should not work. I would rather have his help in solving the problem than have him pissed off at us.

Ellen

hi ellen
if he is a legal ham i would suggest going over and talking nicely to
him and explain the problems you are having noting the date and times
it happens so he knows what band he is operating on and he should be
willing to install filters on his gear and ground the stuff too which
should help
i would also contact your cable company and have them come out and test
the lines for leaks and repair them if there are any
just be polite and he should help you out we hams are nice folks
but keep in mind some things like cordless phones will pick up stray
signals and there isnt anyhting anyone can do about that
good luck

Well there is some good news! Any of the transactions that have taken place through the mail, you can summit amail fraud complaint which will take months but does typicaly force resolution. If you have paid an person VIA a USPS money order then it is a felony, and the Postal service will prosecute. Now don't jump the gun here they are not very quick I have 4 cases pending now one is ove a year old but it is finaly paying off 6 months I would consider a quick turnaround but even at that it is better than total loss. The number one thing to do is post there name address used and as much info about what has transpired in this way the cons are learned by all out here and then become less of a danger to all. Just remember that strange things do happen in peoples lives at time and it is important to give all a chance to resolve, in time of crisis of family ect. people priortys do tend to get shifted a little but most people I beleive are basicly honest and will get things resolved. There are those out there that are just theives and our best weapon against them is information on there methods so we can watch the patterns developing.

I a ham operator and I also have cable TV. I used to cause some problems with my TV reception. I had the cable people out here and it took them about half of the morning to correct their problems. They are suspose to operate a closed system so other services can not get into their system and they can not get into other services as they share the frequencies.

As far as the telephones go , they should not pick up the radio frequencies. You need to contact the makers of them and ask for some filters for them. Go here for some info.

TO MY NEIGHBORS:
NOTICE CONCERNING ALLEGED TV INTERFERENCE FROM THIS TRANSMITTER.

1. You have called to my attention the fact that transmissions from station are causing interference to your TV reception.

2. Interference such as you describe is not caused by HAM Radio operations, as Ham stations cannot and do not cause TV interference. Nor is this interference the result as any malfunction of my equipment or poor operating habits - for my station is NOT a Ham station.

3. Be advised that your government is placing a $500 per year tax on all TV receivers. Because it difficult as this late date to obtain a listing of TV set owners for the taxation purposes, your government has established a vast network of TV jamming installations with the hope that TV set owners will make themselves known to these jamming stations so that their names can be added to the tax rolls. This station is just such an installation.

4. Your government greatly appreciates your turning yourself in. You will be one of the first taxed. You have also verified that this jamming equipment if functioning properly.

5. We have also made a note of the time and channel you reported this jamming. This information will be given to several TV program rating surveys.

6. You have therefore provided a valuable service to the entertainment industry and to your government.

7. So that you will not be the only one taxed, please be patient as we continue our TV jamming operations.

Operator
Office of TV Taxation

Hi,

I need some help.

2 weeks ago, i've been upgrading my FT-726r Transceiver with 432MHz option.
So at this moment all is good, but today, no receive and no transmit only in
430-440 module (2m is OK).

Is there anybody you've got the same problem in the past ? perhaps is it a
classical failure for this nice transceiver.

thank you for some help.

This can be a difficult subject to deal with.... and then again, not. Depends on how you and your neighbor decide to behave when the problem is brought up.

Some people have already responded here with some good advice. I would suggest you contact the ARRL with the same question you posted here. That is one place where you will get an honest answer with some very viable options.

Of course bringing this up with your neighbor will be unavoidable if you can't remedy the problem on your end without his help. Sounds to me like you have the right attitude. I only hope he does too, when you approach him. Get what information you can from the ARRL first, then with your new information, go ahead and politely raise the issue with him. Hopefully he can help you. If he turns out to be "unhelpful" at best, you may be in a difficult position as he probably is operating legally, and the equipment you are using is likely picking up his transmissions due to poor design. This is a nationwide problem with many consumer electronic products. Again, If your neighbor is un-cooperative, I can only suggest you rely on the ARRL for advice and proceed accordingly.

They are in Newginton Connecticut. 860-594-0200 email: hq@arrl.org.

Good luck

Ed WB6SAT

Hi,

Try to get confirmation that the US Postal Money order was cashed. This takes some time.

If you can find the person real address, you can search public records most of the time for free
on the web. Find out if they own real estate, if so you can file a lien on the property.
No one will buy their land/home if a lien is on the property. This will get their attention and maybe
you will get you goods or money refunded.

Most of the time you can file a lien by mail and pay a small fee and this works.

regards.

Doug....If you are reading this, did you use a postal money order? I
was under the impression that you used a credit card through PayPal.
I don't understand why so many posts are referring to a postal M.O.

Source record: 33757

HI folks,

I was asking the other day about setting tones on a Kenwood tm-21
radio.

TO recap: wE have a Kenwood tm-221 with a damaged faceplate. WE also
have no manual for the radio.

We're trying to decipher how the heck to tell it what ctcss tone it's
supposed to hum on transmit.

Anybody have useful information for us?

Again, we were told to do something with a "F" button or function
button, which exists nowhere on that radio.

Anybody with a clue?????????

IF you don't know, butt out!!!

Source record: 33759

Dan,

I used a transmitting mica capacitor. 400 to 700pf is sufficient. I had several Sangamo's in my junk box. Most are rated 2500V to 7000V. Fair Radio usually sells them in you need one or two.
I have both the 4229 (kit form) and the 229B factory assembled tuner...they are exactly the same.

Go to the Kenwood USA site for amateur radio equipment. Look up
the instruction Manual for the TM 331. The .pdf manual will include
the TM-231, which I believe should have nearly identical functions to
your TM-221.

Source record: 33763

for starters this particular 756 only puts out 80 w's cw carrier and less on 10m.
receiver is not as sensitive as my 765 even with preamp 2 on. about 10 db light.
also using the same cables from 765 to the 756 acc1 jack for psk and sstv, receives fine, cannot transmit or modulate the modulater even at full volume but same cables work on my 765 and ft-990 so i rule out the interface cables. bum radio? anyone with similar experiences? would like to hear from you. i would hate to ask seller to buy back radio. i allways wanted to play with a 756 but not very pleased at this point. maybe needs a trip to icom? i don't have a service manual but maybe a rf or receiver gain pot out of adjustment? maybe the internal regulator that gives the radio circuits its 13.5 volts needs adjustment? this is a possibility because even at the highest settings the meter seems dim.is the power output pot internal other than the pwr control on front of radio?

Hello,

My brother and I live about 3.5 to 4 miles apart. We would like to purchase some radios that we could talk back and forth with good quality. I bought a pair of Cobra 2-way radios that are supposed to have a range of up to 5 miles. I can just barely hear him. We want the radios to also work when we are both indoors. I'd like to know what kind of equipment we would need to get a clear transmission over this distance. We live in the country, and it is relatively flat ground between us. I would appreciate any suggestions on the types of radios we would need without having to mount any external antennas. We aren't interested in spending a lot of money-less than $100 and would like to have hand-held equipment. This might not be possible, but I would appreciate any information.

Thank You,

Chad

nah ... common equipment
He could count on a manual being available.
And he was right, there seem to be several on-line alternatives.

I have for sale in excellent condition a Yaesu FT-1000D HF radio. It was bought new in Feb.93 and has the 6.0 firmware and from a non-smoker. The front face is perfect, no scratches, no dents and no lettering worn off. The top and bottom covers are perfect....I have the original manual and have the original inner and box along with the Yaesu hand microphone....I will take $2000 plus shipping....Email me if you have any questions..WZ1U Steve / Lakeville, Ma.

1200. FS: Kenwood TS-430S station

I have for sale a Kenwood TS-430s station that is in very good condition. Its an 8 out 10 from a non-smoker. The 430 comes with the original hand microphone and instruction manual. It also has the 1.8 ssb filter and the 500 Hz cw filter with a copy of the service manual. Also have the matching AT-250 automatic antenna tuner and the PS-430 external power supply with original manuals. The tuner comes with the remote cable and ac power cords. I do not have the original boxes for all 3 items. I will take $625 for the complete package plus shipping or will split it up, but the rig has to go first....If you have any questions email me for more info...WZ1U Steve / Lakeville, Ma.

Pictures upon request !

Wow, radio. Sure a lot of capital letters to
chastise someone based
on some pretty wild assumptions. I think they
call that
"assumes facts not in evidence".

Maybe they should check with local ham radio
operators
to see what's reasonable on what frequencies based
on the
local terrain. Maybe even get a field trial with
some 2M
handhelds.

It would help to be as accurate as possible. For
example,
you live about 3.5 to 4 miles apart???? And you
want 5 mile range.
Unless you live in
a mobile home, you probably live some fixed
distance apart that can be
known quite precisely. Since you're near the
practical range limit
for such devices, a half mile could be relevant.
The more accurate your request, the better answer
you'll get.

One think I'd like to try is the following.
Imagine building a 3 element vertical yagi.
Now, remove the driven element and replace it with
a handheld
FRS radio. Or maybe stick it at the focus of a
parabola.
The radio is not actually connected to an external
antenna???is it???
Maybe stick the whole shebang in the air and run
the microphone wire down the support.

Anybody now how the antenna rule applies in this
circumstance?

mike

Chad,

Get yourself a pair of 5 watt CB walkie talkies.. I think Radio Shack still sells them, if not, ebay has them all the time. These will get that range pretty easily, and you should get in under $100 from ebay (batteries not included).

I have for sale a very nice condition R-390A. Motorola manufacture, original meters and original top and bottom covers. Very nice cosmetic and operating condition. Local pickup in the Arlington, TX . I do not want to ship this nice receiver. Asking $650.00.

Thanks,
Michael

1208. help with Icom ic-756 (original model)

Newsgroup: rec.radio.amateur.equipment
Date: 2003-02-04 02:41:21 UTC
From: John Haberkern <jhabsNOSPAM@worldnet.att.net>
Message-ID: <lLF%9.31405$zF6.2186015@bgtnsc04-news.ops.worldnet.att.net>
Source record: 33788

for starters this particular 756 only puts out 80 w's cw carrier and less on 10m.
receiver is not as sensitive as my 765 even with preamp 2 on. about 10 db light.
also using the same cables from 765 to the 756 acc1 jack for psk and sstv, receives fine, cannot transmit or modulate the modulater even at full volume but same cables work on my 765 and ft-990 so i rule out the interface cables. bum radio? anyone with similar experiences? would like to hear from you. i would hate to ask seller to buy back radio. i allways wanted to play with a 756 but not very pleased at this point. maybe needs a trip to icom? i don't have a service manual but maybe a rf or receiver gain pot out of adjustment? maybe the internal regulator that gives the radio circuits its 13.5 volts needs adjustment? this is a possibility because even at the highest settings the meter seems dim.is the power output pot internal other than the pwr control on front of radio?

Couple good CB radios with outdoor whip antennas
should do the job just fine, unless there is a BIG hill
between you. Fairly low cost, you might even pick
up the radios at thrift stores ...

I am looking for some of the smaller knobs for the heathkit
SB-xxx series. I need them for an amplifier restore project.
Don't want any that are scratched or busted. Must be in
reasonable condition.

Please advise condition and price.

Thanks Tom

I am looking for a perforated top cover for the SB-220
amplifier for a restore project. I would like one in
better than average shape. I have one that I could trade
with you and pay some boot for a like new one.

Also looking for a new SB-220 case. Same condition
must be in very good shape. No dents etc. Can trade
mine for yours and pay boot.

Looking to restore one to like new shape.

Thanks for reading,

Tom

My Lost Users Manual has three pages on programming the TM-221A. Give me
your snail mail location and I'll mail them to you next time I get to
our copy shop.

To select PL tone:
press M. IN
press TONE
dial tone with tuning knob
press TONE

It ain't Gary, which should be obvious just by puzzling over why
someone would post a message so full of personal information.

Whether or not the information is real, it's some guy spoofing
Gary's email address. Check the headers, and compare a message
from the real Gary Coffman. The message does not originate
from the same ISP.

Plus, whoever did it posted the same info to another newsgroup,
and there Gary himself has commented.

If the ARRL even REMOTLY offers ANY SUPPORT
WHATSOEVER to this Orwellian proposal by K8AD
than it will signal the **DEATH KNELL** for ARRL.

Anyone (...and I mean anyone) who would lend their
support to this insane proposal is aiding totalitarian
style controls to the private ownership of a radio
transmitter.

I wonder if K8AD went to the "Soviet Gulag School" of
Ham Radio? The Govt. or anyone else has no damm
business AT ALL knowing what makes and models of radios
I may purchase or own G-DDAMMIT!

What the frig? Are we to now have HANDGUN STYLE
Registration Requirements for Ham Radio and CB Equipment???

IF THE ARRL GOES ALONG WITH THIS PROPOSAL -
IN ANY CAPACITY WHATSOEVER, YOU WILL SEE THE
BIGGEST ABANDONMENT OF ARRL MEMBERSHIP
SINCE THE INCENTIVE LICENSING DISASTER OF
THE 60's and 70's.

-----> Do not support or touch this proposal W1AW - unless you
want to go the way of the Spark Transmitter and Rotary Dial Telephone.

Was polishing motorcycle in driveway one day. Car drives up and couple get out. Look at motorcycle then fellow asks if peculiar antenna on roof is mine. I say "Yes." Out comes papers. "You have been served." Went to court with Order for judge to sign requiring Plaintiff to reimburse me for time off and costs of researching law at law library plus travel and meals and listed miscellaneous expenses. Judge signed, they balked. I said, "Pay up or I freeze all accounts and assets." The rep of company asked judge if I could do that. Judge answered in the affirmative. They paid.

It's so much fun when you know the law and they don't!

Talk about killing the messenger. The ARRL let you and everyone else
know what is being filed with the FCC. Their announcment in no way
indicated support. I would think you would be thanking the ARRL for
letting you know. I am sure that you have filed your comments with
the FCC concerning this issue. I suggest you send a thank you note
and contribution to the ARRL for keeping you informed. N4VOX

1226. Powering up Hf Rig using the Power Supply ... Ok?

Newsgroup: rec.radio.amateur.equipment
Date: 2003-02-04 17:12:37 UTC
From: sbynum@srsnetworks.net
Message-ID: <c5cddf24.0302040912.488dc201@posting.google.com>
Source record: 33857

Ive always in the back of my mind wondered if powering up (turning on)the HF rig (in this case... IC 756 Pro II) using only the Astron 35a is safe and also will it use up the battery life stored for memories ect faster while no power at all is getting to the rig? I usually just leave the power supply on all (most) the time and just turn on the rig. Another reason i dont use just the power supply to switch on the rig is i fear any surge that may occur doing it this way.
I would love to hear from more experienced hams on this issue.
Steve

I would also tend to be conservative as you are by using the rig's
switch for on/off. However, if were not going to use it for a while,
for safety I would also shut down the PS.

When restarting, I would fire up the PS, wait a second, and then turn
on the rig.

Many PS it wouldn't matter, but to be sure I would avoid startup
surges this way.

Steve,

I've used a variety of solid-state rigs over the years, all of them powered by the same trusty ol' Astron RS-35M (which I got brand new in 1983). I turn on the P/S first, then turn on the rig. Never had any problems. I have occasionally left the rig's power switch on (accidentally) and switched on the P/S with the rig already on, and no damage has occurred. It must be kept in mind that virtually all solid-state HF rigs have DC power applied to the PA stage all the time, since making and installing an on/off switch that would handle that much current would be expensive and huge. Fortunately, final amp transistors are rugged enough to survive all but the biggest spikes.

Even leaving your P/S on all the time will not eliminate all spikes, since a spike on the power line could be reflected as a spike in the P/S output, if the pulse duration is short enough that the regulator doesn't catch it (it happens!).

Does this require an SSB HT or does it somehow switch from FM to SSB?

I think it may be legal below 220 to do that. And to answer the question
its FM thru the HT into 40m ssb. He sounds pretty good but a tad narrow
sounding on the audio but to be expected from 440 mhz

Others have commented on the power supply. That's what I do. Turn on the supply, let it stabilize for a couple of seconds, then turn on the radio. Don't worry about the Lithium battery if your rig has one. It doesn't get charged anyway, so whether the rig is on or off doesn't affect the battery life.

Trun on the PS first, then the radio, reverse order to shut down.
The battery for memories, will out last you. Doesn't matter if the PS is one
or off.

Hello, I was wondering if Somebody out there has a Kenwood KA-3500 Service manual and could help me out please, I have a KENWOOD MODEL - KA-3500 unit, and I am having a problem with it where in the sound is very bad, and I have managed to find out the cause of this problem - It is a BURNT OUT RESISTOR, and I do not know the value of this resistor to replace it, NOR DO I HAVE A SERVICE MANUAL, following is the location of the resistor - R52 on circuit board number - X07-1470-10(Main circuit board that has the 4 output transistors on it - hooked up to the heat sink, the resistor is located right near a 50V 220uf Capacitor - C35).
I desperately need your help please in finding out the value of this resistor, as I do not have a service manual for this unit.
I Thank you for your help, and for your time and very much appreciate your help.
thanks
Maria D.
(mariadolores12000@yahoo.ca)

P.S. I also need a kenwood part number for the LOUDNESS and TAPE MONITOR KNOBS Please
thanks

And yet another suggestion...

Your GMRS radios do legally require licensing in the U.S. I am not familar with those models, do they allow connecting an outside antenna? If they do, probably the cheapest route for you would be to put up good outside antennas. If there is no hill between you (either natural or "concrete jungle") then the range should be OK.

There are MANY options. Personally I think you will be happier with the audio quality of any FM option (like your GMRS) over any AM option (like CB). MURS is also FM (close to the ham radio 2m band) is easy, and of course getting your ham radio license opens up a lot more possiblities (requires passing a written test, multiple choice, usually about $15 fee good for 10 years then free renewals). Practice tests are free online at many sites.

And of course with Ham Radio one thinks of 5 miles as trivial,
500 miles as easy, and 5000 miles as fairly interesting :-)

Oh, ok. I know a local ham that uses this feature. I'm not sure what
he uses as an input to get onto HF, but he says it's pretty cool.

Looking to outfit my car with a mobile 2m(/70cm).

Doesn't have to be cosmetically nice, but should be in perfect working condition. The lower the price, the more attractive. I wouldn't mind an appropriate magmount antenna with it, if you have one to sell.

I will consider other brands/models but these two are the ones I'm currently looking at.

Thanks,

-Leo

> sure) question--can the "Car" control be used to limit SWR? That seems to
be
> the effect, but then, I'm basically operating a QRP rig then, right?

No . The only way to reduce the swr is to change something in the antenna, feedline, or insert a tuner in the line. What you are doing with the CAR is just reducing the power output . As you go down in power some swr meters will appear to show a lower swr. This is because the diodes in the meter concuct differantly at differant power levels, especially low levels. If you use a swr meter each tiem the power output changes you have to recalibrate it.

Why not.

As long as he's a ham, and licensed to use the bands he's on, and is IDing
properly.

Here are some excerpt from Part 97:

Sec. 97.3 Definitions.

(38) Remote control. The use of a control operator who indirectly
manipulates the operating adjustments in the station through a control
link to achieve compliance with the FCC Rules.

Sec. 97.109 Station control.

(c) When a station is being remotely controlled, the control
operator must be at the control point. Any station may be remotely
controlled.

1256. ISO HT w/large readout

My dad (W4ACL) wears tri-focals and has trouble seeing the small indicators on his Icom W32A. Not so much the frequency, but duplex set, tone, and other tiny indicators on the LCD screen.

We've discussed getting him another HT, but if we do I want him to have something with a screen that he can see well. For purposes of this discussion, any HT model old or new will be considered. If a discontinued model is best for his purposes, we'll look for one used.

Coverage of 440 MHz is desirable, but not absolutely required. Obviously we are not looking for the smallest HT either, but would prefer something approximately the same size as the W32A (not the tiniest of radios.)

Of course, we'll be looking for this at the next hamfest we attend, but I thought that someone here may have experienced this problem and have some suggestions.

I'd appreciate your input and experiences.

1257. Old receiver needs replacement knobs - Help!

Newsgroup: rec.radio.amateur.equipment
Date: 2003-02-05 16:36:36 UTC
From: will7370@yahoo.com
Message-ID: <e88e9b5a.0302050836.6e2ecd5d@posting.google.com>
Source record: 33887

I just picked up a couple of old multiband receivers (35+ years old), and one of them needs a few new knobs. I cannot go to the original manufacturer (Aircastle) because they are long out of business. I've checked Radio Shack and they do not have anything that will work. This receiver has the pot shafts recessed below the surface of the front panel, and so I need knobs whose backsides can insert into a hole on the panel and onto the shaft. The only ones that Radio Shack has are for pots that have shafts sticking up above the surface of the panel.

Can anyone make a recommendation for online knob sources, one that will allow you to purchase 3 or 4, and not require you to purchase in bulk quantities?

Any help or suggestions would be appreciated.

>to use that repeater.

Are you referring to the KA6VHC repeater, operated by Daniel Granda?

I think you might want to do a bit of additional research into this particular situation before you jump to conclusions - read some of the earlier enforcement letters related to this repeater. The situation is, I think, a bit more complex that you believe.

As I recall (and I may be mis-remembering the details), the primary issue in this case, and the cause of the original complaints to the FCC, was a dispute between Mr. Granda and the operators of two other (coordinated) repeaters in the area, over some ongoing interference between the repeaters.

The FCC has informed Mr. Granda that he bears the primary responsibility for resolving the interference problem, as his repeater is not currently coordinated on its frequency and the other two are. Mr. Granda has apparently claimed a sort of "grandfathered" primacy on his repeater's frequency, based on the fact that he's been using it for many years and was once coordinated on that frequency. The FCC has rejected his claim.

Reading between the lines, I infer that the operators of the other repeater(s) made some recordings of the transmissions by the KA6VHC repeater to demonstrate that it was interfering with their own repeaters. From the language in the earlier enforcement letters, it sounds to me as if the "obscene communications" and "deliberate interference" the FCC is concerned about might possibly have come from Mr. Granda himself (although this is not explicitly stated anywhere, and I could well be mistaken).

I don't see anything to indicate that it was users of Mr. Granda's repeater who complained to the FCC about cursing and jamming.

Well the "Car" control is just the carrier insertion. So it sets the power of your carrier. If you turn it down, both your power output and your SWR will drop. It is not intended to limit the SWR though. You really need an antenna tuner to match your antenna to your rig to control the SWR.

Thanks for the info. For some reason I need more than that. I found
a 4700pf 2500V unit and it works perfectly. I'm tuning a 140 foot
twin-lead fed dipole for 160 meters. Feedline must be just the right
length to require more capacitance.

Sounds like John Aschcroft is gettin' bored again. How did this
jackmeat get so much power, he wasn't elcted to office. Come to think
of it, neither was his boss.....What the F**K is Ashcroft doing,
just 'cause he got beat in the last election he ran in by a dead guy
doesn't mean he has the right to totally trash OUR Constitution and OUR
rights. "OUR" includes you..... Thank God we only have 2 more
years of this crap. Hopefully we'll survive it but I have my doubts.

HI, Folks,
Come out to the Richmond Frostfest, this Sunday at the "Show
Place", our club table will have the following stuff for sale to
benefit our repeater and public service activities plus move some of
the gear not needed by our members.

KENWOOD TS-520 Transceiver w/ MC-50 Desk Mic, AC Power Plug w/ Owner's
Manual & Service Manual
NATIONAL RAO-6 (NC-120), Receiver w/ Manual, recently recapped
Radio Shack 33-3001 Dynamic Microphone w/ Stand & cable
Astatic Model JT-30 Mic w/ 12' cable
Mic Base w/ 5' cable & PL6b Plug
Mic Connector w/ 5' Cable & PJ-068 Plug
Tripp-Lite PR-7b, 7 Amp Power Supply
Hand Mic w/ cable & plug
AEA PK232 TNC
AEA PK64 TNC
MFJ-1278 TNC
ACC Model RC850 Repeater Controller, w/ Manual
COLLINS KWM2 Transceiver
COLLINS Power Supply
Misc. Collins Manuals

Source record: 33719

I am always amazed at the lack of control on a lot of repeaters. One repeater here in Rochester went on the fritz and was transmitting noise and howling for 18 hours. They only had one "control operator" and he was out of town. One club member did know how to turn off the ID though so he "solved the problem" by turning off the cw id. Still permantlly keyed in transmit, just now doublely illegal since it was not id'ing for 15 hours.

Why can't a club find half a dozen operators agreeing to take a shift acting as control operators? In the case of the Rochester repeater, there were plenty of operators willing to do so but an "eqo" got in the way so only one person knew the control codes.

Now if you were to go up on the other Rochester repeater, N2HJD, and start cursing or acting the lid, you would find the repeater shut off instantly, the way it should be.

You're right, Dave.

Buried in
<http://www.arrl.org/news/enforcement_logs/2003/0124.html?nc=1> is the
following.

Dear Mr. Granda:
<snip legalese prelude>
Your Amateur station KA6VHC is under review by the Enforcement Bureau
for apparent violations of the Commission's rules, including obscene and
indecent communications, inadequate station control and deliberate
interference. This review is the subject of correspondence between you
and the Enforcement Bureau. You are hereby notified that, ...

The wording led me to perhaps wrongly conclude that Granda's problem was
users' "obscene and indecent communications" and "deliberate
interference" plus his inability or unwillingness to stop it. The
erronious assumption that other users had complained to the FCC was my
own. Sorry.

We may agree but censors do not. The complaint reads in part "Your Amateur station KA6VHC is under review by the Enforcement Bureau for apparent violations of the Commission's rules, including obscene and indecent communications, ..." However as AE6EO pointed out, the issue is more complex.

The R7 and R8 from Cushcraft seem to be good antennas for HF. I don't
think you'll really find a good all band HF/VHF/UHF antenna, but I am
not sure if you're interested in that or not. Check out eham.net for
reviews of antennas.

Morning Wayne,
You can go after him through his ISP, maybe the USPO and also the
FBI because of the Interstate Laws if you live out of state.
Put your notes together and call the FBI then email your notes to
them. You should be able to do most of it online.

Delivery conformation or SIGNATURE confirmation, there is a BIG
difference. Delivery confirmation means it showed up and the post
office of the receiver and was sent out to the address to be delivered, but
they do not have to physcially SIGN for the item.

Signature confirmation means they have to physically SIGN for
the item - only the receiver who is named on the package
is allowed to sign.

Boy, the world is getting more and more wicked each day!

When they mean by "two way" radio coms does that also include things like FRS and CB Radios? That's just ridicious. Maybe soon they will require people registering television sets.

Before you get your panties in a wad, it is not the government trying to
force registration.

It is a proposal for rule making submitted to FCC by a ham radio operator.

The chances of it being adopted are little and none.

Consider replacement car/vehicle "keyless entry" remotes.
Some (Audi and Porche) operate "near" 318 Mhz.

I purchased this radio used from HRO and have programmed the frequencies I want in memory channels 0 thru 3. Channels 4 thru 6 are set at frequency 50.000. I can I remove these or set the radio to skip these channels in the "Memory Scan" mode? Also can this model be upgraded to 100 watt version?
Thanks,
Ken KG4VAG

AM-6155/GRT-22 FAA Surplus Linear power amp, Specs: 225-400MHz, 50W out (conservative) 10W in, Eimac X651Z/8930 final, extensive metering, can be converted to 2m, 220 or 432, rack mount 7" high, 80 lbs, ITT (model 3212), Part of AN/GRT-22. This Amp uses Emiac X651Z/8930 in silver-plated cavity-drawer; 175-turn TUNE counter dial. Main chassis has solid-state power supply and buffer amp/mulitplier; panel meter monitors voltages. Requires 105/120/210/240 VAC 50-400 Hz and +20 V req 60 ma. +20 V keyed; 7x19x18.5, 80 lbs shipping weight. The HV Supply from AM-6154 is Loaded with GREAT parts to include a 1752V at 270ma transformer, 8HY 300ma choke, 100K ohm 95 watt resistor, 2x5mfd 3KVDC capacitor, & rectifier circuits card. Most hams use these amps as a 2m or 220 Mhz or 432 Mhz Linear. After conversion, the output power is approximately 400 watts. One ham has used a 4CX400A (available from Svetlana)to raise the output power to 450 Watts. Do a Google search of AM-6155 and you will find many references to conversion information. Used - Excellant Condition (NOT TESTED) but sold AS-IS.. Email if you have any questions. Buyer will pay shipping (approx 90 lbs) from zip 31088 and a packing charge of $20.00. I will ensure the item is packed to survive the trip! 73, Larry Keith KQ4BY

I hide behind an identity to protect myself from being spammed. I got sick
and tired of being spamming me so whenever they "farm" my email address they
can get a nice subscription to pornmail themselves.

At least I had the brains to think of that. Besides, if someone needs to
reply or get a hold of me they can do so through this forum. I do have
sympathy for someone who lost their money. I have had plenty of things
stolen in my life too, but sometimes it takes a little common sense. Would
you park your brand new Lexus in the downtown district with the doors
unlocked and keys in the ignition? I didn't think so. On a smaller scale,
would you send someone a $300 piece of equipment in the mail without any
knowledge of who, what, or thing they are? I didn't think so.

It doesn't mean I don't have sympathy, but sometimes it takes a little
common sense. FBI has bigger and better things to worry about than people
being ripped off from something that could have been prevented with a little
common sense. The government is not here to police our lives and actions,
if they were, you can gladly move to China.

The 817 is fine for portable caual operation, but I wouldn't recommend it for full time duty. Unless you have a considerable antenna system, you may want to opt for the new FT857. I couldn't do much with 5 watts, in the short periods of time I had to operate, and traded mine shortly after purchasing it. Great for listening, but make sure you purchase the optional CW or SSB filter depending on which mode you work most. Not a bad $1000 CDN HT!

Bullshit. I've seen that lame-ass excuse so many times I could puke.
I refuse to do business with anyone not using their real name because
they (you) obviously have something to hide. I've subscribed to this
newsgroup for a LOT of years using the exact same ID and I don't
get spammed, period. It's called a "SPAM FILTER". You might try it.

All these years I watch you phonies come and go. Meanwhile, the
rest of us use our real names.

Need to raise money to buy a new Icom R75 :). Have a Drake SW2 with Kiwa filter mod, Drake ps, manual, Drake remote. Cosmetically very good. It's a nice radio, but tuning by the encoder has a slight problem. The radio works great. Will ship CONUS for $275 with money back guarantee less shipping.

No, if anything they would like as many people to park
themselves in front of the Great Pacifier Tube for as long
and as often as possible. Or more accurately, go to work,
come home and be pacified, and simultaneously stimulated as
a consumer to buy things to be a useful economic widget.

While actively talking with someone, some naughty subversive
thought might be unleashed. We must not have that! Approved
drivel, entertainment, and commercial messages only, please!
;)

So licenses for anything that might make a person more
involved and active, and incentives for anything that makes
you passive, lazy, content, and manipulatable. That's why
TV is still free. :)

I flew through Canada and the US recently, and took along my FT-50. I hand carried it and showed the security that it indeed worked. Let them hear some static, and changed frequency. Of course I took my license along also. I had more troubles with my cameras. It shouldn't be a problem for you.

I have acquired too many DMM's, I am selling the following. Both units in great condition, photos upon request. I will accept major Credit Cards or PAYPAL.

1 - Fluke 73 III DMM - w/ Fluke leads and yellow bump case - $100
1 - Fluke Ammeter - T5-600, DMM / Autoranging with non-contact ammeter - $75
Photos upon request. both in perfect condition and like new.

1353. FA:2 GE PROGLINE 2 METER TRANSCEIVERS WITH CHANNELIZER PLUS-EXCELLENT

Newsgroup: rec.radio.amateur.equipment
Date: 2003-02-07 05:04:10 UTC
From: Don Pelrine <dpelrine@c4.net>
Message-ID: <3e4325ac.0@paperboy.c4.net>
Source record: 33680

2 GE PROGLINE 2 METER TRANSCEIVERS WITH CHANNELIZER PLUS-EXCELLENT-------Two vintage GE Progline 2 meter transceivers. One Transciever has an AC Power Supply with a front GE front Control unit with the transmitter and receiver and also has been modified to use a GLB 400B Channelizer which allows you to operate the complete 2 meter band in 5KC steps without having to install the GE Oven Crystals each time you change frequencies on the band. The Channelizer synthezizes the frequencies and and acts like a VFO for both the transmitter and the receiver. The Chanenelizer was bought new for $180.00. The GE Transceiver is all vacuum tubes and the power supply is fused and operates from 115VAC with standard ac cord and plug. I have unlocked the case (2 keys included) and inspected the units and all are fine. The 3 units inside the case are labeled "Transmitter 4ET20A2, Receiver 4ER25CA, Power Supply 4EP2MI. There are also a spare transmitter and receiver that may be used for operation or parts. The Transmitter is labeled 4ET21A2 and the receiver chassis 4ER215B2. The sets installed operate at 30 watts and the spare set would provide up to 50 watts output. All the GE Prog Line documentation is complete for operation, specs. and servicing, update modifications etc. Same with the GLB400B Channelizer. Incuded is a GE P/T Mike that was made by Shure Brother's Model EM21A with heavy spiral cord and 4 prong Amphenol plug that inserts and locks into the bottom of the GE Control Unit of the transceiver. Also there is a complete antenna system 5/8 wavelength mounted on a strong magnetic base. Comes with 2 GE Speakers. All cabling is included. These vintage units were used by the Western Electric Company in their vehicles for mobile communications with Oven Crystals. I obtained the transceivers from a retired AT&T/WESTERN ELECTRIC/NYT transmission engineer. He is 97 years old and was with the bell system for 47 years. He is still and avid radio ham and operated this 2 meter rig equipment from his home and his family auto. the total weight for the rig including all I have mentioned above is 47 pounds(the documentation is 3 pounds). There are also some spare tubes. The second GE Prog Line is an ERG56TA566 ET-4A ER-48A black rugged metal transceiver for mobile operation with all the cabling/connectors and GE Volume -Monitor contol unit that uses transistors and just a few vacuum tubes. Comes with a couple of antenna bumper mounts and springs with all the hardware for vehicle mounting and installation . All GE operatioal, technical , and installation documentation is complete. I have also opened this unit--has lock but has been disabled and found all in order and clean. There are 24 GE Oven Crystals for 2 meter operation all in excellent condition. All this gear weighs an additional 46 pounds. We are talking real boatanchor here. Both Tranceivers are excellent specimens. Would have to send all in 2 separate shipments. Estimate each package at 50 pounds.
On auction at eBay--veiw the many pictures at:

I'm considering aquiring either a DX70 or DX77. I've looked at the Alinco web site so I know their specs and features, and I've read the reviews on eHam.net so I know that most users are satisfied. I'd like opinions and/or experiences from owners about any known problems and how well warranty/service problems are handled. Good or bad?

Also, has anyone had the "factory authorized service" do the "mars mod" and what did they charge?....and/or can it be easily done by owner? Thanks.

Hello everyone,

I want to change the relay that is inside my HF, IC-730. This relay has the following information ontop of it : 12v 2083 and also it says SR-202 SANWA.

This is the relay that "changes" from transmit to recieve and recieve to transmit when you press the ptt...

Anyone out there changed it by yourelf ? How to i remove this relay from the HF ?

Please advice here or using AX.25 packet: sv2evs@sv2dxc.tsl.grc.eu

Source record: 33691

Hello,

Thank You for reading my message, and please excuse my intrusion into your usergroup. I was looking for the best way to get this information to an audience that may be interested in what I am offering. I have just opened a new section of my website - www.10-7.com - called the "Midland Radio Closeout Store" (http://www.10-7.com/copshop/midland/midlandcloseoutstore.htm). In it, I have the lowest prices you will find anywhere on the Internet on select Midland Radio Products (I personally searched the web for other places selling the same items and beat their prices).

I will not bore you with some sales pitch, or a bunch of taglines. I feel that if you take a look at the store, my prices will speak for themselves. I will mention one special in particular... The "G-11 Value Pack" is one of the best bargains I'm offering. You get 2 15-Channel 2-Watt GMRS Radios, Rechargeable Batteries, Belt Clips, Wrist Straps, and a Dual Unit Drop in Desk Charger for $79.95. There are other sites that are selling just the radios - no batteries or chargers - for the same price.

So, please take a look and pass the word. Most of the items are only available in limited quantities.

A quick word about my website. "10-7.com" is one of the most popular Law Enforcement websites on the Internet. Started in April of 2001, it now receives over 100,000 visitors/month. As the site grew, so did the costs of running the site. In the last 6 months, my hosting costs have risen over 2000%. The site now uses more bandwidth in one day than most sites use in one year (my biggest day was just over 16 Gigs of bandwidth). My site contains NO paid advertising or pop-ups. In November 2002, I opened up a "Cop Shop" to raise money to offset the costs of running the site. Just this month (Feb, 2003), I was able to move the site to a dedicated server. I invite all members of Law Enforcement to check out the website, and enjoy the movies, games, and join the Law Enforcement Forum.

Main Website - http://www.10-7.com
Cop Shop - http://www.10-7.com/copshop/copshop.htm
Midland Radio Closeout Store - http://www.10-7.com/copshop/midland/midlandcloseoutstore.htm
--
Thank You,
Chris Wipperman

D2T doesn't seem to fit either "affordability" or "restricted space"
criteria.

Under $200 would be great and zoning laws require much less "conspicuous".
What else is there?

Max,

Not sure how tough the Canadian screeners are gonna be,
but here in the States, it isn't very tough, or at least
it wasn't a few months ago.

In August of 2002, I carried my complete Yaesu FT-817
portable station with me on a trip from DFW to PHL. The
station travels in a small camcorder bag, and includes
the rig, a Z-11 tuner, power supply, boom mic/headset,
spools of hookup wire for an antenna and counterpoise,
interconnect cables, memory keyer, paddles, logbook,
pen, a couple of small screwdrivers, and so on. In
other words, it is a COMPLETE station. I just set the
bag on the XRay machine belt, let 'em do their thing,
and they never even asked me to open the bag! That was
in BOTH directions of the trip, at DFW and PHL airports.
Of course, YMMV. As the others have said, be prepared
to turn the radio on and demo it, and have a copy of
your license readily available. I suspect that if you
leave the radio in your hand-carry bag and let them run
it through the XRay machine, they probably won't ask.

Enjoy Orlando. Lots of things to do there! If you're
into vintage warplanes, drive out to Kissimmee and see
Kermit Weeks' excellent warbird collection.

If it works like the RCI-2950 you can't remove them or skip them.
What you can do is reprogram the rest of them for the same 4 that
you have in 0-3 that way it will scan each one twice each cycle. I
can't help you on the upgrading to 100 watts question.

Rich,

I am owner of my second DX70TH and have no bad experiences with either radio. Aside from the noise blanker issues there really hasn't been anything to complain about. I use mine with an Astatic mobile D104 mic and the audio sounds great. I have recently ordered some replacement parts (knobs, panel etc) through their parts depot ATOC in Ohio and received great service. As for the "mars mod" I performed it on both of mine with no problems at all. Use a well lit magnified work area and a fine point 15 watt soldering iron and it is a breeze.

I purchased an Alinco 570 a number of years ago from a local dealer. The radio had been sent back to the factory for a problem which had supposedly been repaired.

When I got it, it was sold with a new warranty. The problem was NOT corrected, so I took it back to the dealer. The dealer sent it back. 6 weeks later it was returned. The problem was NOT corrected. This was repeated 5 or 6 times, with the last time they sent it back, the display just showed a bunch of jumbled characters. Each time I returned the radio, it was gone for 6 weeks. 1 week to ship it from the East Coast to the West Coast. Sat on their bench for 4 weeks and one week to return it. Finally, they just gave me a brand new radio which worked fine.

The guy at the local shop said it was difficult to find someone who could speak fluent English.

Icom service has been fast and they corrected the problem whenever I needed it.

> acting as control operators? ....

You tell me Stephen. The reason as I see it is that too many people take repeaters and everything else for granted: as something their entitled to use just for being born. They're quick to complain is everything doesn't exactly suit them, but contribute some time and $$$? Not ME!

But each is a unique situation. I put $1000 into a used repeater then many hours into getting it coordinated then getting it to work on the assigned frequencies; this to fill in "black holes" for my county ARES group - which barely comprises a half dozen members. I'd love to leave it up 24/7, but cannot for lack of *trustworthy* control operators. This isn't a power trip, it's paranoia. I'm the one FCC sends a nastygram if anything goes bad. One volunteer's packet station jammed the local ARES freq during two weather alerts - not one, two - and for hours! Would you trust him to keep you out of dutch with FCC? Hardly, but if you ask him I'm on a power trip.

I'm trying to solve that problem by linking with other repeaters in the "listening area" so we can share control duties but that's going to cost a whole lot more time and $$$, and for what: so freeloaders can cuss or jam each other and get us into trouble?

Other repeater owners don't even have that option. Sigh ...

My advise is to support the repeater(s) you use, with both time and money. Lots of it! Jeeze, if the group I'm joining up with had an extra $1000, or better yet $5000, and some more good people .... (c: Also, if you know of abusers - people who cuss or jam - don't complain to FCC and get the owner in trouble; throw a big blanket party for the trouble makers!

One of the Eham reviews may be mine.

The 77-T is not the same as the 77Q
The 77t has the Keyer and the CW IF filter. I used the radio for 3 years, great rig. It will NOT do cross mode contacts. The SPLIT is easy to use and I worked many DX stations using it. It is also easy to "unsplit" it accidently which I learned the hard way not to do.

It recieves (or can be caused to recieve) over a wider range than published. They don't publish it because it gets less sensitive the further outside the published specs you go.

I did NOT do the Mars Mod, but it is easy, similar to the comments the guy with the 70 left you.

It has an "undocumented" (but it is on the schematic) Jumper to allow the use of electret mics. It needs a high level input similar to an Icom. I would expect any mic made for an Icom to work on it if you put in JMP1.

I flew across the Canada / US border many times. (Note that I have not done this in 12 years.)

Canadian screeners would NOT LET A RADIO ON THE PLANE UNLESS CHECKED IN BAGGAGE. I checked at the airline counter, and they verified that this was appropriate. The rational was that it could be used or threatened as a trigger for a bomb in the baggage.

There were times I had to check my carry on bags so I could get the radio back to the U.S.

In those days I never had any trouble with a U.S. screener. Perhaps with the prevelance of Cell phones things are different now.

When My radios were new, I would go to our customs desk before leaving the U.S. and they would give me a reciept for the radio to show it had been in the U.S. so that on returning to the U.S. I would not have to prove that the import taxes had been paid on a forien made radio.

Have a nice trip.

There are sites connected with the vanity call idea, where you could
look up the call of a SK relative and claim it if no one has been
assigned it in the mean time.

Knowing the rough time frame they were last licensed would help, as
would some geographic info and full name. It may not be online, but
ask around for someone who has a call book from the appropriate year.

Happy trails,

Good for you Jon ... me on the other hand replied back
to an adult spammer on one of the rec.radio's after he/she/it
put in a link for a bestiality site. I replied that he/she/it was
the sickest fuck in the world and to keep it out of the newsgroups.

my mail box was filled to capacity every single day until I changed
providers. the sick bastard sent a 10 chapter book on the correct
way "to do" an animal. my wife about died when she opened the mail.
the sick pup was located and prosecuted. i can picture this asshole
sitting in his cell planning his vengeance.

since then .... i'm stealth. it's not a lame ass excuse ... it's a
cloaking device for the digital world.

This is not really ham related but I'm a ham and there are probably folks reading this who can help.....

I have a leather case for my diabetes meter, much similar to the cases I see for HT's. Now, after 3 years, the case is showing some wear. I've requested a new one and Bayer is sending me one for free (nice cust. supp, bayer) but I know it's going to be a stiff as steel when it gets here.

Is there anything I can do to soften the leather quickly? My old case is popping seams and the button is wearing through but it's still as stiff as brass sheet stock.

As an alternate, doeas anyone know of a leather newsgroup where I might get more info?

Hmm, the name Richard Jewel comes to mind. Remember the security guard in Atlanta who discovered a bomb and warned people away, probably saving a dozen lives. The FBI destroyed the man in an attempt to convict him of placing the bomb. They got him fired from his job, destroyed his reputation in the community by releasing false stories about him, and even tried to get his family to turn on him. The real bomber is still on the loose and went on to bomb two more establishments while the FBI ignored him and went after the innocent.

And now we also have all the death row prisoners who have been released since the advent of DNA evidence. Yea, right, if you havent done anything wrong, then you have nothing to worry about. Now that is one ignorant statement!

Here may be some posts by the thief and one in particular about getting ripped off concerning a Grundig SAT 700. Perhaps more info will nail this thief. Notice how he names a business Act Electronics. Anyone know this business? They would probably know him. Notice how he calls himself Jeff and also Gabe in other posts. He has scammed under the names Jeff Graham and Gabrial Mariscal. He has offered in trade a Pro 43 and an Icom R75.

I wish I would have known that there is a repai alternative for Grundig sw radios other then Act Electronics. I sent them my Satelit-700 for repair last year. They repaired it and then supposedly by mistake, they sold it. They have offered me a Sat-500 for my Sat-700. I have refused and am still trying to get payed for my radio. It looks like I will have to go the legal route with this. Be verry carefull when sending any thing to them for repair.

I am on my third sat-700 from ACT Electronics. The first one did not have any AM or SW reception and very distorted fm reception. The second one was completely doa. Now my third one is missing two screws from the cabinet and still has the distorted fm sound although the AM works. I have asked for a refund as i do not want the radio replaced a 4th time, and was refused since it is past the thirty day return period. In short be very aware of buying any so called refurbed radios from these crooks.Search Result 3 From: Gabe (radiohawg99@hotmail.com)Subject: Radio Mods. I've used nothing but my real name since checking in here years ago. I do get spammed... I've tried the Spam filters in my set up to some degree of success. My ISP has a filter in place too which knocks out about 95% of it. But lately it seems a bit more is trickling through. I'm going to do some homework to see if I can filter it a bit more. Just my two cents......and opinion. Along those lines, if you have any suggestions on how to filter "better", I would be happy to hear them. I thought there was a "law" put in place against that? Maybe I'm imagining things. But then again, this is getting to be a lawless society anyway. Homeland security? Hell, we can't even defend ourselves from our own scum.

Im like you,, I've used nothing but my "real" name and "real email"
since I started on the internet back when AOL and a 2400baud modem was
king. Now I just set up my block senders list to block anything that comes
from "hotmail.com" or any of the other anonymous remailers. And I dont do
business with "most" people who do not use their real name and email. Any
spam or heckle I receive, I only get it once, cause they go on the blocked
senders list. If people want to carry on an intelligent discussion on something,,
fine but I'm not going to bother myself with a bunch of crap. If people insist
on using phony email returns and what not,, Im just not interested.

Jeff

I must be a moron because I can't remember this.

If I want to send a 700 Hz CW CQ at, say, 144.200, but am emulating CW
in SSB, what should I set my USB frequency to so that hams listening
for CW on 144.200 will hear my 700 Hz signal?

Mormons are told by their incorporated church head to maintain a minimum of year's supply of food for each household member in case of emergency when store shelves may be emptied and until home gardens and hunting/fishing may supply what stores no longer can. Where do you think gov't will go to seize all that food in emergency and charge head of household with "hoarding"? Colorado already has statute on books making it a crime to have more than six month's of food in house - it's called "hoarding". I expect many other states to follow unless this is challenged in the courts. Traitor FDR forced Congress in March, 1933 to make it a federal crime to have, demand or make just payment in gold coin and compelling people to surrender all privately-held coin not part of numismatic collection under penalty of ten years in federal prison for "hoarding."

A kinder and gentler - WHAT?

I own a good working FTC 1143 handi that I need to re-program. I have
not used this rig much and have moved three times in the last 8 years.
During one of ther moves I seem to have lost or mis-placed the
programming instruction sheet.
Please help if you can. I need to add Pl tones to a couple of the freq
pairs that are in there now so I can use thew local repeater on 440.
I have searched the web with no results.

Thanks for any help you can provide. E-mail or reply to thread.

Our primary Star Valley repeater [owner N7VGS whose repeater is at 8900' ASL and links west to Mtn Home, Idaho and southward to Henderson, Nev] is daily barraged with users who use no ID, broadcast music and jokes but apparently is too small potatoes and too isolated to get the attention of the FCC. I've offered to give PCBs and Construction/Operating Manuals for building Null Locators with ONE DEGREE repeatable accuracy to members of this and other repeater groups in Idaho in order to track down offenders. No response - no on likes it but again, no one wants to put out any effort to stop it. I even sent two sets of materials to the most outspoken hams only to have them return them to me with comment, "No time." Yet I've built up three sets over the years at a out-of-pocket cost of about 35.00 each and three evenings of about two hours each. Lent out all three and then have had users say, "Gee whiz, I'm sorry. I seem to have misplaced it." Board/Manual sets are available from The Happy Flyers whose International Commander was Hart Postlethwaite, WB6CQW of San Carlos, California if anyone wants to obtain the kit.

Well, I'm "not" saying this applies to all who use fake names and e-mails, but to me, if ya got enough balls to say it, you ought to have enough to sign your name to it (not hide). I've said things too which I stick by but could haunt me, but so be it. You live and learn. In my daily life and many positions I hold, I have to make a lot of tough choices and some don't sit well with many, but that's the breaks. I do what I must.....To make some of those decisions I have to have enough guts to do it and let it be known. I can't hide behind some curtain when making them. So, in my dealings on here, be it an opinion or buying and selling, I don't do it any differently. To me, honesty is a sign of maturity and responsibility. Both lack considerably in many when it comes down to the wire. I've seen people say things - recorded on tape- then lie out of it. So using a fake name and address - to me, isn't much better. Not if you intend for someone to take you at your word. Just my opinion....

The main reasons Mormons do this is they believe they should be
able to take care of themselves without begging for a handout.
They also are advised to have a years salary saved up. This is so
if they are out of work for any reason, they can survive without
having to rely on government handouts until they can find employment.

yeh they ruined that security guard guy, and i think eric rudolph did
that, and they tried for years to find him and have not as yet, and i
got a strange feeling they are doing the same thing to that white guy
who they blamed for that anthrax stuff.....the world's best police
force is just not living up to its billing.......j edgar must be
turning over in his grave.......of course he was rumored to be a cross
dresser but he did like to bust crooks and ran a tight ship........

You might also look for a product called the Betsi. This was a motherboard, originally intended for the Commodore Pet, which provided for S-100 expansion. The name was changed from Petsi to Betsi due to legal pressure from Commodore. IIRC, the KIM has the same parallel port as the Pet.

Yep. With one of these you can sit at the fishing hole and monitor your 2 meter FM via the speaker/PA . Great toys.

Kind of like how so many wackos claim the government uses mind control signals on the public... but if the government did have that capability, the one thing they'd do is make people believe they didn't have it.

Wow! Some people are REALLY out of touch....

Mind control....please see:

http://www.brojon.com/frontpage/bj040501.html

http://www.mindcontrolforums.com/resrc-hm.htm#mc

(Lots more on HAARP if you will look on www search engines!)

NEWS BRIEF: "United States Patent 5,159,703, Lowery, October 27, 1992
Silent Subliminal Presentation System, Inventors: Lowery, Oliver M. Appl.
No. 458339 Filed December 28, 1989.

"Abstract: A silent communications system in which nonaural carriers, in
the very low or very high audio frequency range or in the adjacent
ultrasonic frequency spectrum, are amplitude or frequency modulated with the
desired intelligence and propagated acoustically or vibrationally, for
inducement into the brain, typically through the use of loudspeakers,
earphones or piezoelectric transducers. The modulated carriers may be
transmitted directly in real time or may be conveniently recorded and stored
on mechanical, magnetic or optical media for delayed or repeated
transmission to the listener."

In the beginning of our Seminar 3 discussion of HAARP technology to control
the weather and to use weather as a weapon against us, we present the United
Nations' Treaty prohibiting such warfare and ask the rhetorical question:

If man cannot control the weather and use it as a weapon, why do you need an international treaty prohibiting such a weapon? Laws on the books in every state in the Union regulating cars prove the existence of cars; laws on the international books prohibiting weather warfare prove the ability to control the weather first and the ability to use weather as a weapon secondly.

Likewise, this patent to allow the inventor the exclusive right to create, and market, the technology to use certain frequencies for "inducement into the brain" prove the technology exists and is being used in one form or another for Mind Control. We suspect that the Illuminist government of ours currently is able to control the minds electromagnetically of people whom they have individually programmed, such as is the case in the school shootings, where the shooters had been previously heavily involved in the occult. However, our government is also moving full-speed ahead to the point where they can program minds enmasse prior to the time they want to actually begin controlling minds of entire populations. From the U.S. Patent website we can see that this inventor references scientific work done as far back as 1962 [Ibid.]. Therefore, we know that certain segments of science have been working steadily on this project, to control the minds of people.

Certainly, a "silent subliminal presentation system" utilizing electromagnetic radio which no one can see, hear, or smell would certainly hold the promise of controlling people's minds. Further, if none of the slaves knew that they were being manipulated, or how they were being manipulated , you have the potential of people living lives of slavery without realizing they were slaves! How delicious this prospect must be to the Illuminists who want so desperately to control the entire population of Mother Earth!

CONFIRMATION OF HAARP-TYPE TRANSMISSIONS USED IN SCHOOL SHOOTINGS

When we published NEWS1344, depicting the occult map of the six school shootings and then tied those shootings in with elevated levels of HAARP, we received some skeptical emails. People just could not, would not, or did no t want, to believe that the human mind could be so manipulated. And, I completely understand their reluctance to so believe; they did not want the terror of thinking that they could be controlled by leaders hostile to their well-being. People in the Nazi era similarly reacted to overwhelming evidence that Hitler was achieving dictatorial power and that he was deadly serious in his published threats [in Mein Kampf] to murder Jews, Christians, and others.

In the news group, NewsHawk, we have found corroborating evidence that this type of "Silent Sound" electromagnetic radio transmissions was culpable in at least one of the school shootings on this Satanic map. "This could well be going on in other regions of the U.S. as well. In fact, we at NewsHawk believe this is almost certainly the case and is very likely a factor in the unheard-of, unprecedented spate of mass murders which have been occurring throughout the U.S. in recent years. Highly respected author Alex Constantine, one the the preeminent researchers into the covert government's MANY 'mind-control' projects, specifically told NewsHawk that "Silent

Sound" transmissions were directly involved in the Jonesboro, Ark. mass school shootings in March, 1998."
[http://mercury.spaceports.com/~persewen/silent_sound.htm]

As we demonstrated in our article, above, on the Satanic School Shooting Map, highly elevated HAARP levels preceded most of the school shootings at least 3 1/2 to 13 hours prior to the beginning of the shootings. In the couple of shootings where the elevated levels were moderate, they were still elevated over the norm. Our webmaster viewed dozens of days to see what "normal" HAARP levels were, and discovered that the norm was for the signal to remain very flat horizontally. Even slight elevations of electromagnetic levels seemed to be able to produce a killing response in the person previously programmed.

We discovered, earlier this year as we were doing research into school shootings, that the shooters had one factor in common: they were participating in occult activities. In fact, most of them were so into the occult that they were feared by the rest of the student population. I have spoken with Christian author, Cisco Wheeler, who has co-authored several books on Mind Control with Fritz Springmeier, about this situation of the shooters previously being occultists. Cisco said that these shooters were not only into Satan worship themselves, but were victims of Generational Witchcraft. This term means that someone on either side of the family had been practicing witchcraft at some point in their genealogy. Maybe the culprit was Mom or Dad, or maybe the Grandparents, but each of these shooters were in Generational Witchcraft families. The Bible speaks to this issue when God says: "Thou shalt not bow down thyself to them [Satanic idols], nor serve them [witchcraft]: for I the LORD thy God am a jealous God, visiting the iniquity of the fathers upon the children unto the third and fourth generation of them that hate me. [Generational Witchcraft]" [Exodus 20:5]

CURRENT "EXPERIMENTATION" OF HAARP TYPE MIND CONTROL ON US!

In an effort to bring this whole subject a little closer to home, let us continue with this story, quoted above, on this microwave technology being used for Mind Control. This time, we move from the subject of certain individuals who might have been programmed [which is frightening enough] to entire populations being controlled [which is the stuff of horror shows]. http://mercury.spaceports.com/~persewen/silent_sound.htm

"NewsHawk is at this very moment investigating the use of "Silent Sound" transmissions and/or related EM/RF technology applied as a mass mood/mind control operation in Northern California: apparently intended to induce (violent) psychosis in targeted subjects. Targeted subjects, in this case, would include upwards of probably two million human beings!!"

Now let us make sure we get this information straight! Northern Californians, maybe as many as 2,000,000 people, are being silently bombarded with HAARP-type radio transmissions in exactly the same frequency as all human brains normally function, in an effort to perfect the capability to control the moods and/or minds of entire subjected

populations! If this scenario sounds like Science Fiction, or like Orwell's Brave New World , you are right on target. But, will these signals affect normal, ordinary people? Listen to more of this article:

"Experts we have spoken with believe that such mentally destabilizing signals would, naturally, most strongly and primarily affect individuals whose grip on mental/emotional equilibrium is less than solid; but EVERYONE within range of the transmissions would have distinctly negative reactions to some extent or other." [Emphasis was in the original]

While these "mentally destabilizing signals" would primarily affect people who are on the fringe of mental stability, everyone will feel somewhat mentally distressed. How many jobs in Northern California have been lost because people could not function anymore at the consistent level demanded by the employer? How many marriages have been ruined? How many careers have been ruined? How many teenagers, who are normally mentally and emotionally stressed anyway as they are going through these trying years, have been pushed overboard into real emotional or mental disturbance? We shall never know, and the Mass Media will never report a story like this.

Most people want to believe their elected and unelected officials have their best interests at heart. People will believe heinous acts by government officials might occur because of negligence, or selfishness, or by criminal acts; but, no one wants to believe their government officials have a specific agenda designed to destroy the lives of its citizens. To believe this is to stay up all night, every night, worrying about whether you might be the next target.

Normal, everyday Germans during the time of Adolf Hitler found themselves in the same quandary. Despite the fact that Adolf had publicly published Mein Kampf , in which he told the Jews and others he was going to murder them all, most Jews refused to believe. They found all sorts of excuses to not believe. When the killing began in earnest, and many non-Jewish Germans came face-to-face with some of the evidence, most of them refused to even consider the possibility that such murder on such a scale could ever take place. Even German citizens living in close proximity to the mass murder facilities refused to even believe that the smell of burning human flesh that was pouring forth from the chimneys 24 hours per day could possibly be human. They discounted the sightings of countless railcars going to these facilities full of people and leaving empty. Just before the end of the war, when the Allies broke the story of such atrocities, one German woman wrote to her friend that "someone should tell Adolf of these terrible things; he surely does not know"!

What is your reaction to these truths being shared with you now? Are you going to be a believer or are you going to bury your head in the sand deeper and deeper?

THE TIMING OF THE NORTHERN CALIFORNIA HAARP EXPERIMENTS

When were these experiments being carried out against the unsuspecting tax-paying citizens of Northern California? Let us return back to this

article. "This activity has been ongoing for most of 1999--with a pause of a couple of months or so during the summer (the perpetrators were obviously busy elsewhere!). These signals, primarily in the ULF (ultra-low-frequency) and ELF frequency range, have been recorded on a variety of equipment by several researchers and are in the process of being analyzed. During the many months these signals have been broadcast, they have been transmitting TWENTY-FOUR hours a day, EVERY DAY!!" [Emphasis was in the original]

One of the details of these experiments that need to be "analyzed" is the fact that, once a specific frequency for a certain type of brain function is proven, that frequency of transmission can be recorded on a computer. NewsHawk explains the science behind this insidious effort. "The purpose of all this high technology is to plot and display a moving cluster of periodic brainwave signals. The illustration shows an EEG display from a single individual, taken of left and right hemispheres simultaneously ... By using these computer-enhanced EEGs, scientists can identify and isolate the brain's low-amplitude 'emotion signature clusters', synthesize them and store them on another computer. In other words, by studying the subtle characteristic brainwave patterns that occur when a subject experiences a particular emotion, scientists have been able to identify the concomitant brainwave pattern and can now duplicate it . These clusters are then placed on the Silent Sound[TM] carrier frequencies and will silently trigger the occurrence of the same basic emotion in another human being!" [Ibid]

In layman's language, once these specific frequencies that causes a certain emotion or thought is precisely identified so exactly that a "fingerprint" of it can be made and stored on a computer, then this "fingerprint" can be sent out over other types of Mass Media! In other words, the frequency of brain wave that is proven to cause suicidal thoughts, for example, can be recorded by computer and then subliminally sent out via radio programs or TV shows! Or, if the government wants to cause huge numbers of people to suddenly go into depression, or into euphoria, they can emit the recorded signals via radio or TV and reach the entire population over a period of time!

This capability can even implant specific thoughts or commands into the minds of people. Huge numbers of people within a population can suddenly receive simultaneous thoughts or commands, causing many numbers of them to suddenly carry out the command. If the command is to "kill anyone", you suddenly might have large numbers of unexplained violent assaults by people who have never committed crimes before. Of course, the application to Biblical prophecy is direct and very serious for citizens living in the End Times. Listen:

"And I saw one of his heads as it were wounded to death; and his deadly wound was healed: and all the world wondered after the beast." [Revelation 13:3] Notice the word, "all" in this sentence. All the peoples of the world looked upon the Beast [Antichrist] with amazement and awe. The Bible then tells us exactly what "all " the peoples of the world were saying in unison.

"And they worshipped the dragon which gave power unto the beast: and they worshipped the beast, saying, Who is like unto the beast? who is able to

make war with him?" [Revelation 13:4]

"All" the peoples of the world will be simultaneously amazed and thrilled by Antichrist. This admiration will lead "all" the peoples of the world to "worship" the dragon [Satan] and his man, the beast [Antichrist]. As I have read the volumes of material on the New World Order Plan, I realized that their #1 goal was to successfully stage their New Age Christ -- Maitreya is his name. Their #1 goal after Maitreya is successfully staged is to lead all the peoples of the world into a worship of him, a worship of him as God. New Age author, David Spangler, stated this part of the Plan most succinctly.

"No one will enter the New World Order unless he or she will make a pledge to worship Lucifer. No one will enter the New Age unless he will take a Luciferian Initiation", David Spangler,Director of Planetary Initiative, United Nations. [

But, then, Spangler chills the soul of any Born Again Christian who knows their Bible generally and prophecy of Revelation specifically. "The light that reveals to us the presence of the Christ comes from Lucifer. He is the light-giver, he is aptly named the Morning Star because it is his light that heralds for man the dawn of a great consciousness. He stands as the Great Initiator, the one who hands the soul over to the Christ." [Ibid]

Did you get that last sentence? Lucifer is the "one who hands the soul over to the Christ" for worship. Wow! How much more bold and Biblical can you get? The New Age Plan of the New World Order Kingdom of Antichrist is to so prepare mankind through the workings of Lucifer as the "Great Initiator" so that he can hand each soul of each person over to Antichrist. Isn't this just what prophecy declares?

"If any man worship the beast and his image, and receive his mark in his forehead, or in his hand, The same shall drink of the wine of the wrath of God, which is poured out without mixture into the cup of his indignation; and he shall be tormented with fire and brimstone in the presence of the holy angels, and in the presence of the Lamb: And the smoke of their torment ascendeth up for ever and ever: and they have no rest day nor night, who worship the beast and his image, and whosoever receiveth the mark of his name." [Revelation 14:9-11]

"And the first [Angel] went, and poured out his vial upon the earth; and there fell a noisome and grievous sore upon the men which had the mark of the beast, and upon them which worshipped his image." [Revelation 16:2]

"And the fifth angel poured out his vial upon the seat of the beast; and his kingdom was full of darkness; and they gnawed their tongues for pain, And blasphemed the God of heaven because of their pains and their sores, and repented not of their deeds." [Revelation 16:10-11] We can see here that God considers all people who have had their souls delivered to The Christ [Antichrist] as being of "his kingdom", and they are all brought into Divine Judgment.

Conversely, we see the reward God heaps on those who refuse to follow the Antichrist. "... I saw the souls of them that were beheaded for the witness of Jesus, and for the word of God, and which had not worshipped the beast, neither his image, neither had received his mark upon their foreheads, or in their hands; and they lived and reigned with Christ a thousand years." [Revelation 20:4]

CONCLUSION

We must conclude that, if Antichrist has the capability to condition entire populations and to trigger the response they wish on most of the people, the fact that significant numbers of people refuse to give in to this efficient Mind Control must mean that God is Divinely protecting His own. We see huge numbers of people being saved in the 7-year Tribulation Period, and we see those people getting specific rewards for just such resistance. Therefore, God has to be protecting His own people.

At the conclusion of NEWS1344, concerning the occult map of the USA being used in the school shootings, we presented three Scriptures promising that God does "seal" His own people from Satan. Let us look now at Psalm 91 for other such reassurances.

Read carefully verses 1 and 2, for the promises God gives below are reserved for someone who carefully and daily fulfills the conditions in these two verses. These promises are reserved for someone who "dwells" in the "secret place of the Most High", who depends solely on the power of the Lord for protection.

"Surely he shall deliver thee from the snare of the fowler, and from the noisome [deadly] pestilence." [Verse 3] Notice the firm promise word, "shall", not "might" or "maybe", but "shall".

"Thou shalt not be afraid for the terror by night; nor for the arrow that flieth by day; Nor for the pestilence that walketh in darkness; nor for the destruction that wasteth at noonday." [Verses 5-6] We are instructed not to be afraid of anything the enemy of our souls -- Satan -- can throw our way, including the most powerful Illuminist Witchcraft in the world, or their high technology.

"A thousand shall fall at thy side, and ten thousand at thy right hand; but it shall not come nigh thee. Only with thine eyes shalt thou behold and see the reward of the wicked." A thousand people may fall at our side, and ten thousand may fall at our right side, but the true believer in Jesus Christ shall not be affected.

"Because you have made the Lord your refuge, and the Most High your dwelling place, there shall no evil befall you, nor any plague or calamity come near your tent. For He will give His angels special charge over you to accompany and defend and preserve you in all your ways of obedience and service. They shall bear you up on their hands, lest you cast your foot against a stone. You shall tread upon the lion and the adder; the young lion and the serpent shall you trample underfoot." [Psalm 91:9-13, Parallel Bible, KJV/Amplified Bible Commentary].

God will prevent His people from falling prey to these insidious technological breakthroughs. Make no mistake about the fact that Satan is revealing these secrets to massive Mind Control just as fast as God allows him to reveal them. But, this "calamity shall not come near you", God promises.

With King David, "I give myself unto prayer." [Psalm 109:4]

Truly, the sudden advent of population-wide Mind Control in the hands of the Satanic Illuminati is one more sign of the End of the Age. Are you spiritually ready? Is your family? Are you adequately protecting your loved ones? This is the reason for this ministry, to enable you to first understand the peril facing you, and then help you develop strategies to warn and protect your loved ones. Once you have been thoroughly trained, you can also use your knowledge as a means to open the door of discussion with an unsaved person. I have been able to use it many times, and have seen people come to Jesus Christ as a result. These perilous times are also a time when we can reach many souls for Jesus Christ, making an eternal difference.

If you have accepted Jesus Christ as your personal Savior, but have been very lukewarm in your spiritual walk with Him, you need to immediately ask Him for forgiveness and for renewal. He will instantly forgive you, and fill your heart with the joy of the Holy Spirit. Then, you need to begin a daily walk of prayer and personal Bible Study.

If you have never accepted Jesus Christ as Savior, but have come to realize His reality and the approaching End of the Age, and want to accept His FREE Gift of Eternal Life, you can also do so now, in the privacy of your home. Once you accept Him as Savior, you are spiritually Born Again, and are as assured of Heaven as if you were already there. Then, you can rest assured that the Kingdom of Antichrist will not touch you spiritually.

If you would like to become Born Again, turn to our Salvation Page now.

We hope you have been blessed by this ministry, which seeks to educate and warn people, so that they can see the coming New World Order -- Kingdom of Antichrist -- in their daily news.

Finally, we would love to hear from you.

You can contact us by mail or email.

God bless you.

I also use my name and real email address. Get about 5 pieces of spam a day and hit the del key on them. When someone asks a question that is best answered direct such as a schematic and I go to the trouble of looking it up and scanning it in and it gets bounced by a bad email address I do not send it again.

Yea, some guy 'claims' to have degrees in mechanical and
electrical engineering, 'claims' to have been a licensed radio
engineer and computer system analyst, 'claims' to have worked for
NASA, 'claims' this and 'claims' that. Just because he makes all
these claims and put it on a web site does not mean you have to be
stupid enough to believe it.

Hello! Am still trying to figure out what to buy. I am thinking the Yaesu FT-817, as I have antenna restrictions, limited space, and limited time on the air. Here is what I will be doing: Mainly local 2 mtr repeater work, messing around on 6 and 70cm (I will have a tri-band antenna up on roof) and for HF, I only listen to some hams and general Shortwave stuff (will use 70' random wire). Anyway, any thoughts good or bad on this radio? How is the receive for general coverage HF? Thanks in advance!

It that type of attitude that has
caused so much problems. Yes, you
have rights. The problem is that
people like you abuse those rights.
Every right has assumed responsibilities.

In the old days we did not have to use
government, the police or the courts.
We took assholes and non conformists
out and lynched them.

Ashcroft is a member of the Assemblies
of God, as is Pat Robertson and Adm.
Vern Clark (Navy CNO). The AG church is
one of the first churches to stand for
freedom.

The reason that we are in this mess in
the first place is that people like you
elected Clinton and other liberals. It
is the democrats who are the root of all
evil in America. They have become the
party of the well educated and the powerful.
It is now the party of the yuppies, not the
working man.

I have a friend who works at the HAARP transmitter site in Alaska.
He loves all these whacked conspiracy theories, but he points out
something nobody who perpetuates these ridiculous theories will
admit, the HAARP site is open to the public. You can go see for
yourself what they are doing. If they were doing one tenth of the
crap the whackos claim, the place would be locked up tighter
than your daughter's chastity belt and M-16 toting guards ready to
drill you full of holes for even thinking about approaching the place.

I've had that happen often enough that I now just post to the group that I have additional information and if they would like me to email it to them, send me an email request. On one occasion though, I had someone send me an email requesting information and after I had worked about a half hour drawing a schematic and sending it, it bounced. The guy is lucky I didn't know where he lived.

I'm thinking about purchasing the Icom 746PRO. I have read some good
and bad comments about the radio . I wonder if anyone who has purchased
one would let me know what they think of the radio pro and con.
I'm very interested in learning about how good the receiver is in actual
use under crowded band conditons etc.
I wonder how well it works on shortwave and how good or bad the audio
is and I have heard about the auto antenna tuner starting and stopping
during transmit . Is there any way to shut down the auto antenna tuner
as I plan to use an out board tuner the mn 2700
thanks tim

That may be true of the church but is not true of either Ashcroft or Robertson. We should never ever under any circumstances have any individuals in this country -- citizen or not -- locked up without the ability to communicate with family or an attorney, or not be able to communicate with an attorney privately, or to be locked up without charges.

These are Constitutional rights: The right to legal Consul. The right to a speedy trial. Innocent until proven guilty. The right to know the charges against you.

We are a nation where the phrase "prove your innocence" was something only the grossly ignorant would say.

We were once a nation where one could speak to your attorney without being listened in on.

We were a nation where anyone on our soil -- citizen or not -- was given equal protection under the law.

All those things are relics because of your "religious man" Ashcroft.

No, I have no love for clinton, but evil is the root of all evil in america. Ideology -- left or right -- is a convenient place to hide your evil. Clinton was dangerously irresponsible. Ashcroft is

dangerous. Clinton's sexual exploits won't scar america 100 years
from now, but Ashcroft just might.

something!

1480. What do you call this tool???

Newsgroup: rec.radio.amateur.equipment
Date: 2003-02-10 00:26:40 UTC
From: will7370@yahoo.com
Message-ID: <e88e9b5a.0302091626.32e50ca1@posting.google.com>
Source record: 33511

I've got a radio I need to work on, but the case is held together by a number of recessed screws that are not phillips nor hex heads. It's kind of a six pointed star on the head, and since some of the screws are recessed about 2 inches down a tube, I'm not sure how I'm going to get this thing open.

What's this tool called, and where can I get one? At Lowes? At Home Depot?

Any help of suggestions would be appreciated.

Regards,

Rob KC7BUM

Heck, tent evangelists in the late 1700s and 1800s knew how to use hymns to "brainwash" the attendees into "giving til it hurts" for those minds were open to suggestion while in music-induced trance. Documentation available on the web.

No a torque wrench is entirely different. The torque wrench is used to tighten a screw or bolt a specific amount rather than the random amount that you get from an ordinary wrench.

What the person asking the question needs is a special screwdriver for Torx head screws.

HAARP experiments
worry members of Russian Duma

By Rick Wiles
August 15, 2002
Copyright 2002 American Freedom News

Top members of Russia's parliament have expressed concern about the US Pentagon's plans to conduct military experiments using HAARP.

Members of the State Duma's international affairs and defense committees issued a statement last Thursday in Moscow. The legislators claim the United States HAARP program is developing "a qualitatively new type of weapon."

"Under the High Frequency Active Auroral Research Program (HAARP), the U.S. is creating new integral geophysical weapons that may influence the near-Earth medium with high-frequency radio waves," the State Duma said in an appeal circulated on Thursday. "The significance of this qualitative leap could be compared to the transition from cold steel to fire arms, or from conventional weapons to nuclear weapons. This new type of weapons differs from previous types in that the near-Earth medium becomes at once an object of direct influence and its component.

The committees reported that the U.S. is planning to test three facilities of this kind.

The Alaska site of HAARP is scheduled to conduct full-scale tests beginning in early 2003. The second testing site is in Greenland and the third site is in Norway.

"When these facilities are launched into space from Norway, Alaska and Greenland, a closed contour will be created with a truly fantastic integral potential for influencing the near-Earth medium," the State Duma said.

The Russian legislators say US scientific experiments, under the HAARP program, will create weapons capable of breaking radio communication lines and equipment installed on spaceships and rockets, provoke serious accidents

in electricity networks, oil and gas pipelines, and have a negative effect on the mental health of people populating entire regions of the planet.

The Duma deputies are demanding that an international ban be put on such large-scale geophysical experiments.

The appeal, signed by 90 deputies, has been sent to President Vladimir Putin, the United Nations and other international organizations, to the parliaments and leaders of the UN member countries, to the scientific public and to mass media outlets.

Among those who signed the appeal are Tatyana Astrakhankina, Nikolai Kharitonov, Yegor Ligachev, Sergei Reshulsky, Vitaly Sevastyanov, Viktor Cherepkov, Valentin Zorkaltsev and Alexei Mitrofanov.

Background of the HAARP Project
Prepared by Rosalie Bertell, Ph.D., GNSH

Military interest in space became intense during and after World War II because of the introduction of rocket science, the companion to nuclear technology. The early versions include the buzz bomb and guided missiles. They were thought of as potential carriers of both nuclear and conventional bombs.

Rocket technology and nuclear weapon technology developed simultaneously between 1945 and 1963. During this time of intensive atmospheric nuclear testing, explosions at various levels above and below the surface of the earth were attempted. Some of the now familiar descriptions of the earth's protective atmosphere, such as the existence of the Van Allen belts, were based on information gained through stratospheric and ionospheric experimentation.

The earth's atmosphere consists of the troposphere, from sea level to about 16 km above the earth's surface; the stratosphere (which contains the ozone level) which extends from about the 16 to 48 km above the earth; and the ionosphere which extends from 48 km to over 50,000 km above the surface of the earth.

The earth's protective atmosphere or "skin" extends beyond 3,200 km above sea level to the large magnetic fields, called the Van Allen Belts, which can capture the charged particles sprayed through the cosmos by the solar and galactic winds. These belts were discovered in 1958 during the first weeks of the operation of America's first satellite, Explorer I. They appear to contain charged particles trapped in the earth's gravity and magnetic fields. Primary galactic cosmic rays enter the solar system from interstellar space, and are made up of protons with energies above 100 MeV, extending up to astronomically high energies. They make up about 100 percent of the high energy rays. Solar rays are generally of lower energy, below 20 MeV (which is still high energy in earth terms). These high energy particles are affected by the earth's magnetic field and by geomagnetic latitude (distance above or below the geomagnetic equator). The flux density of low energy protons at the top of the atmosphere is normally greater at the poles than at the equator. The density also varies with solar activity, being at a minimum when solar flares are at a minimum.

The Van Allen belts capture charged particles (protons, electrons and alpha particles) and these spiral along the magnetic force lines toward the polar regions where the force lines converge. They are reflected back and forth between the magnetic force lines near the poles. The lower Van Allen Belt is about 7700 km above the earth's surface, and the outer Van Allen

Belt is about 51,500 km above the surface. According to the Encyclopedia Britannica, the Van Allen belts are most intense along the equator, and effectively absent over the poles. They dip to 400 km over the South Atlantic Ocean, and are about 1,000 km high over the Central Pacific Ocean. In the lower Van Allen Belt, the proton intensity is about 20,000 particles with energy above 30 MeV per second per square centimeter. Electrons reach a maximum energy of 1 MeV, and their intensity has a maximum of 100 million per second per square centimeter. In the outer Belt, proton energy averages only 1 MeV. For compar-ison, most charged particles discharged in a nuclear explosion range between 0.3 and 3 MeV, while diagnostic medical X-ray has peak voltage around 0.5 MeV.

Project Argus (1958)
Between August and September 1958, the US Navy exploded three fission type nuclear bombs 480 km above the South Atlantic Ocean, in the part of the lower Van Allen Belt closest to the earth's surface. In addition, two hydrogen bombs were detonated 160 km over Johnston Island in the Pacific. The military called this "the biggest scientific experiment ever undertaken." It was designed by the US Department of Defense and the US Atomic Energy Commission, under the code name Project Argus. The purpose appears to be to assess the impact of high altitude nuclear explosions on radio transmission and radar operations because of the electromagnetic pulse (EMP), and to increase understanding of the geomagnetic field and the behavior of the charged particles in it.

This gigantic experiment created new (inner) magnetic radiation belts encompassing almost the whole earth, and injected sufficient electrons and other energetic particles into the ionosphere to cause world wide effects. The electrons traveled back and forth along magnetic force lines, causing an artificial "aurora" when striking the atmosphere near the North Pole.

The US Military planned to create a "telecommunications shield" in the ionosphere, reported in 13-20 August 1961, Keesings Historisch Archief (K.H.A.). This shield would be created "in the ionosphere at 3,000 km height, by bringing into orbit 350,000 million copper needles, each 2-4 cm long [total weight 16 kg], forming a belt 10 km thick and 40 km wide, the needles spaced about 100 m apart." This was designed to replace the ionosphere "because telecommunications are impaired by magnetic storms and solar flares." The US planned to add to the number of copper needles if the experiment proved to be successful. This plan was strongly opposed by the Intentional Union of Astronomers.

Project Starfish (1962)
On July 9, 1962, the US began a further series of experiments with the ionosphere. From their description: "one kiloton device, at a height of 60 km and one megaton and one multi-megaton, at several hundred kilometers height" (K.H.A., 29 June 1962). These tests seriously disturbed the lower Van Allen Belt, substantially altering its shape and intensity. "In this experiment the inner Van Allen Belt will be practically destroyed for a period of time; particles from the Belt will be transported to the atmosphere. It is anticipated that the earth's magnetic field will be

disturbed over long distances for several hours, preventing radio communication. The explosion in the inner radiation belt will create an artificial dome of polar light that will be visible from Los Angeles" (K.H.A. 11 May 1962). A Fijian Sailor, present at this nuclear explosion, told me that the whole sky was on fire and he thought it would be the end of the world. This was the experiment which called forth the strong protest of the Queen's Astronomer, Sir Martin Ryle in the UK.

"The ionosphere [according to the under-standing at that time] that part of the atmosphere between 65 and 80 km and 280- 320 km height, will be disrupted by mechanical forces caused by the pressure wave following the explosion. At the same time, large quantities of ionizing radiation will be released, further ionizing the gaseous components of the atmosphere at this height. This ionization effect is strengthened by the radiation from the fission products... The lower Van Allen Belt, consisting of charged particles that move along the geomagnetic field lines... will similarly be disrupted. As a result of the explosion, this field will be locally destroyed, while countless new electrons will be introduced into the lower belt" (K.H.A. 11 May 1962). "On 19 July... NASA announced that as a consequence of the high altitude nuclear test of July 9, a new radiation belt had been formed, stretching from a height of about 400 km to 1600 km; it can be seen as a temporary extension of the lower Van Allen Belt" (K.H.A. 5 August 1962).

As explained in the Encyclopedia Britannica: "... Starfish made a much wider belt [than Project Argus] that extends from low altitude out past L=3 [i.e. three earth radiuses or about 13,000 km above the surface of the earth]." Later in 1962, the USSR undertook similar planetary experiments, creating three new radiation belts between 7,000 and 13,000 km above the earth. According to the Encyclopedia, the electron fluxes in the lower Van Allen Belt have changed markedly since the 1962 high- altitude nuclear explosions by the US and USSR, never returning to their former state. According to American scientists, it could take many hundreds of years for the Van Allen Belts to destabilize at their normal levels. (Research done by: Nigel Harle, Borderland Archives, Cortenbachstraat 32, 6136 CH Sittard, Netherlands.)

SPS: Solar Power Satellite Project (1968)
In 1968 the US military proposed Solar Powered Satellites in geostationary orbit some 40,000 km above the earth, which would intercept solar radiation using solar cells on satellites and transmit it via a microwave beam to receiving antennas, called rectennas, on earth. The US Congress mandated the Department of Energy and NASA to prepare an Environmental Impact Assessment on this project, to be completed by June 1980, and costing $25 Million. This project was designed to construct 60 Solar Powered Satellites over a thirty year period at a cost between $500 and $800 thousand million (in 1968 dollars), providing 100 percent of the US energy needs in the year 2025 at a cost of $3000 per kW. At that time, the project cost was two to three times larger than the whole Department of Energy budget, and the projected cost of the electricity was well above the cost of most conventional energy sources. The rectenna sites on earth were expected to take up to 145 square

kilometers of land, and would preclude habitation by any humans, animals or even vegetation. Each Satellite was to be the size of Manhattan Island.

Saturn V Rocket (1975)
Due to a malfunction, the Saturn V Rocket burned unusually high in the atmosphere, above 300 km. This burn produced "a large ionospheric hole" (Mendillo, M. Et al., Science p. 187, 343, 1975). The disturbance reduced the total electron content more than 60% over an area 1,000 km in radius, and lasted for several hours. It prevented all telecommunications over a large area of the Atlantic Ocean. The phenomenon was apparently caused by a reaction between the exhaust gases and ionospheric oxygen ions. The reaction emitted a 6300 A airglow. Between 1975 and 1981 NASA and the US Military began to design ways to test this new phenomena through deliberate experimentation with the ionosphere.

SPS Military Implications (1978)
Early review of the Solar Powered Satellite Project began in around 1978, and I was on the review panel. Although this was proposed as an energy program, it had significant military implications. One of the most significant, first pointed out by Michael J. Ozeroff, was the possibility of developing a satellite-borne beam weapon for anti-ballistic missile (ABM) use. The satellites were to be in geosynchronous orbits, each providing an excellent vantage point from which an entire hemisphere can be surveyed continuously. It was speculated that a high-energy laser beam could function as a thermal weapon to disable or destroy enemy missiles. There was some discussion of electron weapon beams, through the use of a laser beam to preheat a path for the following electron beam.

The SPS was also described as a psychological and anti- personnel weapon, which could be directed toward an enemy. If the main microwave beam was redirected away from its rectenna, toward enemy personnel, it could use an infrared radiation wave- length (invisible) as an anti-personnel weapon. It might also be possible to transmit high enough energy to ignite combustible materials. Laser beam power relays could be made from the SPS satellite to other satellites or platforms, for example aircraft, for military purposes. One application might be a laser powered turbofan engine which would receive the laser beam directly in its combustion chamber, producing the required high temperature gas for its cruising operation. This would allow unlimited on-station cruise time. As a psychological weapon, the SPS was capable of causing general panic

The SPS would be able to transmit power to remote military operations anywhere needed on earth. The manned platform of the SPS would provide surveillance and early warning capability, and ELF linkage to submarines. It would also provide the capability of jamming enemy communications. The potential for jamming and creating communications is significant. The SPS was also capable of causing physical changes in the ionosphere

President Carter approved the SPS Project and gave it a go- ahead, in spite of the reservation which many reviewers, myself included, expressed. Fortunately, it was so expensive, exceeding the entire Department of Energy budget, that funding was denied by the Congress. I approached the United

Nations Committee on Disarmament on this project, but was told that as long as the program was called Solar Energy by the United States, it could not be considered a weapons project. The same project resurfaced in the US under President Reagan. He moved it to the much larger budget of the Department of Defense and called it Star Wars. Since this is more recent history, I will not discuss the debate which raged over this phase of the plan.

By 1978, it was apparent to the US Military that communications in a nuclear hostile environment would not be possible using traditional methods of radio and television technology (Jane's Military Communications 1978). By 1982, GTE Sylvania (Needham Heights, Massachusetts) had developed a command control electronic sub-system for the US Air Force's Ground Launch Cruise Missiles (GLCM) that would enable military commanders to monitor and control the missile prior to launch both in hostile and non-hostile environments. The system contains six radio subsystems, created with visible light using a dark beam (not visible) and is resistant to the disruptions experienced by radio and television. Dark beams contribute to the formation of energetic plasma in the atmosphere. This plasma can become visible as smog or fog. Some has a different charge than the sun's energy, and accumulates in places where the sun's energy is absent, like the polar regions in the winter. When the polar spring occurs, the sun appears and repels this plasma, contributing to holes in the ozone layer. This military system is called: Ground Wave Emergency Network (GWEN). (See The SECOMII Communication System, by Wayne Olsen, SAND 78- 0391,Sandia Laboratories, Albuquerque, New Mexico, April 1978.) This innovative emergency radio system was apparently never implemented in Europe, and exists only in North America.

Orbit Maneuvering System (1981)
Part of the plan to build the SPS space platforms was the demand for reusable space shuttles, since they could not afford to keep discarding rockets. The NASA Spacelab 3 Mission of the Space Shuttle made, in 1981, "a series of passes over a network of five ground based observatories" in order to study what happened to the ionosphere when the Shuttle injected gases into it from the Orbit Maneuvering System (OMS). They discovered that they could "induce ionospheric holes" and began to experiment with holes made in the daytime, or at night over Millstone, Connecticut, and Arecibo, Puerto Rico. They experimented with the effects of "artificially induced ionospheric depletions on very low frequency wave lengths, on equatorial plasma instabilities, and on low frequency radio astronomical observations over Roberval, Quebec, Kwajelein, in the Marshall Islands and Hobart, Tasmania" (Advanced Space Research, Vo1.8, No. 1, 1988).

Innovative Shuttle Experiments (1985)
An innovative use of the Space Shuttle to perform space physics experiments in earth orbit was launched, using the OMS injections of gases to "cause a sudden depletion in the local plasma concentration, the creation of a so called ionospheric hole." This artificially induced plasma depletion can then be used to investigate other space phenomena, such as the growth of the plasma instabilities or the modification of radio propagation paths. The 47 second OMS burn of July 29, 1985, produced the largest and most long-lived ionospheric hole to date, dumping some 830 kg of exhaust into the

ionosphere at sunset. A 6 second, 68 km OMS release above Connecticut in August 1985, produced an airglow which covered over 400,000 square km.

During the 1980's, rocket launches globally numbered about 500 to 600 a year, peaking at 1500 in 1989. There were many more during the Gulf War. The Shuttle is the largest of the solid fuel rockets, with twin 45 meter boosters. All solid fuel rockets release large amounts of hydrochloric acid in their exhaust, each Shuttle flight injecting about 75 tons of ozone destroying chlorine into the stratosphere. Those launched since 1992 inject even more ozone-destroying chlorine, about 187 tons, into the stratosphere (which contains the ozone layer).

Mighty Oaks (1986)
In April 1986, just before the Chernobyl disaster, the US had a failed hydrogen test at the Nevada Test Site called Mighty Oaks. This test, conducted far underground, consisted of a hydrogen bomb explosion in one chamber, with a leaded steel door to the chamber, two meters thick, closing within milliseconds of the blast. The door was to allow only the first radioactive beam to escape into the "control room" in which expensive instrumentation was located. The radiation was to be captured as a weapon beam. The door failed to close as quickly as planned, causing the radioactive gases and debris to fill the control room, destroying millions of dollars worth of equipment. The experiment was part of a program to develop X-ray and particle beam weapons. The radioactive releases from Mighty Oaks were vented, under a "licensed venting" and were likely responsible for many of the North American nuclear fallout reports in May 1986, which were attributed to the Chernobyl disaster.

Desert Storm (1991)
According to Defense News, April 13 - 19, 1992, the US deployed an electromagnetic pulse weapon (EMP) in Desert Storm, designed to mimic the flash of electricity from a nuclear bomb. The Sandia National Laboratory had built a 23,000 square meter laboratory on the Kirkland Air Force Base, 1989, to house the Hermes II electron beam generator capable of producing 20 Trillion Watt pulses lasting 20 billionths to 25 billionths of a second. This X-ray simulator is called a Particle Beam Fusion Accelerator. A stream of electrons hitting a metal plate can produce a pulsed X-ray or gamma ray. Hermes II had produced electron beams since 1974. These devises were apparently tested during the Gulf War, although detailed information on them is sparse.

High Frequency Active Auroral Research Program, HAARP (1993)
The HAARP Program is jointly managed by the US Air Force and the US Navy, and is based in Gakona, Alaska. It is designed to "understand, simulate and control ionospheric processes that might alter the performance of communication and surveillance systems." The HAARP system intends to beam 3.6 Gigawatts of effective radiated power of high frequency radio energy into the ionosphere in order to:

a.. Generate extremely low frequency (ELF) waves for communicating with submerged submarines
b.. Conduct geophysical probes to identify and characterize natural

ionospheric processes so that techniques can be developed to mitigate or control them
c.. Generate ionospheric lenses to focus large amounts of high frequency energy, thus providing a means of triggering ionospheric processes that potentially could be exploited for Department of Defense purposes,
d.. Electron acceleration for infrared (IR) and other optical emissions which could be used to control radio wave propagation properties
e.. Generate geomagnetic field aligned ionization to control the reflection/scattering properties of radio waves,
f.. Use oblique heating to produce effects on radio wave propagation, thus broadening the potential military applications of ionospheric enhancement technology.
Poker Flat Rocket Launch (1968 to Present)
The Poker Flat Research Range is located about 50 km North of Fairbanks, Alaska, and it was established in 1968. It is operated by the Geophysical Institute with the University of Alaska Fairbanks, under NASA contract. About 250 major rocket launches have taken place from this site, and in 1994, a 16 meter long rocket was launched to help NASA "understand chemical reactions in the atmosphere associated with global climate change." Similar experiments, but using Chemical Release Modules (CRM), have been launched from Churchill, Manitoba. In 1980, Brian Whelan's "Project Waterhole" disrupted an aurora borealis, bringing it to a temporary halt. In February 1983, the chemical released into the ionosphere caused an aurora borealis over Churchill. In March 1989, two Black Brant X's and two Nike Orion rockets were launched over Canada, releasing barium at high altitudes and creating artificial clouds. These Churchill artificial clouds were observed from as far away as Los Alamos, New Mexico.

The US Navy has also been carrying on High Power Auroral Stimulation (HIPAS) research in Alaska. Through a series of wires and a 15 meter antenna, they have beamed high intensity signals into the upper atmosphere, generating a controlled disturbance in the ionosphere. As early as 1992, the Navy talked of creating 10 kilometer long antennas in the sky to generate extremely low frequency (ELF) waves needed for communicating with submarines. Another purpose of these experiments is to study the Aurora Borealis, called by some an outdoor plasma lab for studying the principles of fusion. Shuttle flights are now able to generate auroras with an electron beam. On November 10, 1991, and aurora borealis appeared in the Texas sky for the first time ever recorded, and it was seen by people as far away as Ohio and Utah, Nebraska and Missouri. The sky contained "Christmas colors" and various scientists were quick to blame it on solar activity. However, when pressed most would admit that the ionosphere must have been weakened at the time, so that the electrically charged particle hitting the earth's atmosphere created the highly visible light called airglow. These charged particles are normally pulled northwards by the earth's magnetic forces, to the magnetic north pole. The Northern Lights, as the aurora borealis is called, normally occurs in the vortex at the pole where the energetic particles, directed by the magnetic force lines, are directed.

Conclusions
It would be rash to assume that HAARP is an isolated experiment which

would not be expanded. It is related to fifty years of intensive and increasingly destructive programs to understand and control the upper atmosphere.

It would be rash not to associate HAARP with the space laboratory construction which is separately being planned by the United States. HAARP is an integral part of a long history of space research and development of a deliberate military nature.

The military implications of combining these projects is alarming.

Basic to this project is control of communications, both disruption and reliability in hostile environments. The power wielded by such control is obvious.

The ability of the HAARP / Spacelab/ rocket combination to deliver very large amount of energy, comparable to a nuclear bomb, anywhere on earth via laser and particle beams, are frightening.

The project is likely to be "sold" to the public as a space shield against incoming weapons, or, for the more gullible, a devise for repairing the ozone layer.

Well Tom,
I hate to tell you this BUT, remember the dog biscuit you ate the
other day with the little hard spot in it???? That was it, it hung up in
your gut and is transmitting to your brain their wishes.

YOU ARE UNDER THEIR CONTROL NOW.

If you will forward check to my address AFTER it clears I will tell
how to regain control of your self.

240 wall, 50 Hz, German Style plugs in MOST
If you go away from metropolitan areas, you'll encounter older-style Soviet
receptacles, but they are becoming rarer.

Where you going there? I've been there twice (Bratislava and Banska
Bystrica) and LOVED it. Definitely my favorite place in Europe.

HAMMARLUND, HALLICRAFTERS, AND OTHER BRAND TUBE TYPE RECEIVER OWNERS:
It is likely that your receiver has one or more 6BE6/5770 tubes. I have a number of brand new, in the factory box, 5750 electron tubes.
The 5750 is the JAN military low noise version of the 6BE6W and is totally interchangeable with 6BE6 and 6BE6W tubes, but better.

Price: $2.00 each, plus shipping. Save on shipping by ordering as many as you need at one time.

Try sort for a web page, like www.kenwood.
You may get lucky? This is a guess at a web site.
You could try a guess like www.trio
These are only part web site addresses, and as I say
a guess at that.

I bought an Azden PCS-3000 at a Hamfest and have ordered a manual, but until it arrives I wanted to ask if anyone can tell me what the three switch positions on the scan switch (upper right side of the rig) are for.
They are labled F, B, and V??

Thanks
Phil

As said earlier, Torx (tm) is most likely. Watch out for the security
style with a pin in the center, as you will need a different tool.
Absolutely nothing to do with torque wrenches (although you could
probably find a Torx torque wrench).

With a recessed fastener like you describe, an interchangable bit tool
will not help. Either the jackknife style assortment or separate
handled tools would be best. Pretty much any place that sells tools
will have these, but keep in mind there are several sizes.

The Bristol spline fasteners have more than six points and each spline
has a squared end. Quite rare these days, except on some older
equipment.

There is (was?) an outfit named NKX, that provided REBUILT channel elements for about, as i remember, 35 bucks a piece. a good place to look for old elements is on ebay. but, with the MSR-2000, this radio in new enuff that may not be many surplus to be had. another good place (and still in business) is International crystal- tho dont know their prices, but should be able to find their web site. also, kxn 1086/ 88 sounds like maybe used by other motorola radios, but been too long ago since was full-blown radioman--- jim nn7k

I'm not certian, but I beleive these are the same element used in the
Mitrek mobile, making them fairly common.

Well here's the header from from speech at a Convention of hypnotists in Vegas some years back. Any wonder rock 'n rollers & heavy metal bands concentrate on low freqs during their performances?

THE BATTLE FOR YOUR MIND

Persuasion & Brainwashing Techniques Being Used Today
by
Dick Sutphen

SUMMARY OF CONTENTS

* The birth of Brainwashing/Conversion in Christian Revivalism in 1735.

* The Pavlovian explanation of the three brain phases.
* Born again preachers: Step-by-step; how they conduct a revival and the
expected physiological results.
* The "voice roll" technique used by preachers, lawyers, and hypnotists.
* New trance-inducing churches.
* The six steps to conversion.
* The decognition process.
* Thought-stopping techniques.
* The "sell it by zealot" technique.
* True believers and mass movements.
* Persuasion techniques:
"Yes set," "Imbedded Commands," "Shock and Confusion," and the
"Interspersal Technique."
* Subliminal Programming
* Misuse of Programming
* Possession of Professional Observers
* Vibrato and ELF waves.
* Inducing trance with vibrational sound.
* The art of "possession" by charismatic effect.
* Non-detectable neurophone programming.
* The medium for mass takeover.
* The "only hope" technique for non-conversion.

FOREWORD

Hello, I'm Dick Sutphen and this is an expanded version of a talk I delivered at the World Congress of Professional Hypnotists Convention in Las Vegas, Nevada. Although the material carries a copyright to protect it from unlawful duplication for sale by for-profit enterprises, I

invite individuals to make copies and give them to friends and anyone else in a position to communicate this information.

...Three distinct and progressive states of "transmarginal inhibition" were identified by Pavlov. The first is the Equivalent Phase, in which the brain gives the same response to both strong and weak stimulii. The second is the Paradoxical Phase, in which the brain responds more actively to weak stimulii than to strong. And the third is the Ultra-Paradoxical Phase, in which conditioned responses and behavior patterns turn from positive to negative or from negative to positive at the direction of the manipulator.

...Most likely, repetitive music will be played as the people enter and seat themselves. This repetitive beat, ideally ranging from 45 to 72 beats per minute (a rhythm close to the beat of the human heart), is very hypnotic and can generate an eyes-open altered state of consciousness in a very high percentage of people. And, once you are in this alpha state, you are at least 25 times more suggestible than you would be in full beta consciousness.

A "voice roll" is a patterned, paced style used by hypnotists, when inducing a trance. It is also used by many lawyers, several of whom are highly trained hypnotists, when they desire to entrench a point firmly in the minds of the jurors.A voice roll can sound as if the speaker were talking to the beat of a metronome or it may sound as though he were emphasizing every word in a monotonous, patterned style. The words will usually be delivered at the rate of 45 to 60 beats per minute, maximizing the hypnotic effect.

Before I go on, let's go back to the six tip-offs to conversion. I want to mention the United States Government and military boot camp. The Marine Corps talks about breaking men down before "rebuilding" them as new men--as marines! Well, that is exactly what they do, the same way a cult breaks its people down and rebuilds them as happy flower sellers on your local street corner. Every one of the six conversion techniques are used in boot camp. Considering the needs of the military, I'm not making a judgment as to whether that is good or bad. IT IS A FACT that the men are effectively brainwashed. Those who won't submit must be discharged or spend much of their time in the brig.

1533. TS-130 Problems

Newsgroup: rec.radio.amateur.equipment
Date: 2003-02-11 04:11:38 UTC
From: Bill Beal <bbeal@hilcozap.net>
Message-ID: <ZJ_1a.28$j81.44408@news.randori.com>
Source record: 33465

I just fired up a Kenwood TS-130SE that belonged to my father. It had not been used in a number of years and was purchased used by him as well. It just will not receive at this point and therefore I am not going to try to transmit with it. I was listening to it using the internal speaker. There was very little noise coming out and I could hear very few if any signals. When I pressed on the area just ahead of the VOX GAIN/DELAY/ANTI-VOX controls the audio increased a great deal. When I removed pressure the audio decreased. I repeated this a few times. I shut down the radio, removed the top cover and reseated all of the connectors on the board (Left side top when facing the radio) that is just under this area and also loosened/tightened the screws holding the board. When I fired the radio back up the audio was low until I pressed on the area and then it remained high with noise. As i tuned across 20/40/80 I could only receive a few strong signals. These signals were just out of the noise. I was able to receive WWV on 10 MHz. I had my TS-140S to compare to. I was picking up a lot more signals with the 140. I can't find the manual as it has gotten misplaced in moving and storing my Dad's stuff after he passed away. Any ideas of where to look for problems that would cause this. I haven't done a reseat on all of the connectors in the RF path which might help. What problems are there that would cause substantially reduced sensitivity? BTW the attenuator is in the off position and when pressed on does it's job.

Wanted to buy a 440 crystal F.M. transceiver for a blind friend.He only needs 3 frequencies and it is easier and cheaper for him to count the clicks.Low power is fine too.
A plus would be any of the frequencies he needs which are:
444.55 +
443.70 +
446.00 simplex
THANKS

A synthesised rig will work if you can program just the frequencies he needs in to memory. If the rig uses UP and DOWN buttons on the mic, then he only needs to count the button pushes from the first to last memory. This works as long as the memories don't roll over. If they do, most rigs beep at memory position 1. Probably easier to find one of these than a crystal controlled rig, and more versatile if you need to add or change frequencies later.

Very nice Kenwood TS-711A 2 Meter All Mode Transceiver for sale. This one is in very nice original condition.It runs 25 watts and has DCS (digital coded squelch)as well as the hard to find CTCSS Tone Board installed so you can select any of the Repeater Access Tones. It also comes with the Kenwood MC-42S hand Mic. Standard equipment on this transceiver include: dual VFOs, Digital Display,40 Memories, Variable RF Output from 2 to 25 Watts, IF Shift, and Build in AC Power Supply(Operation on 12 Volts is also possible). Everything works great, including the memory backup battery and comes with the factory carton. I do not have the manual, but I believe these are available to downloaded from the internet. Price is $425 plus shipping from 76102

1547. Best miniature QRP rig today?

Newsgroup: rec.radio.amateur.equipment
Date: 2003-02-12 01:06:07 UTC

Message-ID: <3E499E09.B9C91F47@NOSPAMcore.com>
Source record: 33479
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

In your opinion, what's the best miniature QRP CW rig (or kit) sold today?

I'd like to build one for 40-meters. The Electrocraft K1 is a fine radio, but it's way too big. The size of an Altoid tin would be nice, but not necessary.

I could make a wish list with things like a superhet receiver. But I'm willing to sacrifice luxury so long as it's a rock solid performer. 3-watts output would nice too, but there I go wishing again.

I want it to be extremely reliable, well tested, and with good performance and characteristics.

Thanks for your help.

I recently programmed a 706 for a blind friend. What he did was to have me program an FM broadcast station on a particular channel, then he could count from that channel (most synthesized rigs have encoders with no end stops so if you ever loose your place you're done).

I had more or less assumed that the 706 was impossible for a blind ham because of the menu, but some of the menu beeps turn out to have a slightly different sound than others, so he was able to navigate the menus quite well.

On a 440 only rig I don't know of any places you could find an "always on" station like that, but on a dual bander you could program the weather station into channel 1, then his stations into 2, 3, and 4. He would then be able to tune around until he heard the computer voice and count from there.

..

It might be easier to find a Kenwood with the voice synthesizer which will allow him to do much more then just the three channels. I don't know about recent rigs, but I remember it being an available option on the TW-4000A, which includes two meters also.

Another possibility is one of the thumbwheel programmed rigs. A Braille mark on each thumbwheel would provide a reference.

You see, I don't recall very many crystal UHF ham radios except for GE/Motorola/RCA, and those are a little ancient and cumbersome. Also very cheap these days, I have to admit.

The Wilderness Radio SST -- a superhet single-band rig -- is popular for good reason -- it's a fine rig. I have the 40-meter version of it and am quite pleased with it.
http://www.fix.net/~jparker/wilderness/sst.htm

The S&S Engineering QRP CW rigs are superior pieces of equipment. I have their 40 and 80 meter rigs (separate, single-band rigs) These things are something to behold -- compact and small, but not tiny. MILSPEC board, case, and components. Sharp and sensitive receivers, clean keying. Fully synthesized and unquestionably stable.
http://www.sseng.com/

The RockMite is a 40-meter CW rig that fits in an Altoids box.
Single-frequency with a switch that moves the offset so you can operate on two slightly different frequencies. Neat little rig but I would not want to rely on it as my only QRP rig. Its flea power and fixed freq make QSOs hard to come by.
http://www.frii.com/~rwc/r-m/

In fact, my friend's 706 has a voice synthesizer, which is useful to him on HF where there really isn't much of an alternative. But on VHF/UHF, you would rather just go 2 clicks and be there. He has, if I recall, around 2 dozen channels programmed, but he also operates HF. Clicking past the broadcast channel is a little more convenient than pressing the "talk the frequency" button and waiting to hear the droning voice.

Have a Drake SW2 with Kiwa 4.0 filter in very nice condition, Drake remote, Drake power supply, manual, $260 shipped CONUS. Has encoder tuning problem but works great with remote. I can still fine tune with knob. Fast tuning with knob is the problem. Money back guarantee less shipping. Has great audio and beautiful display! A real bargain!

Right, it sounds like a Torx screw. They're also used in cars, to keep the yellow covers on the signal lights and stuff like that.

You can get TORX bits for drill/electric screwdrivers, and TORX screwdrivers. They come in at least three sized. (I've seen #10, #12, and #15; there are probably more.)

You can get the bits at Home Depot or auto-parts stores, and I've seen one in the auto/tool section at Walgreen's -- a neat gizmo which is a screwdriver with six bits that get stored in a rubber thing on the handle, and comes with Phillips, flat,head, and Torx bits.

I am a pilot and own an Aviator ProII hand-held. I would like to get it to work on frequencys around 150 khz (marine), right now it does only 108-136.975.

I have a yaesu two meter that was "opened up" to include many more frequencys than stock and wondered if the same can be done on a hand-held, and if so a reputable place in Orange County Ca. to do it.

Thanks, JR.

Although I am not familair w/ this radio, aviation is ALL A.M.- so unless it has an FM detector, reception of 2M etc will be distorted. I see no reason why an aircraft receiver would have an FM detector unless it had NOAA CH reception.

Message-ID: <nlu2a.53533$LW1.1777817@news1.west.cox.net>
Source record: 33399

What is the difference between the TS-830S Gold Edition vs TS-830S ??
Just labelled on the last produced or were there any circuit changes or
features ??

Any way they are winners -- among Kenwood's Best.

Post on NG please.

1580. FT-100D and FT-857

Newsgroup: rec.radio.amateur.equipment
Date: 2003-02-12 19:09:56 UTC
From: Vito Liberatore <vliberatore@denardis.com>
Message-ID: <BA700634.BC3%vliberatore@denardis.com>
Source record: 33411

I'm trying to tell the difference in features & performance. I get the impression that the FT-857 has better transmit and receive circuitry, based on the product literature stating that the 857 "borrows" and "builds" from their base station designs; But my gut tells me that the marketing department my have more to do with that than the engineering dept. Other than the display, control interface (buttons and knobs), and the menu navigation, what are the differences in these models.

I was just about to order an IC-706MkIIG until I saw the FT-857. I plan on working 6M 2M & 70CM (multimode), as well as listening to the HF bands.

Thx

Vito

Source record: 33413

I have a FT-100 and really like it, but I have never used it mobile.
I use it as a extra shack radio. I can not believe that the FT-857 would
perform any or significantly better than the FT-100. The FT-100 is a very
fine performer with built in dsp - not an extra option. The fact that the
FT-857 has a slot for an extra "real" filter for ssb or cw is nice. I think
you are right about marketing hype. I remember reading ads about the FT-100
saying it uses technology from the FT-1000 line etc. The problem with the
FT-100 is that they have suffered from a reputation of having a high rate of
failure/problems. My guess is that Yaesu felt that they would never be able
to shake that reputation without a total "new" redesign and hence the
FT-857. Personally I do not like the look of the new FT-857 with the smaller
lcd screen and could care less about it being smaller yet. I also would not
even consider buying one until it had been sold for at least a year to see
about it's reputation for performance and reliability. I think the
IC-706MKIIG is a proven radio and they are currently selling at a great
price and you probably would be very happy with it. I personally think the
FT-100D has a better receiver, better dsp, and great noise blanker, but the
reliability has been an issue and I am not sure if the current crop has
remedied that or not. Just my two cents. Good luck. --- Steve KK9ZZ

1585. Need HELP with Kenwood TS-130S problem

Newsgroup: rec.radio.amateur.equipment
Date: 2003-02-12 21:03:04 UTC
From: had@dacomp.com
Message-ID: <cEy2a.54497$yb.3863485@twister.austin.rr.com>
Source record: 33416

I am looking for help with an intermittant problem with my TS-130S. Here is what happens:

I'll be operating normaly on 20M SSB when suddenly the power output will drop to somewhere about 10 watts. Unkeying and keying again does nothing. After a time (whenever it feels like it) it will return to regular operation.

Here is what I have discovered:

When the problem occurs I can switch to CW mode, switch to 80M (where I never operate), key up and notice that I have, not full but more output than there was on 20. I then key and unkey numerous time untill suddenly full power is restored. Switch back to 20 and everything is normal. This can be done on a very consistant basis. Keying and unkeying on 20, 15, or 10 will NOT fix the problem, only if done on 80.

Any suggestions as to what to look for will be greatly appreciated. I have cleaned the band switch contacts, checked for corrosion at circuit board grounds, checked relay contact integrety, looked for loose connectors, etc. This is the second 130 I have owned that has exibited the same problem. I was never able to fix the other on either.

Thanks & take care,

Harvey, K5DDJ

Talk about "Customer NO SERVICE" !
Purchase two RascalV units based on the reviews here on eham.
Received items and one of the cables would not plug into my Kenwood
870 (13 Pin).
I verified my plug with the plug that shipped with my radio, and it
plugged in correctly.
This was a puzzling problem and I didn't want to damage my rig forcing
this plug into it.
I sent BuxCom and email, and they responded that all they have is a
fax.

I was very upset that they don't want to talk to you on the phone
about problems.
So I replied back to them to call me !

Bux called me back wanting to argue about my email I sent them.
All I wanted to do is talk to someone who could help me with a cable
problem.
How can someone run a business where they take your order via Fax or
Internet.

I apologized for my email even though I didn't feel I was out of line,
but just
to get this guy to calm down to focus on the problem I was ready to do
anything.
This problem could have been resolved by them sending me a replacement
cable.
He said he tested all of his cable, but not this one?

I told him that I was a member of a club that was getting ready to buy
a number of these units.
He replied he didn't care and didn't want to deal with people like me.
Just send it all back.

I posted my review on eHam and while looking through the reviews,
I found someone else that had a similar problem with this company.
All I can say is you get what you pay for.
If you have a problem, good luck with dealing with Bux.
Just fix it yourself.

> Talk about "Customer NO SERVICE" !

I have bought three Rascals (one ready-made and two kits) from Buck
and all of them work OK.

The ready-made came with TXD hard keying CW instead of DTR. Buck
fixed it, no questions asked.

He answers all my questions, which I keep few and short. I believe he
gets very busy, so you need to be patient.

You can't expect a 3 credit college course with a $25 kit (or $20, if
you bought during the year-end clearance sale).

These kits cost less than the cables alone run at Radio Shack.

If you were expecting the level of support you get with a K2 or CMOS4
kit, you were a little unrealistic.

One advantage of the rough-hewn approach is you will wind up knowing a
lot more about the subject than when you started -- or if you bought a
$125 Rigblaster.

Lastly, he is fast, honest and his prices are very fair.

I'm trying to determine which is the better radio, the Small Wonders SW+
or Wilderness Radio SST? Does anyone here have an opinion?

They are very similar. Perhaps this is splitting hairs. If you have
built both then I'd like to hear your experience.

Thanks for your help.

Joe, thanks for your input.

I really want to keep it small. So the S&S Ark falls out of that
category. I've narrowed it down to the Small Wonders SW+ or Wilderness
Radio SST, and posted a new thread asking for a comparison.

PROOF????? That's the most stupid thing I have read in a long time.

Billions of watts??? where does all this energy come from. Most entire
generating plants are rated at mega watts. So your talking the combined
output of many large generating stations to do this----- laughable.
You conspriacy nuts kill me, stick around you're funny.

Not to lend credibility to the claim itself, but "billions of watts" of RF is not so far fetched. For starters, power plants actually, although measured in megawatts, have output in the thousands to millions of megawatts. A single large mall at Christmastime can actually be using more than a gigawatt of electricity, and many single UHF TV stations use over a megawatt just at their transmitter sites (and in many cases, there are several of these on a site). The other reason that this is not far-fetched is that antenna gain is added into the equation. From what I have seen of the antenna array at HAARP, it could conceivably have a forward gain of over 40dB, which would mean that for a gigawatt output, they would only need 10 megawatts input. Not nearly impossible to pull off at HF frequencies with modern MOSFETs..

They are both nice radios. The SST has more limited tuning range since it is VXO. I understand these rigs are used a lot in some of the QRP contests because they can be extremely lightweight and the tuning range limitation is not an issue.

I know at least on 20m, the SST is extremely sensitive. This is good in that it will pick up very tiny signals given good band conditions (such as other SSTs!), but would not be good handling large neighboring signals of a QRO cw contest.

I think the SW+ series has a VFO with a broader range of tuning. If you want to work QRP contests as well as drop down to the bottom of the band and try QRP Dxing, then this is a better rig.

You should do MORE research. Just because you do not have
all the facts does not make someone ELSE nuts...

See

Electric prime power
will be obtained from six, 2500 kW generators, each driven by a
3600 hp diesel engine.

http://www.crystalinks.com/haarp3.html

Building the HAARP transmitter requires cutting spruce forest and filling
wetlands. Its six 3,600-horsepower diesel generators would burn 95 tons of
diesel fuel per day, producing over seven tons of air pollution. The
project's environmental-impact statement notes that the site "lies within
the Copper River Basin, which is one of Alaska's more important migration
corridors" for birds, which could be fried by flying through HAARP's
10-megahertz beams. Swans, owls and ducks could also crash into its maze of
antennas.

Also, see the PATENT for the HAARP project at:
http://www.totse.com/en/politics/us_military/haarppat.html

There are two more considerate options to consider:

A) There are various test groups out there, and you can test all day
without annoying anyone (although I'd suggest a more unique subject
line).

Some test groups have autoresponders at various locations around the
world so you will know how well the message propagated.

B) You could post a real question or comment here.

News servers and the news system are never 100%, but pretty close, all
things considered. After a lag time, things should also end up over at
Google's archives.

I figured the big retailers would update a little faster for the new
toys when they get them.

Looks like a sweet unit for mobile HF/VHF/UHF use. Pulls 22W max at
13.8V, so running on battery power at a remote site seems doable.

==========
Not a chance of a mall using a gigawatt of electricity. I used to work in
a big electric foundry. When we had a melt they used 3 electrodes a foot in diameter
at 100 volts at 168,000 amps per phase. That comes out to16.8 million watts per phase
times pi or 3.141 for 3 phase, comes out to 52.768 megawatts total. If our melt wasnt
done in 20 minutes or less the power company (large) that supplied the a.c. cut the
power cause they claimed their voltage would start to drop. 52.768 megawatts is one
hell of a lot less than a gigawatt. Thier aint no mall using a gigawatt of power. The
foundry's
electric bill was on the order of 2-3 million dollars a month. And there are few generating
stations
in the US that are rated at millions of megawatts. Many at thousands of megawatts.
And a lot of them are rated at less than that.
==========

and many single UHF TV stations use over a
> megawatt just at their transmitter sites (and in many cases, there are
==========
I dont know of any tv stations using this kind of power. If they are using millions
of watts they must be using incredibly inefficient equipment. Ive seen tv stations
transmitting kilowatts but never in megawatts. Especially since VHF and UHF is
for the most part line of site type transmission, using that much power would be
overkill.
==========

Antenna gain is a whole different creature. The whole premise of using
this to "shoot" down the shuttle is absurd. And since this takes place in Alaska
I believe,,, the whole fricking state doesnt use that much power. And where would it
come from? To my knowledge there are no really large generating plants or nuke
plants in Alaska.

Jeff

KPDX Ch. 49 in Portland, Or puts out a 5.5 megawatt signal. KWBP Ch. 32 puts out I believe 3.5 megawatts. I don't know how much antenna gain these stations have, but I'm sure that the basic transmitter for each draws on the order of a megawatt, maybe higher, what with the high level video modulation and all the peripheral equipment at the site. Remember, a transmitter site isn't just the transmitter, it's also the STL, processing, air conditioning, metering, etc., etc., which all adds up. As far as I know, the highest power a VHF channel can use is on the order of 300 KW.. I'm not certain of it, but could look it up in the FCC database. Now consider that many large cities have four of five of these UHF flamethrowers these days, and you get quite a lot of power usage. The Portland area has 22 (1.75 MW), 27 (IIRC, 950 KW), 32, 49. This along with the VHF and HDTV stuff.. not sure where the HDTV channels are, or their power output.. the VHF's are 2, 6, 8, 10, 12. There are also a few LPTV UHF'ers and one LPTV VHF in the area. And the power those all together pull out of the grid pales in comparison to the something like 1,500,000 homes in the tri-county area.

Typically a UHFis limited to 5.0 MegaWatt, mostly this is done in
antenna gain, a typical UHF transmitter is a 60 KW, sometimes a 120 KW.

1616. TR-7400A fair price?

Newsgroup: rec.radio.amateur.equipment
Date: 2003-02-13 13:15:59 UTC
From: Jason Pramas <jpramas@igc.org>
Message-ID: <jUM2a.14481$tO2.1379490@newsread1.prod.itd.earthlink.net>
Source record: 33298

Hi all,

If anyone has a moment today, I was wondering what would be considered a fair price for a used, clean, Kenwood TR-7400A 2m tranceiver--an older unit that several on Eham.com are still using 30 years in, and call a "tank". It doesn't have CTCSS tones built in (though you can possibly still get tone reeds or an external tone generator for it), but it looks o.k. for a newbie like me.

I'm considering picking one up so I can listen in until I get my license--after a old ICOM I picked up for free died (sniff).

Any advice would be appreciated. Particularly general advice about what I should consider for my first ham tx unit(s) on a Yugo budget (not a BMW budget).

Regards,

Jason Pramas

A young fellow took a K2 and repackaged it so it would mount
on his bicycle. Since the K1 and K2 are the best tested, could you
build and then doing your own mechanial repackage?

>only 108-136.975.

I hope that you mean 150 Mhz; I can imagine running a 150 KC long-wire out the back of the bird... make sure you reel it in before landing! Actually had something similar in an old Waco ARE we restored, it had 2.5-6 mc radios installed (now happily sitting in a restored Stinson). Shoulda kept that longwire reel.

And, no, the Aviator probably will not do that far, and it is AM to boot, marine is FM, IIRC. You'd probably lose TSO approval if you modified it, also. Maybe a cheap 2M rig w/wide receive or just an even cheaper marine HT?

Cheers!
A

1621. "High-End" Scanners for Sale!

Newsgroup: rec.radio.amateur.equipment
Date: 2003-02-13 15:31:44 UTC
From: klarrg@aol.com
Message-ID: <20030213103144.20685.00000248@mb-fb.aol.com>
Source record: 33303

SCANNERS FOR SALE! SCANNERS FOR SALE!!! SCANNERS FOR SALE!!!

1.)...I have a MINT CONDITION AOR AR-2002 scanner available for sale. Radio is pristine in both appearance and functionality with "surveillance-grade" reception.Covers 25-1300 Mhz (less 550-800 Mhz)but includes cellular phone bands: mil-air and civil-air bands, and even FM broadcast band). "Full" 800 Mhz reception: no "blocks".Colorful segmented LED signal-strength meter..Selectable modes (FM, WFM, AM)and search steps (5, 12.5, 25). VFO tuning knob and LCD display. Radio looks nearly identical to the AOR AR-3000 base/mobile unit and can be used as either mobile (mobile hardware NOT included)or BASE...20 programmable memories plus search and priority features.No BOX or MANUAL (if I can find manual, will include but NO LUCK SO FAR...).Operation is common as to AOR scanners, tho'... Purchase will include radio:power supply;, and back of set antenna.Approx,. 8 CPS scan speed.Great audio: works superbly.Outstanding sensitivity......$260 DELIVERED via USPS parcel post..

2.)...I have a BRAND-NEW Commtel base scanner, model COM-225 available for sale. This is a base scanner made by GRE for the European market and is also sold under the model designation "ALBRECHT AE-100T". It is a 500 channel unit capable of UNINTERRUPTED coverage from 25-1300 Mhz CONTINUOUS (no gaps..includes cell range and the usually "deleted" 520-760 Mhz range as well.).It resembles a cross between the PRO-2035/2042 and a PRO-2040.The unit has a VFO dial like the PRO-2042 and a large, yellow/orange backlit LCD display.Scan speed is a very respectable 40 CPS.Fixed search steps depending on range in increments of 5, 12.5, 25, and 50 khz. Receives FM broadcast, AM civil AND MILITARY airbands.Radio has NEVER BEEN USED but was PROFESSIONALLY converted to USA 110VAC (from UK 220VAC)using GRE parts, so no power converters, etc., required..plug-n'-play ! Good, LOUD volume and EXCELLENT sensitivity.A TRUE collector's item or, an outstanding main scanner for the novice or experienced scanner user !Includes all original packing, manual, aerial, and is in PERFECT , UNUSED condition both physically AND electronically. Selling for $265 plus $13 fully-insured, excellently-packed shipping with tracking via common carrier.

Sorry, NO TRADES or "offers" needed.Pics not available as P/C scanner "died" recently...pics can be found using browser on your P/C.. Payment by MONEY ORDER ONLY expected within 7 days of sale.All serious replies answered.Likely the only one in the USA ! Your chance to own a true one-of-a-kind radio , PLUS...you don't have to RISK trying to IMPORT it!)<: ! No sales outside USA, Email me with ???'s: all serious replies answered. THANK YOU !

Ahem! While the dB gains are achievable, they are in reference to either an isotropic source or a dipole.

It simply means that the 10 megawatts, instead of being spread all over the place is sent in a narrow beam. It is still 10 megawatts.

Stated another way, it would take a 40dB increase in power to provide the same signal at a specific point if the source were a dipole.

Madam, you are quoting ERP, not actual power. It is easy to bandy about Gigawatt numbers, not as easily achieved.

Hi. Can anyone recommend a currently produced 2 meter convertor. Heck, I don't even know if these things are commercially made anymore. Last one I had was from Microwave Modules, but I cannot seem to locate a MM convertor on the web. Maybe I have to homebrew. TIA. Rich.

I have an NEC Versa 4050C laptop for sale.
90 MHz Pentium
815 meg hard drive
16 meg ram
1.44 meg floppy(removable)
CD rom(removable)
2 PCMCIA slots
1 serial & 1 parallel
2 good batteries
1 charger/power supply
10.4" TFT active matrix display
leather carry case
Win 95 & much more
Asking $110.00 + $15.00 shipping and insurance to the lower 48 only.This laptop was kept as a spare
and is in like new condition.

Regards
Bob Stamper

1637. Ferrite tuning slugs for TS-520 coil pack

Newsgroup: rec.radio.amateur.equipment
Date: 2003-02-13 18:30:14 UTC
From: George McCouch <K3UD@charter.net>
Message-ID: <K3UD-4A21B9.12301413022003@news.uswest.net>
Source record: 33319

I have acquired a Kenwood TS-520s that I would like to put into service. Someone had attempted to "tune" the slugs in the coil pack, (located on the bottom of the rig, with access holes conveniently located for those with a golden screwdriver) and damaged many of them which will have to be replaced.

Anyone have information on the size and threading, and possibly a source of supply? Any suggestions on getting damaged slug out of the coils?

Thanks
George

What no conspiracy theorist has ever been able to explain is how a few microvolts of RF coming from up there in Alaska can influence people's thoughts or moods. We all know that even a station putting out megawatts thousands of miles away will produce only microvolts in an antenna. I would think that my own ham station transmitting 100 watts would produce more of an effect than that, due to the near-field RF. And yet, I don't feel any different when I'm on the air.

Tom

I have a Kenwood TM-741A 2m/70cm FM Transceiver with the UT-28s 28Mhz FM module and the TSU-7 CTCSS unit installed. I also have the DFK-4C 4M detachable front panel kit. I have all the original boxes and materials except the 741A manual. The transmit and receive have been opened up and everything is in good to excellent condition. I want to sell it to offset the cost of a new radio, But I haven't seen any for sale to gage going price.

I do not know the difference between the 741's and 742's. Did the 742 replace the 741? Are the features similar?

I have never sold or auctioned anything online. Is eham a good place to sell stuff?

LOTS more.

My smallest is about 1mm diameter (point tip to tip) and the torx
screws on my truck's door hinges are about 10mm. My kit of torx
drivers has 30-some bits...

One big advantage of the SW+ series is that there are a large number of sites that use it as a tutorial example. If you plan to build it, and learn from the experience, it is the way to go. There also seem to be a lot more of them floating around, for whatever that's worth.

HAARP microwave weapon disaster [of Columbia Space Shuttle] has
ancient ties to space warfare:

Akheneton is Isis-Ra-El or Moses
-- conspiracy in northern Greece, circa 3000 BC

http://www.a-m-h-r.org/aa/starry.html

The unfolding of the revelation of this plasma is made possible by the
fact that we ourselves are also the stuff that stars are made of. Our
electro-magnetic relationship as a race to the very stars in the sky
that we see at night is intimately integrated and potently plays
itself out in human history. It is non nuclear plasma, non-ionic,
non-electric, a form of magetism and gravity that we are completely
ill adept to translate with present day science.
http://www.angelfire.com/electronic2/haarpmicrowaves/haarp_conspiracy.html

"Let the stars be burnt up in the fire of my nostrils! Let all the
gods and the archangels and the angels and the spirits that are on the
earth, and above the earth, and below the earth, that are in all the
heavens and in all the hells, let them be as motes dancing in the beam
of mine eye!

I am he that swalloweth up death and victory.

Then there is a great plain with soldiers fighting upon it, and an
enormously high mountain carved into a thousand temples, and more
houses and fields and trees, and great cities with wonderful buildings
in them, statues and columns and public buildings generally. This goes
on and on and on and on and on and on and on all on the hairs of this
lion's tail.

And then there is the tuft of his tail, which is like a comet, but the
head is a new universe, and each hair streaming away from it is a
Milky Way. And then there is a pale stern figure, enormous, enormous,
bigger than all that universe is, in silver armour, with a sword and a
pair of balances. That is only vague. All has gone into stone-gray,
blank. "

I AM in a vast crystal cube in the form of the Great God Harpocrates.
This cube is surrounded by a sphere. About me are four archangels in
black robes, their wings and armour lined out in white. In the North
is a book on whose back and front are A.M.B.Z. in Enochian characters.

In recent years it was discovered that the Redwoods and Sequoia trees
had excess lime deposits at the base of these trees. Is it possible

that these trees have evolved the technique to remove the lime from their water before it is taken in? [3]

"Lime is a coarse, white, solid substance that has many industrial uses. It is very caustic (strongly alkaline), and can rapidly destroy animal and plant tissues. It is often used to treat waste materials. It has a strong chemical action when mixed with water, and may become hot enough to boil the water.

Manufacturers use it in gas welding, glass, steel, refining sugar, bleaching powder, fungicides, fertilizers, cement, mortar, and whitewash."

And behind the plume is a shining filament of quartz, suspended vertically from the abyss to the abyss. And in the midst is a winged disk of some extremely delicate, translucent substance, on which is written in the "dagger" alphabet: Torsion is iniquity. (This means, that the Rashith Ha-Gilgalim is the first appearance of evil.)

There is a clash of a myriad silver cymbals, and silence. And then three times a note is struck upon a bell, which sounds like my holy Tibetan bell, that is made of electrum magicum.

The four Enochian characters are each attributed to one of the four Cherubic signs; Taurus, Aquarius, Aries and Leo, respectively. The robed archangels are the four Guardians; the four Watchers; the Four Horsemen, esp. Gabriel, aka Fomalhaut; the Nephilim or Secret Chiefs.

First is the possibility that through crossbreeding with cavewomen, man as we know him shortened his life span. This would mean that Noah's three sons brought with them wives, who were not pure descendants of Adam but those of the Anakim (Heb. ï¿½anaqim, sons of Anak, Heb. ï¿½anaq, long-necked) or possibly the Canaanites. The early Sumerian texts called them Anunnaki, "those who came from heaven to earth."

The Anakim as in Genesis 6:4 they are the sons of the sons of God, they are called the Nephilim (uncertain etymology, fallen ones), or giants (Heb. rapha, raphah, Heb. gibbor, mighty, Rephaim of Canaan ancestor of Og, king of Bashan, Emims of the Moabites, Zamzummims of Ammonites Heb. murmurers, Zuzites in Gen. 14:5) who were of old, men of renown. This crossbreeding may be the reason why the ancestors believe that sexual relations could affect one's health. One might even suspect that the Anakim were possibly the Greek Gods of mythology 'fallen angels' the original Hebrew 'B'nai Elohim' who did not survive the Flood.

The second possibility is the atmospheric change of the ozone layer.

If this layer had been denser, then the immense radiation of ultraviolet rays was less also. Radiation is the possible cause of aging directly or indirectly in humans or animals. So when the change in the atmosphere came allowing more radiation to strike the earth's

surface it also caused more rapid aging. Little is known about the factors involved in aging.

The process seems to be correlated with specialization of cells for one or a few highly specific functions. The cells of these ancients were potentially immortal. Furthermore, the amount of radiation damage would be proportional to the chronological age. I do not think man's nervous system could take the strain his complex and fast modern world exerts on him in a thousand years, so in that sense man is better off with a shorter life span.

Apparently the dense clouds kept the radiation from affecting the water and prevented any variations in the atmosphere's temperature.

Water to the ancients was believed to have extraordinary chemical and medical properties, as if it were a universal solvent ensuring longevity. This Tradition is in harmony with modern science, which takes the view that water is a strongly reactive and highly complex mixture. Researchers study oligo-elements and observe that all metals are soluble in water in the presence of certain catalyzers such as glucose at certain temperatures. Some biologists think that old age is due to the accumulation of heavy water [deuterium] in the organism.

Some scientist believe that certain glands in the human body that no longer function may have caused the increase in the aging process.

The elimination of heavy water [deuterium] may prolong life, and such substance may exist in evaporated water, which could cause a reproducing of cells for centuries. Water then may be capable of prolonging life to a considerable extent by rejuvenating the tissues.

The answers may lie in the woody perennials, of which the Giant Sequoia and Redwoods are extreme examples. They may live for thousands of years, always continuing to grow. Maybe trees such as these contain a function incomprehensible to us in which water is transformed or unaffected by something that causes a rejuvenation of its cells.

[2]"Redwoods are among the world's tallest living trees. They grow 200 to 275 feet high and are 8 to 12 feet in diameter. In a typical redwood forest, these massive trees grow close together, shutting out most of the sunlight, leaving a cool, dim atmosphere. The Sequoia tree ranks among the largest and oldest living things on earth. Millions of years ago these trees grew in large forest throughout the world. Many of these trees are several thousand years old. Some present day trees are estimated to be 3,500 years old, around 1,305 B.C."

It is worth reminding ourselves, then, that the biblical edict to abstain from blood came not from Enki but from Enlil -- the God who had instigated the Flood, had wrought havoc in Ur and Babylon [but not Lot's Sodom and Gommorah], and had endeavoured to help Adam by saying that he would die if he drank from the Graal of Blood. This was a god who liked people, and the Sumerian records are very clear in this regard. Hence, if he forbade the taking of blood, this was likely to

have been an edict for the benefit of Noah and his descendants - it
was most probably the basis of their survival!

In strict terms the original Star Fire was the lunar essence of the
Goddess, but, even in an everyday mundane environment, menstruum
contains the most valuable endocrinal secretions, especially those of
the pineal and pituitary glands. The brain's pineal gland in
particular was directly associated with the Tree of Life, for this
tiny gland was said to secrete the very essence of active longevity,
called soma, or, as the Greeks called it, ambrosia.

In ancient Sumer, the key females of the Dragon succession were all
venerated as lilies [many lillies are clones and have no reproductive
capacity, some of the loveliest on earth -- lillies also have a
propensity for volcanic soil], having such names as Lili, Luluwa,
Lilith, Lilutu and Lillette.

Oh and, the S&S Ark consumes 400 mA on recieve, way too much for battery
operation.

Build or buy an interface relay.
If you wish to build your own, I have a design or two on my web site, free.
www.qsl.net/kk5dr/

To buy one, Ameritron and MFJ have a few models.
There are also a few other web sites that offer to sell you one.

Good luck

Message-ID: <s2X2a.147437$i73.35191592@twister.neo.rr.com>
Source record: 33340

Hello,
I am about to get an HP spectrum analyser cosisting of a 141T mainframe unit, an 8552B IF plug-in, and an 8554B analyser plug in (does anyone know the display sensitivity?). One problem I have is that the 8554B only goes as low as 100kHz; this being a problem because as well as using this for radio work, I would love to apply this to audio work as well. I would assume one could make some sort of adapter for this, however since I want to view the harmonic content of a signal applied to an amplifier stage, component, etc., I'd think that the frequency & noise products of such an additional stage would defeat the purpose while also lowering sensitivity.
So, does anyone know of a "low frequency" plug-in for this mainframe?
What about a good (but not outrageously expensive) alternative for LF use?
Thanks,
Nick

Actually, for some modulation protocols (radar pulses ~10 us each
of a carrier in the range 300 MHz - 3 GHz), the human ear is very
sensitive to the EMR; it can detect a pulse only maybe 10 dB
above the threshold of a tuned receiver. However, hearing a "click"
or a "pop" is a far step from being "controlled" from a distance.

If we could be controlled by hearing stuff, the hearing theorists
would have made us dump all our TV's long ago.

I don't get the "antenna gain" argument: It applies to a receiver
because a big antenna can collect more irradiance. However, a
transmitter can't transmit more power than it has; so, a
1 MegaWatt transmitter never can average more than 1 MW anywhere,
by means of any antenna.

There are several good programs for the PC that provide audio spectrum analysis via the microphone or Line inputs to a sound board. This may be a better solution than trying to retrofit an analyzer that was designed for RF.

50 to 75 dollars would be good. The problem is that the rig is worth more than that, but because of the new rig prices at 120 dollars and up, it is not worth it for the owner to sell it. If you can get it in that range, you will be doing ok. Factor in 30 dollars for a ComSpec SS32 PL encoder, and you are at 80 to 105 dollars. For 120 dollars or so, you can buy a brand new rig, already with PL encode.

Pete

Not true. Antenna gain effects the ERP of a transmitter. This is the
Effective Radiated Power. For instance, an antenna with only a 3dB power
gain will allow a transmitter with only 1 watt of power to appear to be
transmitting 2 watts of power. This apparent gain is made at the expense of
unity of coverage. In other words, the radiation pattern is affected. In the
case of a yagi antenna, the power output is focused in one primary
direction. You "gain" power in that direction at the expense of signal to
the other directions.

The 8556A plug-in covers 20 Hz to 300 kHz, specifically designed for audio work. It has a built-in tracking generator. It will work with your 8552B IF unit. This is not a 'retrofit' as suggested by another poster. It is a standard component of the 141T-series specan equipment.

I just checked eBay, and there is currently a nice one open for bid, closes in four days, guaranteed working with a five-day right of return. Five of them have closed in the past two weeks with selling prices in the $100 - $200 range.

Hi Tom,

I don't know what the SHIFT-ADJ does (didn't even know it existed until
ur post) but if you press and hold the MENU key for 2 secs the word "GOOD"
appears and the radio turns on.

Didn't find any mention of SHIFT-ADJ in the manual or on the web.

You do not get increased power. If you have a garden hose that puts out 5 gallons per minute, you can put it through a 360 sprinkler or a directed nozzle. While you can get me wetter with the directed nozzle, it is still 5 gallons per minute. To get me just as wet with the 360 sprinkler would require considerable more water flow.

All the "gain" in an antenna is in comparison to a reference dipole.

With all due respect, your understanding of gain increasing power is incorrect.

I don't know if it's still in production, but Tokyo Hy-Power used to do a
5-band transverter, i.e. 80, 40, 20, 15 and 10 from a 2m exciter. I don't
know if they currently have an importer, but I understand they are happy
to send equipment to customers direct from the factory in Japan.

I think you're wrong there. It works both ways, whether transmitting or receiving. A high gain directional antenna, such as a beam, can seemingly increase the transmitted power of a signal. This is because most of the signal is beamed in one direction instead of omnidirectionally. So the transmitter power isn't increased, but the ERP is.

As usual in these groups, we are asked for help with very little information from which to proceed. You want them of "various sizes". What does this mean? If you have the RF designs, why don't you have the microstrips that go with them?

Give me a concrete example, such as the impedance you want, the electrical length you want, the type of material you are using as a substrate (i.e. alumina, pcb fiberglass, ???) and the thickness of the metal trace. I'll work the example and then tell you where to go to find the same software I used for the example.

1680. ic-730 frequency adjust

Newsgroup: rec.radio.amateur.equipment
Date: 2003-02-14 20:51:23 UTC
From: Francois <fproulx@NOSPAMvideotron.ca>
Message-ID: <hlc3a.15343$y72.312306@weber.videotron.net>
Source record: 33363

Hi

I just checked the transmitting frequency of my "10 years not used ic-730" and it is off by about 2khz on 80m, 1 khz on 40 and 20m and about right on 10m. This was mesured with a hp frequency counter at the antenna (not matched) , with minimum power, about 10w. I know I should use a dummy load to make those test. It is in my projects to build one, but to my defense, I keyed only 1 or 2 seconds on each band :))

Last time I used this rig, people would answer my cq at a different (higher)frequency (from the one of my receiver). By using the rit at is max range, I would be able to hear the answer.

I have not yet checked my receiving frequency for acuracy, since it would be a little more complicated than to check my transmitting frequency, but I imagine it is almost right.

What trouble me is the fact that the receive and transmit frequency are not the same. I always tought that they were using the same vfo frequency. Also, how can the frequency error can be greater at 80m and almost perfect on 10m.

I have the instruction manuel of the rig, and there is a frequency adjust, but, since it is not a rx or tx freq. adjust, I think it should adjust both, wich won't help me.

It's been 12 years since I last use my ham knowledge (for what little I ever had), so I' m rusty and maybe my trouble is not as big as I see it.

Any help would be appreciated.

Thanks,
Francois, ve2tta

PS: excuse my poor written english, french being what I use daily

I think I see the problem: I am referring
to total power output, which would be measured
in Watts; you are referring to intensity
or irradiance, which would be measured in
W/m^2 or W/cm^2.

For example, a 1 W source at 10 GHz could
have, say, 25% of its output collected by a
parabolic antenna and focussed onto
an area as small as 1/2 wavelength square
(1.5 cm x 1.5 cm ~= 2.5 cm^2).

So, it could provide .25*1W/2.5 ~= 0.1 W/cm^2.
This could be achieved at a distance of 100 m.

However, without the parabolic antenna,
using the inverse-square law, a 1 W
nondirectional source at 100 m would
irradiate any small area at only about
25 uW/m^2 ~= 2.5 nanoW/cm^2.

So, there would be an "antenna factor"
of around 1 billion, in this artificial
example. But, the power delivered even
with the parabolic antenna would be LESS
than the power actually radiated by the
transmitter.

If there is a 1 MW transmitter, it won't ever be able to deliver 1 MW in any localized region, anywhere, assuming it actually is radiating and not just hooked to a waveguide or in a cavity.

I would guess that a 1 MW transmitter might be designed to radiate 1 MW upward, so maybe all of it would hit the ionosphere somewhere. But the antenna factor really wouldn't matter much at all. Maybe it would be 2: Instead of losing half of its power downward, it all would go upward.

Hi Harvey,
A structured approach to troubleshooting is the way to go.
1. Monitor the voltage feeding the finals, +12v (vcc line). Is it
there, and stable?
2. Drive to the finals, at 100 watts vs when it goes to ten watts?
You could use an rf probe at the bases of the finals, or possibly
Kenwood provided some sort of test point to check for drive.
3. If you've got drive, and you've got voltage to the finals, then
suspect something changing between the finals and the antenna port.
Check continuity of all the solder joints in the final tuned circuits,
relays, etc.

To troubleshoot any other way is hit-or-miss.

Does NOT do crossband repeat, sorry.
To do crossband repeat you need a rig that will receive on one band
at the same time it transmits on another. The 706 does not do that nor
does the FT-100, FT-857......

1694. FS Ten-Tec Omni VI opt. 3 with all filters

Newsgroup: rec.radio.amateur.equipment
Date: 2003-02-15 06:01:52 UTC
From: Dave Heil <k8mn@earthlink.net>
Message-ID: <3E4DD7BD.7A24D9B1@earthlink.net>
Source record: 33376

Orion? You bet I want one. Toward that end, I'm selling my Omni VI option 3 (in good, clean cosmetic condition and in perfect working order). This one was the A22MN, OH2/K8MN, 5H3US rig. It has the upgrade to TCXO and is just back from factory service to correct a hearing problem (and both alignment and functionality were checked). There is a factory mod which added a relay to ground the aux rx antenna input during transmit for front end protection when using an auxiliary antenna. Included are 2.4 KHz, 1.8 KHz, 500 Hz and250 Hz filters and 2.4 KHz and 500 Hz filters in the narrow positions.

Price is $1800 + UPS shipping.

Speak now or it goes to ebay!

Dave Heil K8MN

Classic IC-2SRA 2 meter HT. The IC-2SRA has a second 25-950mhz (non-blocked) scanning VFO built-in. Unit is in excellent condition and includes: One BP-82, three BP-84s, one BP-84x (Nimh), MFJ285w speaker/mic, AD-20 external clip on battery charger, CP13 car power plug in adapter. The IC-2SRA has all original boxes and manuals. Price is $225 shipped CONUS from 45241. Email for details if interested. Thanks.

Hi Mitch,

Download AppCAD http://www.hp.woodshot.com/

Select Passive Circuits (bottom left) then Microstrip.

A few assumptions:

Sounds like you are new to this area so you won't be using any exotic substrate. 'Regular' fiberglass PCB material is usually FR4 (please check in your case), so pull down FR4 (Er = 4.6).

If you are making this yourself you are probably using 1/16" material, double sided (very common), if so set H = 63 mils (1/16"). Laminate thickness doesn't affect impedance too much so set T = 2.0.

Width does affect impedance, set W = 114 mils.

Hit F4, impedance = 50 ohms.

AppCAD is very easy to use and should give you a good intuitive feel about Microstrip very quickly. Obviously waggle parameters and see how impedance etc. are affected.

This should hopefully be a reasonable start. Also explore the rest of AppCAD. Another free package worth looking at is RFsim99, great for exoploring S parameters etc.

Regards,

Mark.

Ave Maria... I could of sworn someone told me once that it did. Oh well,
I'll still have a better setup in my driveway than in the whole yard:)
Has anyone discussed the selection of transceivers with Cross Band Repeat?
Maybe a comparison/contrast and application could help clear my confusion.
I've never used one but have heard one or two gents remark that they like
the option. I must admit that the major manufacturers tended to confuse me
a bit with the "autorepeater" and other marketing terms and I don't see much
documentation on the subject.
Thanks GS.

HAARP and ELF: Some other important supporting technologies for an
HPM weapon system are target tracking and aiming equipment and methods
of damage assessment.

Target tracking and aiming for HPM weapons is, in one sense, easier
than for lasers because the beam width and spot size are so much
larger. On the other hand, since one advantage of the microwave region
is its ability to penetrate smoke, clouds, and fog, target tracking
may have to depend on radar imaging techniques. Aiming can be
difficult mechanically due to the size of high gain antennas.
Electronic beam steering would depend on accurate phase control of
multiple HPM sources. Damage assessment is perhaps the most difficult
supporting technology of all to develop. Since HPM weapons usually
depend on electronic kill or upset, there is no "smoking hole" as an
observable.

Russia.

A BRIEF TECHNOLOGY SURVEY OF
HIGH-POWER MICROWAVE SOURCES

This work was supported by Lockheed Martin Corporation
under DOE Agreement number 00AL66799.

A Brief Technology Survey of High-Power Microwave Sources

Larry D. Bacon and Larry F. Rinehart
High Power Electromagnetics Department
Sandia National Laboratories
P. O. Box 5800
Albuquerque, NM 87185-1153

Abstract

This report provides a brief summary of the characteristics of contemporary high-power microwave sources. The focus is on their physical and operational characteristics and regions of application rather than their theory of operation. Magnetrons, linear beam tubes, split-cavity oscillators, virtual cathode oscillators, gyrotrons, free-electron lasers, and orbitron microwave masers are described. Power supply requirements and engineering issues of the application of HPM devices are addressed.

2.5 VIRTUAL CATHODE OSCILLATORS 10
2.6 GYROTRONS 11

2.7 FREE-ELECTRON LASERS 11
2.8 ORBITRON MICROWAVE MASERS 12

3.0 POWER SUPPLIES FOR HPM SOURCES 12

4.0 HPM SOURCE ISSUES 12
4.1 COMPACTNESS 13
4.2 EFFICIENCY 13

4.3 ANTENNA SIZE 13

4.4 PEAK VERSUS AVERAGE POWER 13
4.5 SUPPORTING TECHNOLOGIES 14

In impulsive sources, the RF generator is implemented by charging the antenna, a transmission line, or a tuned circuit directly and causing them to
ring for one or several cycles by closing a switch. Examples of this source type are the various ultrawideband (UWB) sources and the LC Oscillator (LCO).

In linear beam sources, the RF generator includes an electron beam generator, beam transport, and a wave structure. These sources work by converting the kinetic energy of an electron beam into the

electromagnetic energy of the microwave beam. Examples of these sources include:

ï¿½ Magnetrons
ï¿½ Linear Beam Tubes (Klystrons, Backward Wave Oscillators, Travelling Wave
Tubes)
ï¿½ Split-Cavity Oscillators
ï¿½ Virtual Cathode Oscillators
ï¿½ Gyrotrons
ï¿½ Free-Electron Lasers
ï¿½ Orbitron Microwave Masers

4.0 HPM SOURCE ISSUES
Several issues must be dealt with before HPM sources can be taken out of the laboratories and weaponized. They include compactness, efficiency, antenna size, and peak versus average powers.

4.1 COMPACTNESS
Compactness is a general problem of military applications of HPM sources. (Benford and Swegle 1992, 19) The size of a particular HPM technology is often not apparent from a book or technical article describing only the tube. It is an HPM weapon system that must be fielded, not just a tube. The system includes the prime power source, power conditioning, microwave energy transport to the antenna, and the antenna. High powers, whether peak or average, drive up the size and weight of the system.

4.3 ANTENNA SIZE
High power density on target at significant ranges requires both high powers and high directivity in the antenna. High directivity requires an antenna many wavelengths in size.

Maneuverability requirements, survivability under fire, drag, visual signature, etc. make room for large antennas very difficult to find on any platform. In addition, increasing the power passing through a fixed antenna aperture increases the probability of electrical breakdown, especially at high altitudes or in a dusty environment.

Magnetrons, linear beam tubes, and vircators operate at high peak powers below about 10 GHz. Cavity dimensions and frequency are inversely related. High frequencies, then, mean smaller cavity dimensions, higher power densities,

Microstrip impedance depends on several things such as board
thickness, copper thickness, dialectric constant etc.
Download a free copy of AppCad from www.agilent.com
It will design microstrip and other transmission lines for you.

Steve

1722. Re: And if you need a Bird 43 manual...

Accordting to the Bird 6100 Manual, the Diode is a 1N79.

However, looking at another manual, they use a 1N21B or 1N23C. They all rectify RF up to 1 Gc.

They are usually a matched pair, but if you put one in, there are adjustments by removing the slotted screw beside where the diode goes and using an allen key will allow you to calibrate the meter against one that you know is accuate.
Good Luck...Norm VE3CZI

From: Chuck/KE4ETH <chuck_hawks@hotmailNOSPAMORAMA.com>
Message-ID: <laD3a.3880$6H.400@fe09.atl2.webusenet.com>
Source record: 33211

I have a Tempo One that I aquired with 2 others for parts. The plate choke had been removed from the one that is in the best shape. The other two have a plate choke. One is a linear wound and the other is a three section Pi wound. I'm not sure which type was in the one that I am restoring. Should it make any difference. The older parts rig has the linear and the newer parts rig has the Pi. The one being restored is SN between the two.

Any help would be appreciated.

Source record: 33216

Yaesu FT-2600 Advice Needed:

I have a new ... (purchased from AES in December)... Yaesu FT-2600M.

The FT-2600 should have a RF high power output of 60 Watts.

I have just measured the high power RF output using a Diamond SX-600
Watt Meter, and it reads only 40 Watts.

The meter is accurate as it reads correctly on the 3 other radios that
I have.

I have also read on eham.net that others have experienced the same
problem.

Does anyone know of a fix for this issue, software or hardware, or is
my new radio defective.

Any advice is appreciated.

Source record: 33219

Hi Guys;
I have for Sale:
2- Giant Millen Variables.
First is a #16520, 40-230pf, 9-1/2"l x 4-3/4"h x 4"w, 1/4" shaft, 5/32" air gap, all SS/Aluminum/Ceramic or insultite?
http://www.myradioroom.com/millensingle.jpg
second is anothe Millen, 2-section, 28-260pf ea. w/1/16" air gap, 1/4" shaft, 9-1/2"lg x 4-3/4"h x 4"w, same construction.
http://www.myradioroom.com/millendual.jpg
Price is $100 + ups.
You don't see these that often & forget the cost of anything new that does'nt even compare.
I wish I did'nt have to sell them because I have been saving these for years :-(

Thanks & 73,
Rich WA2RQY(1961)

My experience has been the EXACT OPPOSITE!

Buxcomm sold me a superior product at the BEST PRICE.

If you wanted something in a fancy metal box you should

have bought one of those $150 interface boxes.

If you were not smart enough to figure out how to use it
you bought the wrong thing. To be honest I had a couple of questions,
but K4ABT personally answered me via e-mail twice and got me up and
running easily.

I have had ZERO problems with Buxcomm! GREAT guy!

Maybe you should stick to "slop bucket" (SSB) hi hi!

I'm entering into this wonderful world and I wouldn't
spend a lot of money (< 400EUR/US$); my antenna
is a simple diple.

I was thinking to get a TS530 Kenwood; I seen it,
second hand, at 350Eur/US$.

How it is performs? Is it a real garbain?

Does it is much obsolete?

Thanks in advance
Ale

1748. Kenwood DRU-2 Manual Needed

Hi Ale,

I bought a TS530S back in 1985 in used condition. I have other HF radios, but I still use the TS530S almost every day. I believe I paid $300 US for it used. It has been a great radio !! It uses 6146 tubes in the final stage. You can usually find these tubes at Hamfests fairly reasonably priced. It lacks a lot of the bells and whistles of today's rigs and you do have to go through the "tune-up" process when you go from band to band, but still a great rig.

Ale -

The Kenwood TS-530 is an excellent choice for a first rig. Several people have recommended it as such at http://www.eham.net/reviews/detail/627 -- normally a reliable source for amateur radio reviews.

As usual, if you are not too familiar with what to look for when buying used Amateur Radio gear, see if you can have a friend with more experience with ham radio go with you to look at the equipment before you buy.

I have a Kenwood TS-520 myself, which is not too different from the TS-530; it lacks the 12, 15, and 30 meter bands and does not have the digital readout that the TS-530 features, but the performance of the '520 is good enough that I honestly don't see any real reason to "upgrade" to a more modern receiver. Even with digital signal processing and fine tuning and filtering that modern rigs feature, I still like the performance and quality that the '520 offers. The TS-530 and similar Kenwood radios are in no way obsolete.

I'm not familiar with pricing in your area, so you may wish to ask other hams you know if 350Eur is a fair price.

Welcome to the hobby.

Hi,

Radio Shack is getting out of the Ham business and has marked down
their Ham Xcvers.

10 meter xcvr was 189 now $89
2 meter mobile was $189, now $89

Hurry, I bought one of the 2 meter ones yesterday.

Another post by someone else said they have a spk/mic and 10 meter mag
mount dirt cheap.

Where did you here this? And where are you located?

By the time I read this, my local Radio Shack was closed for the day,
but I called one in another time zone and the fellow I talked to laughed
and denied this.

Feb 16/03
Wanted: manual for AEA "The Morse Machine" MM-3

I have an old keying/training unit made by AEA in the early 1990's (?) It is "The Morse Machine" model mm-3. I've searched the internet, but could find no manual in text or PDF format. I can't believe it is not available , somewhere, in electronic format. No joy at the modern AEA and Timewave site .Has anyone found an electronic version?? Thanks and 73's de Tom, VO1TV

1760. Re: Plate Choke Question

Source record: 33240

Thinking back to my Navy tube days, I think the linear-wound choke is for smoothing/blocking while the pi-type would in some sense be a harmonic blocking filter. Seems the linear should go from plate tap to B+ while the pi-type should go from plate tap to output

When I tried Mntty thru the soundcard I was able to use the same interface that I built for digipan. Check out the digipan docs, that shows you how to interface a radio to a sound card. Digipan, Mntty, Cwget and Cwput all use the same interface, the only one that is different is the slow cw program whose name escapes me right now, it used a different pin to key the transmitter, but in that case I just made a null modem style pin swapper that I would add when using it.

As long as you have a mic in, spk out, and a serial port on the computer you have all you need there. On the computer end you just need to locate mic in, spk out and ptt.

The interface I built used 2 audio isolation transformers, 2 transisters, a couple of resisters, and maybe a diode or two. Took all of 10 minutes to wire it up on a perfboard.
thanks, John.

Normal product life for Radio Shack equipment is about one year. Either they go to a improved model or they drop it. In either case often they mark down the current model to move it out of the stores before the latest and greatest shows up. They did this with the dual-band HTX-245 when they came out with the dual band, more features & higher power HTX-420. The HTX-245 was marked down from 239.95 to 169.95. The HTX-420 is 269.95. I almost want to wait til it goes down, maybe to 190 or so unless they have limited production.

1763. Re: Newbie: Kenwood TS530, how it performs?

Newsgroup: rec.radio.amateur.equipment
Date: 2003-02-17 01:18:28 UTC
From: Murray Green <mgreen@erols.com>
Message-ID: <3E503864.48168CCE@erols.com>
Source record: 33245

*** Older type manual tuning of transmitter but an excellent receiver.
Be very "gentle" with band switch for some reason the 530 has had
problems with them. Make certain it is working and tight before
purchase. Expensive to replace.

Average price for the TS-530S is $334 and the TS-530SP is $408. I had
the TS-830S which is the upgrade of the 530 but essentially the
same receiver. Sorry I sold it but upgraded to a TS-940.

Before purchase have a friend who knows what he is doing, check it
out thoroughly on the bench. Good luck.

The difference is in the way they control resonance in the choke itself.
If part or all of a winding and the distributed capacitance forms a
resonance, at one of the operating frequencies, the circulating currents
can burn up the choke.

Thanks for your response.

My VSWR is low 1.2:1. I use the antenna on 3 other radio's and have no problem.

The low wattage reading is only with the FT-2600.

Any other ideas?

Source record: 33255

Yaesu FT-2600 Advice Needed:

I have a new ... (purchased from AES in December)... Yaesu FT-2600M.

The FT-2600 should have a RF high power output of 60 Watts.

I have just measured the high power RF output using a Diamond SX-600 Watt Meter, and it reads only 40 Watts.

The meter is accurate as it reads correctly on the 3 other radios that I have.

and.. my SWR is low 1.2:1. I also use this antenna with 3 other radio's and the only problem is with the FT-2600

I have also read on eham.net that others have experienced the same problem.

Does anyone know of a fix for this issue, software or hardware, or is my new radio defective.

Any advice is appreciated.

Howdy all!

Have for trade, one Yaesu FT-90 mini dualband mobile radio. Includes manual, box, etc.

Radio has MARS/CAP mod. and has been mobile all its life. In excellent condition, not beat, not scratched up, not faded or any other common cosmetic problems. Only in a family vehicle for about 2 years.

IF YOU ARE LOOKING FOR A RADIO TO USE OUT OF BAND, MARS/CAP, ETC, THIS IS NOT WHAT YOU WANT.

Which is exactly why I'm wanting another.... this radio is not an "out of band" unit. It performs poorly outside the UHF ham bands and I need a reliable monitor for frequencies other than ham. Works all over VHF band and does well.

I would like to trade this for something in the Kenwood, Icom, Standard line, about the same vintage/value. I will pay small differences, etc. if necessary.
Anyone have anything that will perform well around 462 and 155 as well as amateur freqs?? PLEASE make sure your offered radio doesn't drop off major wattage or sensitivity across the bands 136-174 and 440-470.
Not interested in Alinco, ADI or low-end radios. I'll consider another Yaesu if it can support the requirements!
Please email offers direct but keep the flames within the group, I appreciate it.

Who sends first? Depends on what references you can offer. I will extend same. Sorry to be so hard on strangers. You can thank your local internet crooks for that.
Thanks for the time!

Randy

What are you using to power it?

I bought one of these for my son and myself for Christmas, and haven't gotten around to installing it yet. I think I remember reading something somewhere that it likes 15 VDC for maximum power out...but I can't clearly recall where I heard it.

Anyone parting out an SX-101 or SX-101A?

I'm looking for one of the little spring-metal clips that
holds the outer dial glass in place on the back side of
the front panel bezel. Not sure what the "official" name
of this part is, but if you have one, then you know what
part I'm talking about. I just need one of them.

Thanks and 73,
Dean K5DH

Well so much for this troll, not even a real email address.

My Rascal worked perfect after I built it per the instructions.

Maybe this Tony guy needs to setup his comm port properly.

Message-ID: <3E5100D3.E37FFC46@nospam.net>
Source record: 33265

Hi,

I agree with other posts, the 530S is great radio for first timers.
Nothing fancy to break.

Use a good quality contact cleaner, these radios can have dirty contacts
if the sit too long and
not get used on the air. Just a little is needed, it also cleans up the
pots. Deoxit is great.

Be sure to get copy of service and owner manuals for reference.
Easy to repair if it breaks. Common parts. No Surface mount stuff.

Get an antenna tuner, the matching at-230 is nice. Any tuner will work
fine.
Do invest in a good dummy load too, a must !

The 530 may need to have a wire cut to get you on the warc bands.

Find a local ham to check it out for you and teach you how to tune it up
correctly,(drive plate load)
this will save your final tubes and get top performance from the radio.

BTW, I own a ts 520 and the 530s.

borus and David,

If you want to believe people who have never owned one of these great radios its your call. But I have owned nothing but VX150's and it is a great radio. And if you can get them for $80 all the better.

I highly recommend this model radio and have had no problems with them for over 2 years. I've got nothing but good reports about it's output signal even at the .5 watts setting.

Believe those reporting things they hear or believe those who actually have and use them. I'd buy nothing but this radio due to the experience I've had with it.

I've been quite happy with mine for a variety of uses. My only issue
is that I wish they made a dual band version of it.

As with any HT, the stock rubber duck has limitations, and you may
want to upgrade to a better antenna, like a flexible 1/4 wave ideally.

Happy trails,

<< They did this with the dual-band HTX-245
when they came out with the dual band, more features & higher power
HTX-420. The HTX-245 was marked down from 239.95 to 169.95. The HTX-420
is 269.95. I almost want to wait til it goes down, maybe to 190 or so
unless they have limited production. >>

Dean-

You may have missed the point. A guy at the local Radio Shack told me that they had discounted ALL ham equipment to clear them out of the system. Yes, some prices may drop again, but they may no longer be available by then.

If there is a model you are interested in, your local store can use their computer to check availability at other stores. But beware: the last one in the store may be one a customer has returned with problems. I obtained both the HTX-200 and HTX-245 ($50, $70). The HTX-200 had a bad speaker which Radio Shack repaired. The HTX-245 "squawks" from some kind of receiver self-oscillation. I'm not sure Radio Shack knows how to fix a problem like that!

I don't know if this will help but go to http://www.irlp.net/ and then to the active node status page. I did this and got all the nodes for Florida. It looks like you maybe out of luck but there maybe one in a near by town that you can access. You may also try bringing up node 1000 in Vancouver BC and calling for David, VE7LTD. He is the inventor of the IRLP system and each node has to go through him to get on the system.

Source record: 33271

Greetings,

I am in need of the schematic for the MFJ-405 keyer. This is an early model of a curtis chip based keyer from MFJ. It had a single paddle built in. I believe that the MFJ-401 is the same circuit but no built-in paddle. I would gladly pay for a copy of the schematic or possibly someone could scan me a copy. MFJ no longer list this manual.

Thanks in advance,

Glynn .. also k4rki@arrl.net

<< 8130 KG4SVX Palm Bay FL USA 145.5600 IDLE 119 mins >>

WG & TS850 Guy-

I don't have the vaguest idea what the IRLP system is, but Port Saint John and Merritt Island are about 40 miles east of Orlando adjacent to the Kennedy Space Center. Palm Bay is about another 40 miles south, probably 60 miles from Orlando. These are the closest ones in the list on Two Meters.

Where did this comment come from?

Yaesu, GigaParts, the Yahoo forum and about a dozen individual web
sites all report problems with the 'finals' on this unit.
I think I have done my homework.

I'm not going into what they all said but Yaesu says this reoccuring
problem is caused by people who operate at too high voltage and over
heat the final.
The operaters who have replaced one or two finals say this is not
true. I don't have the specs and don't own one yet but it seems the
radio is to operate 7-13v, I think. The victums say they operate at
12v and never exceed that voltage, let alone 12+.

A strange thing is that owners have reported almost 5 watts output
with <10v. I find it odd that anyone would operate above this
voltage that produces full rated wattage of the unit. Unless they
need to keep their hand warm.

I have been unable to get one of the victums to answer this but if
heat buildup is causing problems as Yaesu says, how many were using
the radio with a nice insulating leather case?

Generally I have found warnings NOT to use this HT on packet.
OR to talk for extended periods.

>But I have owned nothing but VX150's and it is a great
>radio. And if you can get them for $80 all the better.

I have used nothing but Kenwoods, even on packet, and have never heard
of the problems I read about with the 150.

1795. HTX-242 audio problem

Newsgroup: rec.radio.amateur.equipment
Date: 2003-02-18 02:17:31 UTC
From: William <bcrann@cablerocket.com>
Message-ID: <3e519794$0$17165@fountain.mindlink.net>
Source record: 33277

Anyone ever have a problem with the audio on the 242 sounding like it was getting audio feed back or an echo? Everything seems fine when the audio is low, or if I use an external speaker. The louder you turn up the volume the worst it gets. It sounds like the speaker is in a tin can. I tried another speaker but it didn't seem to fix it. Thanks for any suggestions.

Bill

1796. WTB: affordable HF trans.

Hello guys,I am writing this add to find out if one of you would have a HF transceiver I could buy for an affordable price...my work situation is not too good at the moment....If you have a trans. and would agree to sell it for an affordable price...please let me know.......Rick

1797. ELECRAFT K-2 For Sale

Newsgroup: rec.radio.amateur.equipment
Date: 2003-02-18 02:48:04 UTC
From: "Sharon, Innkeeper - The Mockingbird Inn" <sandbird@netdoor.com>
Message-ID: <8GSdnTToXKZ-A8yjXTWcqQ@netdoor.com>
Source record: 33279

K-2 in beautiful condition and expertly wired. Works 100% on all
bands/modes.
Has SSB option, 160 meter option, Heil Mic option audio filter option and
noise blanker option.
The radio price as configured would be $895 in KIT FORM. (see elecraft.com
web site for details).

Figure at least 100 hours of assembly & testing than maybe you'll have one
as good as mine if you are expert at soldering.

Note: (see elecraft.com for extensive Independent Rig Comparison reports -
ARRL Lab, CQ Magazine, QEX Magazine, et al)

Manuals in excellent condition included.

I will take $800.

The VCO circuitry might be getting microphonic. If you tap on the radio while receiving a strong unmodulated carrier do you hear a microphonic sound? If so some component in the VCO is loose, probably a shield or inductor.

I haven't had time to pursue it but a rig that could X-band repeat between HF (20/40/80 meters) SSB and UHF/VHF FM would be very handy for ARES/RACES Op's. There is too much QRM/N around many Emergency OP's Centers (EOCs) to operate HF SSB from them directly so we have been relaying messages to a team member at his home station then he passes it on to the state EOC via the HF Emergency Net or to field operators who cannot hear VHF/UHF simplex using NVIS. A X-band repeater might speed traffic and minimize mistakes by bypassing the human link. Of course a control operator would still be required.

Thing is the CB craze has created so many inexpensive 10M rigs that converters are less than popular. You can usually buy a Radio Shack all-mode 25 watt rig for well under $100US on ebay.

We did that once at Icom. We had a 475 on UHF connected to the 781. We used to walk around Icom chatting on 10 meters with UHF HT's. One employee also built a small device with a PIC processor that would disconnect the two transceivers if someone spun the dial. He monitored the CI-V output for that. It worked great, just a little audio matching was required and some way of making sure no one would tune you out of band.

I don't have this particular mast, but I have many similar ones. Most are quite a bit shorter than the MFJ, but I do have one is the same size (I think).

If you are a fisherman ... think "crappie pole" and you will know what this mast looks, and acts like. Not only is it quite flexible, the higher it goes the thinner (and more flexible) it is. The top most section is about as thin as your pinky finger (or even smaller)

I don't use mine for antennas so I can't help there, sorry.

The DX402 is one of my least favorite radios. Not that its bad. Reception
is okay and the sound is good. But I dont like the tuning knob. It has a
loose feel and it quite easily tunes off frequency by brushing it slightly
with a fingertip. Brushing anything against it causes it to change
frequencies.

If you can find one at a good price and need SSB it might be a good buy.
I would prefer the DX396 or DX399 or DX398 though. It all depends on what
featues you want.

Message-ID: <3e52e050$0$43946$a0465688@nnrp.fuse.net>
Source record: 33153

Hi-
I have an old Kenwood 732A. I fired it up the other day to find the first 2 digits of the UHF display missing. Anyone have any quick ideas for a repair? If not its going in for service...
Thanks.
Bill

1823. Re: Radio Shack Ham Sale

I recently spoke to a salesclerk here in NF, Canada. He said that radio shack
was going to discontinue carrying ham gear in the store (except for cables, etc)
and only sell it through mailorder/website.

I also stopped in at the local 'Shack just browsing around. Picked up a
"clearance" 13.8v 25-amp switching power supply for $60. Regular $119.
Stock # 22-510. Clerk also informed me that they were getting out of the
Ham business at walk-in stores. Only had a couple of CB's left on the
shelf - no ham transceivers.

An excellent description of it, Richard. It is indeed a telescoping fishing pole-like thing (without the fishing line loops). And, like you said, it is extremely flexible when extended. In fact, it offers no support for anything other than the very thinnest wire antenna (no beam or vertical). And the top section is indeed smaller than a pinky finger - mine was about the size of a pencil.

I finally gave mine to a fisherman. I went back to my old favorite - the aluminum telescoping poles used to wash windows. These poles are much stronger, lighter weight, and can be purchased in lengths up to about 40 feet. I've even used one of these (26') to support a small beam and rotor on field days.

I have for sale a very nice Hammarlund SP-600-JX26 Communications Receiver. It works great, no mods, and I have the original manual. No cabinet. It does have the bottom cover. Digital pictures are available for serious potential buyers.
The receiver is heavy and I am not crazy about shipping it, so preference goes to those who will come and get it in Abilene, Texas or I can meet someone within a reasonable distance of Abilene. Price is $425. Thanks,
Charlie Hugg, K5MBX

1830. which kenwood?

Newsgroup: rec.radio.amateur.equipment
Date: 2003-02-19 08:48:22 UTC
From: Chris Ross <pragmatist@kc.rr.com>
Message-ID: <3E534512.1F20324B@kc.rr.com>
Source record: 33161

I've been a tech for about 9 years now and am ready to move up to General Class. This coincides with the fact that I own my own home now and can put up an antenna, where I never have been able to before. I am looking to get a hybrid kenwood HF rig. I have used them before on field days and like their performance and they seem to hold thier value well. Price is also somewhat of a consideration. I'd prefer to have one with the digital readout built in. A friend of mine had one, I believe the 530 or 520, and had the VFO, digital readout, and speaker all as seperate units hanging all over. I'd rather avoid this sort of setup. I know the different models have different power output but I'm not really concerned with that. I'm looking for my first HF. Any idea of which rig I should be on the lookout for and what I should watchout to avoid?

thanks,

Chris - KB0MLR

Source record: 33162

I would opt for the Kenwood TS-830S -- one of Kenwoods finest. Built in 117V
power supply, Superb Variable Bandwidth Tuning, has WARC Bands, Tuned RF
Amp, lots more.
Would avoid TS-520/530 - no WARC bands.
TS-820 (No WARC Bands as I recall) although OK just isn't on par with a
TS-830

For TS-830S, See URL's:

Chris,
I started with a TS-680S in 1988 and haven't looked at anything else. The
TS-140 is the same rig without 6m.
These can be had fairly priced. The 690 is the same as the 680 but with
higher output on 6m 100 watt max.

Can you please tell me where the ignition noise in a disel truck comes from,
I think you should look for alternator noise instead.

Regards Max

Sure, remove all three PCM computers, simple as that.

Well, Al, thanks for that most unhelpful answer. Shitbricks like yourself is why the hobby is dying. Thank you for your lack of insight.

Thanks for the mostly good posts and excellent emails. I have narrowed the field considerably and have just a few models to decide from. I really do appreciate the help.

Thanks,

Chris KB0MLR

1848. RF in the shack

Newsgroup: rec.radio.amateur.equipment
Date: 2003-02-20 00:09:42 UTC
From: Scott <"NS scottj"@istar.ca>
Message-ID: <P1V4a.69$%n4.1379@news.ca.inter.net>
Source record: 33180

First, thanks to all of you who helped me to understand the tuning process of the Kenwood 830s. With the help of a tuner, I've got it up and running CW, and have made some contacts.

My antenna is temporary, because I'm moving in two months. I am using a longwire which has low SWR's.

I notice that my computer acted strange when I tuned up, so I shut it off. My bubblejet printer (Canon) makes noise and movement whenever I operate, so I've taken to unplug it as well. All my equipment is on a heavy ground wire which is grounded to the fresh water pipes in the bath (next room). I get no "fuzzy feelings" or shock from any of my equipment when I transmit. I am, however, on the second floor.

My question--is the computer reaction normal, or is it a sign of too-high RF in the transceiver area. The printer is about 3' from the transceiver, and the comptuer about 2'.

Thanks for your help.

There's a nice article that addresses this sort of problem at the League webpage. Check out http://www.arrl.org/members-only/qst/doctor/comments.html?qid=99&nextq=Q2 . I don't know whether it will suit your particular application, but it's a nice place to start.

Your computer and other equipment is not happy with the RF. You are doing
good by unplugging it. Until you get a antenna and feedline outside and
away from the equipment you can expect the same to happen. Since you are
saying its temporary wait till you get situated.

For more on the TS-830S see URL:
http://www.geocities.com/om6523/

Sounds like you have RF in the old shack. May be a result of end feeding the random wire at a voltage point.
Try a dipole or vertical. Or change the length of the random wire so it is current fed. (resonant odd 1/4 wave multiples) your mileage may vary -- but has worked for me.

1852. Re: Yaesu FT-2600 Advice Needed

Newsgroup: rec.radio.amateur.equipment
Date: 2003-02-20 00:42:27 UTC
From: jweiner@softstar.com
Message-ID: <92cd4545.0302191642.62872508@posting.google.com>
Source record: 33186

One last Post...

The Solution..

I worked with Yaesu Tech support today Jerry and Michael.

They were a big help.

The bottom line was the radio was not aligned correctly at the factory.

I think the person on the assembly line took a break just as my radio moved to his workstation.

I performed the adjustments specified by Yaesu and the Service Manual..the service manual was missing a lot of steps...but Michael from Yaesu ...filled in the blanks for me

It was a software adjustment that was easy to do after I constructed a simple jumper cable.

The radio is now meeting power specs at all power settings.

There was no problem with my antenna, power supply, or SWR.

Thanks again to everyone for their help

Actually these radios had the features built in. So either he preferred to
have these external (using the connections on the back) or his radio wasn't
working right and he was using external components to compensate.

Oh, I forgot to mention that the frequency of the pulsing noise is directly proportional to the engine RPM. Therefore, I don't think it's the fuel pump. Maybe the fuel injector solenoids?

Another great used radio at often bargain prices is the TS-130SE. It is SSB and CW only but does have the WARC bands. For whatever reason, they did not include the 160 meter band.

The TS-430 and the TS-440 are good all-mode HF radios that also sell reasonably used. Note however that on the 430, the FM board is an option not standard. Not sure about the 440.

Another nice rig is the TS-50. New it is under $700. It is an all-mode HF rig.

None of the above have 6 meters.

Hi Rudi,
I've heard that the cause is the injection computer and can be helped
with ferrite beads on the output wires. I haven't had time to try that yet,
but my FT-100D's noise blanker eliminates it on all but 40m, where it is
reduced to the extent that I can hear the 40m swap net on 7240. Hope this
helps.

If you have ignition noise, you do not have a diesel truck.

Most likely the noise is coming from the fuel pump and alternator.

Hey group,

I need 2 connectors ... a 7/16 DIN Female and an N female connector for
LDF6-50A (1-1/4 ") Heliax

Also needed is 2 - N female connectors for LDF5-50A (7/8") Heliax

And... I need some Mastic weatherproofing kits.

Anyone have any of the above?

Thanks

Dave

Scott,

The problem is with the end fed antenna. Your "ground" is not a ground
at RF and the case of your radioand tuner are now part of the antenna.
The line ground connection is now providing RF to the line ground of the
printer through the house wiring and is generating data type signals in
the printer. Since your location is temporary, try connecting a quarter
wave of wire to the case (ground) connection of your tuner. You will
need a separate quarter wave wire for each band you want to use. The
other end of the quarter wave should not be connected to anything. This
will as least provide a low impedance at the case and will reduce the
level of case RF. The ideal is to use a balanced feed antenna such as a
dipole.

Hello everyone....I am selling a balance of tubes from a radio shop who closed a few months ago because of the owner sickness...there are about 400 tubes all in their boxes.....they are mainly radio tubes (said he had barely nothing to do with TV.) about 85 to 90% of them are NOS....according to the prices of the tubes these days...I think that .60 - .70 cents each would be a killer deal....so I'll ask $275.00 plus shipping for the whole lot...(picture of the whole lot available..let me know)...for any question..feel free to contact me.....thanks....

1865. Radio tubes inventory left to liquidate.!

Hello everyone....I am selling a balance of tubes from a radio shop who closed a few months ago because of the owner sickness...there are about 400 tubes all in their boxes.....they are mainly radio tubes (said he had barely nothing to do with TV.) about 85 to 90% of them are NOS....according to the prices of the tubes these days...I think that .60 - .70 cents each would be a killer deal....so I'll ask $275.00 plus shipping for the whole lot...(picture of the whole lot available..let me know)...for any question..feel free to contact me.....thanks....

A list of the tube types would help.

The fuel injectors are an established form of noise, 'just like spark
plugs', in diesels.

When my display went bad, I ordered a new display. I don't recall the exact site on the internet that I ordered it from, but I found it by doing a Google search. The repair took about an hour, and is probably not for the faint at heart. It involved completely disassembling the faceplate. There was no soldering involved.

On the other hand, if you open up the faceplate and disassemble it down to bare LCD glass, there are four set of contacts on the circuit board and matching sets on the LCD glass. There are four pieces of rubbery material that fit between the circuit board and the LCD glass. These have a dark line of conductive material that carries the signal from the circuit board and the LCD glass. Try cleaning the contacts on the board and the top part of the rubbery material first and carefully reassemble. If that does not work, pull it apart again and clean the other side between the rubbery stuff and the LCD glass. My guess, since you only have 2 digits out, is that only one set of contacts is the problem. In fact it is possible that it is just loose. At any rate, you will be no worse off than you are. If you kill it, you just have to order a new display anyway. it comes as a unit with the LCD and circuit board all assembled.

Good luck!

That may well be, however it is not "ignition" noise.

I have an old Yaesu FT-277 which I use as a mobile rig. But I have a problem with the LF-stage. Some time (5-10 minutes) after I have switched the power on, the speaker sound nearly disappear - it's very weak. Instead I hear some weak locally generated sounds and after some time (from some seconds to several minutes) the sound level (with a sharp and loud click) comes back to normal. I believe that the problem is that the circuit on the LF-card goes into self oscillations. Does anyone have some tips on how to cure this problem?

Most modern light diesel trucks use solenoid injectors they make
lots of noise that sounds just like spark noise. Since the injection
of fuel during the compression cycle causes ignition in a diesel
engine thus it could be considered ignition noise.

You call yourself "Dr." might I ask Dr. of what? Just interested
in the relevance to antenna matters, if any.

So, whatever your name is.....;^)
Can you put grounded, steel cans around the solenoids?
I think I've seen similar problems in ignition systems where the coil was
not shielded.

1877. High performance antenna tuner

Newsgroup: rec.radio.amateur.equipment
Date: 2003-02-20 14:37:14 UTC
From: Heinz Bolli <heinz.bolli@hbag.ch>
Message-ID: <3e54e798_5@news.bluewin.ch>
Source record: 33111

Hi all

We are constructing a new antenna tuner/matchbox especially for symmetric antennas. The most important featueres will be:

- Matching of symmetric antennas
- 1.8 to 30 MHz
- High impedance matching range, capability for compensation of high reactive loads. (50 Ohm to up to 3000 Ohm +/- 3000 Ohm reactive)
- High power handling (up to 2 kW)
- Remotable and/or automatic function
- Working in Transmit- AND Receive-Mode (with ICOM-Transceivers)
- Matching unit for outdoor mounting (near antenna feedpoint)
- Control unit for indoor use (near Transceiver)

We are looking for techincal interested amateurs for broad field tests. We offer a absolute high quality unit from our pre-series for a fair price.

Interested? Then contact immedialtely:

There was this same thread over on rec.outdoors.rv-travel a while back.

Noise source is definately the solenoids, or rather the pulses that
drive them.

Don't recall the fix but any of the "outlaw" CB shops found near truck
stops prolly knows what to do. <grin> Ain't that awful!

1881. CB antenna for 10M

Newsgroup: rec.radio.amateur.equipment
Date: 2003-02-20 16:06:21 UTC
From: cprstn54zz@att.net
Message-ID: <3e54f983.115399406@news-server.optonline.net>
Source record: 33113

I just stocked up on some big Radio Shack truck-mount CB antennas
($0.97 on clearance, #21-941C) that I intend to trim for 10M. Maybe
make a dipole from two of them.

I am trying to figure out how much power I can output into them.

The FCC Rules for CB radios now provide:
RULE 10 - Power Output
{A} Your CB station transmitter power output must not exceed the
following values under any conditions:
AM [Amplitude Modulation] - 4 watts carrier power [CP]
SSB [Single Side-Band] - 12 watts peak envelope power [PEP]

(1) These antennas are pretty beefy for 4 or 12 watts. Also, they are
very old stock. Was this always the rule for CB radios? I think
there was a change in 1996. If so, what was the old rule?

The solenoids are probably already in steel cans to survive the pressure. The noise is not from the solenoids. The noise is generated by the fast semiconductor switch which drives the solenoid, and radiated by the wiring which runs from whichever computer contains the switches over to each solenoid.

If the manufacturers followed good electrical practice by putting all this electronic junk in proper shields with the power connections properly bypassed, there would be no RFI nor problems in the other direction where your transmitter causes automobile malfunction. But, If you modify it, your warranty probably isn't worth a plugged nickel.

Ken the rules have always been the same. I was KIY9786 way back in 1973 when you actually had to have a CB licence. Its what got me into ham radio in 76. The antennas usually are over designed as they love to run AMPS on CB even though its Illegal. The MFG's know this. Ive used CB antennas with 100 watts easily on 10 meters. If your going to run more Id check the antennas specs first.

If you really care to know, rather than post your potshots from Mindspring as No Name, simply ask and I would be pleased to answer your question.

Your remarks border on slander and you have until March 1, 2003 to desist or legal action will follow.

These hybrid rigs are a good bargain. The TS830 is a very nice rig, as another poster pointed out. It has digital readout and the WARC bands. It also has nice features like IF notch, adjustable IF bandwidth (really nice for PSK31). The TS530 is the same radio without some of the nice features. The TS820 and TS520 were the previous generation and have no WARC bands. The 820 had both digital and analog readout. The 520 was probably the one you used on field day with the digital readout in a different box. All four radios have an external VFO.

You may also consider the older Yaesu FT101 series, although only the last few used the 6146 tube in their finals (all the Kenwoods did).

Hope this helps,
Tom

1890. PS-430 6-pin jack proper voltage?

Newsgroup: rec.radio.amateur.equipment
Date: 2003-02-20 20:23:31 UTC
From: Joshua G Senecal <senecal@mapson.cs.ucdavis.edu>

Source record: 33122

Hi all,

I have a PS-430, and I'd like to measure the voltage on the different pins on its 6-pin power jack. Trouble is, I don't know what the normal voltage is for each pin. Assuming I'm looking at the power jack with the locking clip on top, can anyone tell me, what the measured voltage should be for each of the six pins?

Or can you point me to a web site that has this information?

Thanks!

-Josh, AE6IQ

Unfortunately, Radio Shack does not have any specs for it on the
blister pack or on-line, and my email to them has gone unanswered for
three days.

Even when RS does answer, it appears to be from a person with no
knowledge or understanding of anything.

I guess I will let the wattage build until the loading coil starts to
heat up. If I go too far and it loses its smoke, I have a few in
reserve . . .

Lowe HF-225 Europa, keypad, original operators manual,
original service manual and Lowe power supply. Works
perfectly. Cosmetically and electrically excellent.

This is the "enhanced" version of the Lowe HF-225.
Filters are 200 hz, 2.2, 3.5, 4.5 and 7.0.

Excellent audio and a superb receiver.

$620.00 shipped and insured continental U.S.

Legal action? Come down from out
of your gum ball tree and catnip!

75% of the time that e-Bay has pulled Ham/CB/Radio auctions
it is for numerous complaints against the
Sellers for not shipping earlier auction
products won, non-payment of fees or fraud.

E-bay does not think ham radio
as some type of a special group worthy of
merited special attention - apart from the fact that
ham and CB related equipment sales usually are
in the top-5 categories for complaints of
Seller fraud filed to e-Bay from buyers.

Bottom line: When you bid on anything on E-Bay
be DAMM SURE your Seller is on the level and
IS NOT one of these (former) "traveling hamfest bum gypsies"
we used to see set up in the flea market at all the hamfests
trying to pass off the same overpriced non-working junk
to suckers or newbies. Many of em have abandoned the
"Hamfest Flea Market Circuit" and now sell exclusively on e-Bay

AM-6155/GRT-22 FAA Surplus Linear power amp, Specs: 225-400MHz, 50W out (conservative) 10W in, Eimac X651Z/8930 final, extensive metering, can be converted to 2m, 220 or 432, rack mount 7" high, 80 lbs, ITT (model 3212), Part of AN/GRT-22. This Amp uses Emiac X651Z/8930 in silver-plated cavity-drawer; 175-turn TUNE counter dial. Main chassis has solid-state power supply and buffer amp/mulitplier; panel meter monitors voltages. Requires 105/120/210/240 VAC 50-400 Hz and +20 V req 60 ma. +20 V keyed; 7x19x18.5, 80 lbs shipping weight. The HV Supply from AM-6154 is Loaded with GREAT parts to include a 1752V at 270ma transformer, 8HY 300ma choke, 100K ohm 95 watt resistor, 2x5mfd 3KVDC capacitor, & rectifier circuits card. Most hams use these amps as a 2m or 220 Mhz or 432 Mhz Linear. After conversion, the output power is approximately 400 watts. One ham has used a 4CX400A (available from Svetlana)to raise the output power to 450 Watts. Do a Google search of AM-6155 and you will find many references to conversion information. Used - Excellant Condition (NOT TESTED) but sold AS-IS.. Email if you have any questions. Buyer will pay shipping (approx 90 lbs) from zip 31088 and a packing charge of $20.00. I will ensure the item is packed to survive the trip!

Routing the long wire all the way into the schack is not a good idea!
This part of the LW may radiate and strong RF fields will couple to
all electrical wires there.

Instead, use a RG58 coax from your tuner to a point outside your
schack. The more far away, the better. At this point, connect the LW
to the center conductor and the coax screen to a ground rod (using as
short lead as possible). About 1-2 m backwards from this point, clamp
a couple of ferrites onto the coax. Or wind the coax 5-10 turns
through a T200 ferrite ring. Repeat this again further down the coax.

This will reduce propagation of strong RF currents, coupled from the
LW to the outside of the coax, from reaching the schack.

Try running the search engine inside the RS website. I have had good
results pulling up manuals, specs, service info, etc.

Their search engine is a little quirky, though. It takes punctuation
literally where some ignore it, and there are glitches in their
keywords. You should search on 12-345, as well as 12345 for catalog
number.

I have seen CB antennas "rated" for 5,000 or 10,000 watts, (larger
than many commercial broadcasters), on a service limited to 4W AM
output.

Happy trails,

While I cannot condone the language used by "Chris", you are out of line to assume that he is ignorant. I know several long term techs who have done a tremendous amount of personal development in the VHF/UHF/SHF/Microwave realm. The people that I know are very knowledgeable about the antennas, propagation, equipment, etc in this area. They have worked the amateur satellites. They know more about these particular aspects of radio than many of the Extra class operators that I know. To assume that a technician is ignorant simply because he is unfamiliar with the HF realm and/or has taken his time to upgrade is not justified.

When I said all the junk in shielding, I include the wires to the injectors. We have the same problems with Adjustable Speed Drives (ASDs) on air handlers in radio receive sites. ASDs will tolerate no change in impedance at the output which drives the very noisy cables from the controller to the motor. Have to thoroughly bypass the input power, and carefully shield everything else. Fortunately, (knock on wood) so far, no plastic cased motors have shown up, but I expect that next. Really annoys the electricians when we make them go back and replace a fair amount of the PVC and Liquidtite with real EMT with the correct connectors. The oversize Hoffman boxes are no favorites either. That Liquidtite is a real fooler. Steel spiral which looks like an inductor since they have managed to insulate the turns from each other. Fortunately there are still some steel braid alternatives which combine flexibility with an acceptable level of shielding and conductor protection.

shrug

Dimwits like that just make me want to better myself even further. Here comes Advanced. I'll go work ALL the HF bands with my nocode tech call.

I don't recall ever seeing his call so he's probably not even liscenced. Or just some old coot that only speaks to those that are worthy, ie the other 2 coots with 1x2 calls.

Al, sit and spin. You have nothing to offer and you have nothing comin.

Yes indeed it was helpful. The consensus seems to be the 830 with honorable mention for the FT101. I guess I have enough information to start looking more carefully at the two and see where the deal is.

Thanks much!

CR

1908. Need help: EVE, VX-5R and WinXp

Newsgroup: rec.radio.amateur.equipment
Date: 2003-02-21 03:52:37 UTC
From: vhfradiobuff@aol.comspamme
Message-ID: <20030220225237.12728.00000016@mb-fe.aol.com>
Source record: 33139

I am running Win XP and I tried using Eve with my VX-5R and it's not working properly. If I trying reading from the radio, it works great. I can also send the file back to the radio just fine. If I try modifying the file or sending a file that's already on the computer, it won't let me do it. I get a timeout error in that case when sending.

Any ideas what may be wrong? Is there a compatability problem with XP? I also had the same problem with the ADMS software.

I did some research on this very issue and heard that most of al of the Radio Shack antennas for either ham or 2 meters can withstand about 100 watts.... I had run across a similar deal a while back and wanted to check before investing in them. I wouldn't dump more than that in them though as my own opinion though.

1912. WANTED - Two VHF Low band mobile radios

Newsgroup: rec.radio.amateur.equipment
Date: 2003-02-21 07:11:06 UTC
From: Dave Schmidt <n9nlu@NO_SPAM_charter.net>
Message-ID: <v5bk99glfcc8d0@corp.supernews.com>
Source record: 33143

Hey all,

I'm looking for a couple VHF low band mobile radios. Something that can be programmed into the 6M ham band. Something cheap also - like $50 a radio at most so some old dusty 2 channel VHF Low radios would work just fine....as long as they power up and function correctly. Motorola is prefered since I have programming wares for them but may consider other radios if programming is available (simple 2 channels)

Thanks

Dave

Date: 2003-02-21 12:41:08 UTC
From: marcus_harton@hotmail.com
Message-ID: <7bc24e8d.0302210441.7c398470@posting.google.com>
Source record: 33144

I'm on the verge of buying a TM-G707a. The programming software looks neat, but I've got a question before I buy or fabricate the programming cable.

Does the faceplate need to be attached to the radio for the programming to work? I plan to install the rig in my car, and I don't have a laptop. I don't think I'd want to uninstall the whole radio to haul it inside to the desktop computer.

Thanks for any info you can offer.

1918. Icom 25A Power plug?

Newsgroup: rec.radio.amateur.equipment
Date: 2003-02-21 16:07:21 UTC
From: k9uw@msworldnet.com
Message-ID: <b44e3c74.0302210807.479e6d76@posting.google.com>
Source record: 33052

Greetings!
I've recently obtained an Icom 25A (no manual) and am a bit perplexed by the 3 pins in the power plug. I got just the radio with the power cord's pigtail that ends in a 3 pin connector, but the portion that would run to the battery or power supply is missing.

There are three wires, one for each of the 3 pins: red, black and white. Red and black are easy enough, but what's with the white wire?

Anyone have an answer to this mystery?

Thank you, in advance, for any replies.

You might have alternator whine or noise from body panels not grounded together; maybe even stastic noise from wheel bearings. Best bet might be a Radio Shack Noise Filter on the power leads to the radio. There are two versions: 10 amp [R-S # 270-051 @ 14.99] and 20-amp [R-S # 270-055 @ 19.99]. I've used both the 10-amp [on Honda Aspencade M/C with Icom/Kenwood/Yaesu 2M rigs and the 20-amp in Dodge Caravan with Yaesu 2M radio. Blocks 99% of noise I hear when I take the filters out of the line.

It'll prolly be OK. After all CBrs all run 500 watts from what I hear <grin>. If it does fail, get one of the "killer-watt" rated Firesticks at a truck stop. I like them cuz they're so easy to trim to 10m.

But exercise caution: I was feeding a short one mounted on a cab-over camper with about 250W. I was listening to a buddy as I pulled up under the drive-thru canopy at a bank. When I hit the key to "r" him there was a pop and bang and the teller's PC tripped off line. Luckely I'd finished MY transaction and could slink away. Found the end cap and about an inch of fiberglass smoked when I got home.

True, but please understand that the majority of French wanted it that way. We've somehow built this myth in which Hitler seized control od Germany in some kind of coup then used it's huge modern army to beat down stiff French resistance. Truth is Hitler was elected by a majority of Germans, and that France had a far stronger army but gave up essentially without a fight. Only a brave few went into exile with DeGaul or stayed behind to resist and even they despised the US and Britian for sinking the fleet promised to Hitler.

Looking for a mobile unit to run the soundcard hf digital modes via a laptop. I am looking at the FT-897 which seems to be a all around portable rig. Would like some input on what other people are using? Also are there any mobile rigs with filters that are not mode dependent ie cw and ssb? Thanks..

Hi Per,
If you know anyone going to Dayton this year have them buy whatever
radio you want. It will be below the sale prices and most of the
vendors will ship it free or for a fee. It would be worth checking it
out if you have someone you trust going to Dayton.

From: clutch@lycos.com
Message-ID: <v5cqo2oht6ps36@corp.supernews.com>
Source record: 33060

Hi,

I want to replace the failed ni-cads in the 9.6v battery pack for my FT-50r and thought that before slicing and dicing away at case, I'd ask for tips from those that have done this. Groups.yahoo.om didn't turn up anything but it could be my lack of skill at search terms.

While I have your attention, when the battery pack was working, plugging it into the charger (wall brick), showed 15.6v which seemed a bit high. Does the radio step it down to avoid cooking ni-cads or should I purchase an external charger? If so recommendations.

The while wire is memory back up. Attach 9 to 12 volts VDC between the white wire and ground to keep the memories alive when the radio is powered off. If you desire to use a battery you might be best to make a quick current draw measurement to properly calculate the battery requirements. I think you will find current requirements in the millie amp range.

>programming to work?

It doesn't need to be directly attached... the remote extension cable
can be used.

I do think you need to have it attached in one way or the other. If
you don't, I don't think there's any way to turn on the radio to
program it.

The programming cable does _not_ plug into the faceplate - it plugs
into the radio itself.

> I plan to install the rig in my car, and I don't
>have a laptop. I don't think I'd want to uninstall the whole radio to
>haul it inside to the desktop computer.

You might be able to get by with a long serial-port extension cable
from your PC out to the car, and then attach the programming-
interface cable to this. Seems "iffy" though.

Certainly. We had no quarrel with the elected government of Germany,
which was bending over backwards to be friendly. Should we have attacked
them for merely taking back German-speaking territories taken from them
just a couple decades earlier? -- at least that was the logic at the
time. And the correctness of that attitude became even more apparent
when the French left the poor Brits who'd jumped in to help them holding
the bag by surrendering without much fight. In hindsight perhaps it
would have been wiser to let Hitler have France then slug it out with
Stalin while we got rich equipping both. Besides, German is easier to
learn than French ... (c:

The digital freq display is somewhat erratic on the low end of 3.5 MHz band.
It looks like someone has tried to "align" the bandpass filters.
Question 1. What coil pair is operating on what band in the bandpass filter
assembly? The coil cans are numbered T30 ...T45.
I assume a pair of coils is used on each of the 8 bands in this radio.

Question 2. What frequency is going through these bandpass filters? Is it
the signal frequency on each band or something else?

Question 3. What is the correct RF voltage at the connector J06 (signal
output to counter)?

Any help appreciated. Thanks in advance!

Unless you are just doing it for the fun of it, you should get a GE Mastr ll
mobile rig and a cheap controler of somekind. The GE can be bought for
about $ 50 or so and use the controler of your choice. YOu will have a much
beter repeater.

Bjorn:

You're going to have to use a signal injector starting at the front end and work toward the audio amp to find the defective component. IN THE ALTERNATIVE YOU MIGHT USE a "PRINCESS" HEAT GUN WHich has a opening of about 1.2 cm and might be small enough to do a part by part test for heat/cold intermittent open or resistance/impedance change. TAKE YOUR PICK.

SORRY ABOUT UPper case. need to change keyboards.

Probably good for at least 50 watts. My '00 catalog shows a quite small diameter center loading coil. There was also a 2000 watt antenna [21-804] which uses 10-ga wire in its black loading coil. You might consider cracking open a coil on the 914C and measuring the coil wire diameter. Some of the Amateur Radio Handbooks have a table or graph showing the power capability for various sizes of coax based on the inner conductor size. Last catalog the 21-804 was in was 2001. See if your dealer has any of those for ninety-seven cents!

You guys finally got me to wondering, I'm
a high school drop out with two college degrees(bachelors and masters in
education).
Since any of you of the several disciplines with typical Doctorate degrees
may be identified as Doctor, why is it out of line if we underachievers with
Masters degrees want folks to call us Master. Hunhhhh?(g)

Nothing wrong with calling you 'Master'. If you check the development of
the english language usage of 'Mister' you will find that it is a
corruption of 'Master'. Where 'Master' indicated completion of higher
education.

That's the extent of my knowledge of 'Master'.

Any linguists on the reflector?

Motorola GP2000 V or U, complete pkg.

I have several new GP2000 V/U 99ch. radios for sale. They are NOT the
PRO2150 radios, but the true GP model.
Included in the price:
-Radio, batt, antenna, spring beltclip
-DESKTOP drop-in standard charger
-Comprehensive programming instructions
-Free PC programming cable (makes putting in Alpha tags a breeze!)
-Free Mystery Gift

Total price is $265 with FREE shipping CONUS! <PayPal accepted>

Now available: ADD RAPID CHARGER or SPARE HI-CAP BATTERY: $45 ALSO,
Comprehensive keypad programming instructions available on CD in good
quality .pdf format!

Email if you need more info... this package makes the perfect 2m or 440 rig!
(radios are NOT approved for use in the commercial bands!!)

Thanks!
Randy

And keep enemies lists and compile records to blackmail just about anyone
that did not agree with him - ah yes, J Edgar was quite a laudible figure...
He controlled president after president and politician after politician with
his knowledge, simply blackmailing them into submission.

1962. Re: What's Ebay's privacy policy? Check this out ...

Newsgroup: rec.radio.amateur.equipment
Date: 2003-02-22 10:42:15 UTC
From: Monty P <flying.email@my.mail.org>
Message-ID: <b37k69$pn8$1@news.chatlink.com>
Source record: 33093
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.swap

Ebay has a lot of unpublished policies, for example I sold an item to a guy who later turned out to be a manufacture of illegal power amplifiers.

This guy attempted to defraud me by claiming I sold him defective material. I had pictures of the item as shipped and had insured it for the amount purchased plus 10% to cover shipping costs. Once the shipment arrived he attempted to stop payment on the Postal Money Order he sent me. After the Post Office refused to refund, he made demands that I give his money back without returning the item to me, he refused to file an insurance claim with the Post Office saying, "I would look stupid".

After an extended background investigation by myself and a former law enforcement co-workers we found this guy to be a professional "flim-flam" artist. Meanwhile, Ebay kept insisting I pay him off because the buyer is always right. In the end this man threaten me with legal action which never transpired, as he was afraid of being arrested for fraud by the Postal Inspectors. I worked with the Postal Authorities to clear up the situation by having at least an impartial inspection of the item. The man refused to give it up through the entire ordeal.

In the end even though I did not nothing wrong and subsequently quit Ebay out of frustration with their policies, they marked my closed account as being shut down because I was the dishonest person. The crook with prior convictions and a string of law suits across the U.S. his account is still active and is buying up parts to keep building his high power trash generators. (By the the way this man told he was buying my item to fix a radio religious radio stations transmitter.)

Never trust Ebay, they will do what is in the best interest of lining their pockets with money.

Hey, I ran into this guy too! Said he was doing charity repair work on a religious broadcasting station so did not have much cash. Asked him for station ID and call signs and he provided some. Checked with the stations and they said "Not him again!" Needless to say, the vacuum capacitors never got shipped.

I have for sale an Icom W-32A in as new condition. With the exception of clear tape I place over all of my H/T and scanner display lenses to prevent scratching (easily removed) the radio looks as it did when I originally purchased it from Lentini Communications. The radio has never been in a smoking environment.

The H/T will be shipped in the original box with original manual and quick-reference card. Comes with stock antenna, battery and charger (approx. 1 year old).

I am asking US$200.00 O.B.O.

Please e-mail direct if interested or for further information.

Thank you,
John, KB2COP

From: Andy Knitt <aaknitt@mtu.edu>
Message-ID: <3E57A7E4.6B1BDA0B@mtu.edu>
Source record: 33005

Looking for a service manual or parts layout diagram for the IC-2AT so I can perform the CAP mod. I have the mod info but no picture to look at to tell me which parts are what. (looking for jumpers C2-C5 and inductor L3) Any help would be appreciated.

Thanks,

Andy

1978. Re: Has anyone built a Hamtronics Repeater???

Newsgroup: rec.radio.amateur.equipment
Date: 2003-02-22 20:01:03 UTC
From: "Bob M." <xxxxx@yyyy.zzz>
Message-ID: <QBudnQozwLIFS8qjXTWc3g@comcast.com>
Source record: 33009

I have one of their UHF synthesized receivers (bought built) and built one of their UHF synthesized transmitters. Let me just say that they are NOT Heathkits. The assembly manual, if you want to call it that, is a list of steps where you figure out which parts go where. You need the schematic, parts list, and board layout available at all times just to populate the board. I was missing several components which took a week to get replaced. The unit I built was a newer version than the instructions were written for, so several parts didn't exist any more. The unit tuned up and worked fine, however.

One thing I'd recommend is that you install the parts on the board starting with the shortest and lowest ones closest to the board, i.e. resistors and disc capacitors. Work up from there, as the board will be more stable when you're soldering the new parts.

I also bought enclosures for each unit. They come with either three (3) feed-thru capacitors or a DB-9 connector. Three connection points are insufficient for complete control of the units. Either buy more feed-thrus somewhere else or go with the DB-9 connector.

I also had to buy TWO (2) of their PL encode/decode units, as the units can NOT do both functions at the same time. So I needed one for the receiver and one for the transmitter. I think the ComSpec units are cheaper (and already built), even if you still need two of them.

For whatever reason, Hamtronics equipment seems to want a high level for the PTT and carrier-detect signals. I prefer low levels (i.e. ground to activate), so I had to do some tricky interfacing. The exciter requires two power sources - one continuous that runs the synthesizer and audio circuits, and the other that runs the RF amplifiers. When these are connected together, you end up with a 1/2 second delay when you apply power until the signal appears at the antenna connection. Hamtronics recommends keeping the synthesizer powered all the time and then switch power to the RF amps when you want to transmit. This means switching 14v at about 6/10 amp, probably through a small relay. Not wanting to go through all of this, I fiddled with the synthesizer lock circuit and came up with a novel way to key the transmitter with a very low current ground signal. It's fast, simple, and only required a couple of additional parts to implement.

The receiver and transmitter tune quite nicely and seem to be very clean and immune to spurious signals when enclosed.

It would be nice if Hamtronics included the RCA plug and some coax which is necessary to connect the antenna jacks to the UHF or N connectors on the enclosures.

If you're an experienced kit builder, you should have no problem with the Hamtronics stuff, but you'll need a bunch of good test equipment to get optimal performance.

AIUI yes. It's a trace that's been laid out in a way that gives it
some specified characteristics as a transmission line. You can also
think of the stripline+substrate+groundplane as forming a waveguide.

Be careful there were two mods for the 2AT One just opened the TX from
140 to 150 MHZ and the other moved the unit to 150 to 160 MHZ like the
Icom 2B3.

I don't remember the requirement to mess with any coil for the 140 to
150 MHz mod only the requirement close a jumper by the thumb wheel
switches, bridge a couple of solder pads on the switch circuit board.

With that said it has also been about 2 years since I left Icom
America and likely as many more since I looked at the 2AT cap mod.

Model No. 645L

1 White.....Mic
2 Ground Briad .....Grd
3 Red .....12 Volts
4 Black .....
5 Yellow .....
6 Blue .....
>>

John-

Just a guess based on experience, Black may be power ground which should be separate from microphone shield, or connected to it only at the connector end. Although power and push-to-talk may involve ground, it is a good idea to keep them separate to prevent power supply hum from coupling to the microphone circuit via a ground loop.

Yellow and Blue may be push-to-talk.

Some professional low-impedance microphones have the two microphone conductors balanced, carried together through the shield. I doubt this is the case here, but Yellow or Blue could be the second microphone lead with push-to-talk working against Black.

If you have an Ohm meter or circuit tracer, you should be able to check this out.

1983. Re: PS-430 6-pin jack proper voltage?

Newsgroup: rec.radio.amateur.equipment
Date: 2003-02-22 23:12:16 UTC
From: fmmck@aol.com
Message-ID: <20030222181216.19440.00000090@mb-mf.aol.com>
Source record: 33014

<< I have a PS-430, and I'd like to measure the voltage on the different pins on its 6-pin power jack. Trouble is, I don't know what the normal voltage is for each pin. Assuming I'm looking at the power jack with the locking clip on top, can anyone tell me, what the measured voltage should be for each of the six pins? >>

Josh-

The PS-430 came out with the TS-430S transceiver. I believe its service information is in the TS-430S service manual.

If you can look at the inside of the power supply, you will probably see no wires (or two smaller wires) going to two pins at one end. At the other end, you should see two heavy red wires on one side and two heavy black wires on the other side. The two reds connect together to positive 13.8 volts DC. The two blacks connect together to negative 13.8 volts DC. The negative side may also be connected to the chassis.

The one thing i'm not sure of is whether there may be something connected to the other two pins. An older power supply (PS-30?) had the 120 VAC circuit connected through those pins. The power switch on the TS-120S or TS-130S could turn on the AC for the power supply by shorting those two pins. The TS-430S did not have that function on its power switch, so the wires may not be connected in the PS-430.

Assuming I'm looking at the power jack with the locking clip on top, can anyone tell me, what the measured voltage should be for each of the six pins? >>

Josh-

When I signed off after the last message, I went through my data collection and came up with a diagram of the PS-430. I was mistaken about the power connector wiring!

Two pins on one end are not connected. The two pins on the other end are both connected to Positive 13.8 Volts DC. The two pins in the center are both connected to Negative 13.8 Volts DC, and also connected to the chassis of the power supply.

With the locking clip at the top, the two pins on your left are not connected. The two pins in the center are Negative and the two pins on your right are Positive 13.8 VDC. (Looking at the end of the mating cable, left is positive, center is negative.)

This same connector configuration is used on several of the popular radios from Kenwood, Icom and Yaesu.

By the way, there is an internal 20 Ampere fuse on the circuit board, in addition to the 6 Ampere fuse in the primary circuit.

I have programmed my memory channels on my PC and connect the G71A to
the PC using the PG-4P cable. I turn the radio on and attempt to write
to the radio. It sits there for appx 2-3 seconds and then gets a
timeout. I downloaded the software from Kenwood but do not have
instructions for the software.
Any suggestions?
Thanks,
Ken KG4VAG

If anyone ever answers you, please forward it to me. I have two FT-10 batteries that don't hold a charge well, and a bunch of brand new AA NiCads that I could repack them with.

Sorry 'bout the mistake, but the frequency should be 3550-3650.
I hate it when that happens.

Thanks for the responses.

I've done this a number of times with dead battery packs
that were glued. The original idea came from someone else
on this newsgroup several years ago.

Put the pack in the freezer overnight. The plastic has
to be cold.

Once cold, take it outside and whack the "seam"
sides on a concrete sidewalk. They will split along
the seams. Once it starts to split, help it along with
a wide screwdriver. Don't pry too hard.

After replacing the cells use model airplane or contact
cement to glue it back. Tip: Use decent quality and
capacity NiMh cells.

Good luck and 73..Jim N2VX

Can any one recommend any software (If there is any) to program the memory channels, freq etc. then download to the radio. I have just purchased this radio and spend over an hour thumbing thru the manual trying to program 1 channel. If all else could you sent KISS instructions how to program the folloing.

Channel Freq. Offset Tone Mode
1 145.330 .600 179.9 FM
2 146.655 .600 FM

Any help is appreciated.

Rudi; the wiring diagram for the 1993 7.3L diesel indicates nothing in the way of electronic injection. There is however a Powertrain Control Module (PCM), that has an engine RPM sensor. Perhaps that sensor is the source of the noise. Look for a sensor with dark green and pink/orange wires on the engine block. You might try a clamp-on type ferrite choke (radio shack) over those leads.

Perhaps the 95 model had electronic injectors if so, the same solution might work on those.

Rudi wrote:

Hi,
I'm looking for a simple and cheap AM radio IC that will handle
tuning and demodulation. Basically, I'd just like to connect it to an
antenna in and an audio out and do tuning digitallly via another
input. I don't care much about sound quality. Does anyone have any
suggestions for an IC I could use?

Thanks,
Aaron Staple

the only thing that will do it is the logging program TRX manager but
its not a shareware or a freeware software
there is no stand alone programming software at all according to RT
Sytems who write the software for all the HTs and mobile radios
good luck

Date: 2003-02-23 12:51:00 UTC
From: Ralph Mowery <rmowery@ctc.net>
Message-ID: <UtqcnQQGAZuOTsWjXTWcpg@ctc.net>
Source record: 33039

It is confusing. There is no known program that will save the memory for
the subaudio tones.

To program a memory chanel.

Step 1:

Press the MENU BUTTON tuil the M2 shows up in the display.

2. Press V/M to put it in the memory mode, If there is no frequency
programmed in the memory chanel the display will mostly blank out.
